consciousness that emphasizes our first person knowledge of experience and argues that we should grant consciousness understood in this way a central place in our conception of mind and intentionality Written in an engaging manner that makes its recently controversial topic accessible to the thoughtful general reader this book challenges theories that equate consciousness with a functional role or with the mere availability of sensory information to cognitive capacities Siewert argues that the notion of phenomenal consciousness slighted in some recent theories can be made evident by noting our reliance on first person knowledge and by considering from the subject's point of view the difference between having and lacking certain kinds of experience This contrast is clarified by careful attention to cases both actual and hypothetical indicated by research on brain damaged patients ability to discriminate visually without conscious visual experience what has become known as blindsight In addition Siewert convincingly defends such approaches against objections that they make an illegitimate appeal to introspection Experiences that are conscious in Siewert's sense differ from each other in ways that only what is conscious can in phenomenal character and having this character gives them intentionality In Siewert's view consciousness is involved not only in the intentionality of sense experience and imagery but in that of nonimagistic ways of thinking as well Consciousness is pervasively bound up with intelligent perception and conceptual thought it is not mere sensation or raw feel Having thus understood consciousness we can better recognize how for many of us it possesses such deep intrinsic value that life without it would be little or no better than death

**Reality and Humean Supervenience** Gerhard Preyer, Frank Siebelt, 2002-07-15 If asked what Humeanism could mean today there is no other philosopher to turn to whose work covers such a wide range of topics from a unified Humean perspective as that of David Lewis The core of Lewis's many contributions to philosophy including his work in philosophical ontology intensional logic and semantics probability and decision theory topics within philosophy of science as well as a distinguished philosophy of mind can be understood as the development of philosophical position that is centered around his conception of Humean supervenience If we accept the thesis that it is physical science and not philosophical reasoning that will eventually arrive at the basic constituents of all matter pertaining to our world then Humean supervenience is the assumption that all truths about our world will supervene on the class of physical truths in the following sense There are no truths in any compartment of our world that cannot be accounted for in terms of differences and similarities among those properties and external space time relations that are fundamental to our world according to physical science
