Cognitive Dynamics Eric Dietrich, Arthur B. Markman, 2014-03-05 Recent work in cognitive science much of it placed in opposition to a computational view of the mind has argued that the concept of representation and theories based on that concept are not sufficient to explain the details of cognitive processing These attacks on representation have focused on the importance of context sensitivity in cognitive processing on the range of individual differences in performance and on the relationship between minds and the bodies and environments in which they exist In each case models based on traditional assumptions about representation have been assumed to be too rigid to account for the effects of these factors on cognitive processing In place of a representational view of mind other formalisms and methodologies such as nonlinear differential equations or dynamical systems and situated robotics have been proposed as better explanatory tools for understanding cognition This book is based on the notion that while new tools and approaches for understanding cognition are valuable representational approaches do not need to be abandoned in the course of constructing new models and explanations Rather models that incorporate representation are quite compatible with the kinds of complex situations being modeled with the

new methods This volume illustrates the power of this explicitly representational approach labeled cognitive dynamics in original essays by prominent researchers in cognitive science Each chapter explores some aspect of the dynamics of cognitive processing while still retaining representations as the centerpiece of the explanations of the key phenomena These chapters serve as an existence proof that representation is not incompatible with the dynamics of cognitive processing The book is divided into sections on foundational issues about the use of representation in cognitive science the dynamics of low level cognitive processes such as visual and auditory perception and simple lexical priming and the dynamics of higher cognitive processes including categorization analogy and decision making

Railway Journal ... ,1905 **Perceptual Learning** Barbara Doshier,Zhong-Lin Lu,2020-10-13 A comprehensive and integrated introduction to the phenomena and theories of perceptual learning focusing on the visual domain Practice or training in perceptual tasks improves the quality of perceptual performance often by a substantial amount This improvement is called perceptual learning in contrast to learning in the cognitive or motor domains and it has become an active area of research of both theoretical and practical significance This book offers a comprehensive introduction to the phenomena and theories of perceptual learning focusing on the visual domain Perceptual Learning explores the tradeoff between the competing goals of system stability and system adaptability signal and noise retuning and reweighting and top down versus bottom down processes It examines and evaluates existing research and potential future directions including evidence from behavior physiology and brain imaging and existing perceptual learning applications with a focus on important theories and computational models It also compares visual learning to learning in other perceptual domains and considers the application of visual training methods in the development of perceptual expertise and education as well as in remediation for limiting visual conditions It provides an integrated treatment of the subject for students and researchers and for practitioners who want to incorporate perceptual learning into their practice Practice or training in perceptual tasks improves the quality of perceptual performance often by a substantial amount This improvement is called perceptual learning in contrast with learning in the cognitive or motor domains Perceptual learning has been a very active area of research of both theoretical and practical interest Research on perceptual learning is of theoretical significance in illuminating plasticity in adult perceptual systems and in understanding the limitations of human information processing and how to improve them It is of practical significance as a potential method for the development of perceptual expertise in the normal population for

its potential in advancing development and supporting healthy aging and for noninvasive amelioration of deficits in challenged populations by training Perceptual learning has become an increasingly important topic in biomedical research Practitioners in this area include science disciplines such as psychology neuroscience computer sciences and optometry and developers in applied areas of learning game design cognitive development and aging and military and biomedical applications Commercial development of training products protocols and games is a multi billion dollar industry Perceptual learning provides the basis for many of the developments in these areas This book is written for anyone who wants to understand the phenomena and theories of perceptual learning or to apply the technology of perceptual learning to the development of training methods and products Our aim is to provide an introduction to those researchers and students just entering this exciting field to provide a comprehensive and integrated treatment of the phenomena and the theories of perceptual learning for active perceptual learning researchers and to describe and develop the basic techniques and principles for readers who want to successfully incorporate perceptual learning into applied developments The book considers the special challenges of perceptual learning that balance the competing goals of system stability and system adaptability It provides a systematic treatment of the major phenomena and models in perceptual learning the determinants of successful learning and of specificity and transfer The book provides a cohesive consideration of the broad range of perceptual learning through the theoretical framework of incremental learning of reweighting evidence that supports successful task performance It provides a detailed analysis of the mechanisms by which perceptual learning improves perceptual limitations the relationship of perceptual learning and the critical period of development and the semi supervised modes of learning that dominate perceptual learning It considers limitations and constraints on learning multiple tasks and stimuli simultaneously the implications of training at high or low levels of performance accuracy and the importance of feedback to perceptual learning The basis of perceptual learning in physiology is discussed along with the relationship of visual perceptual learning to learning in other sensory domains The book considers the applications of perceptual learning in the development of expertise in education and gaming in training during development and aging and applications to remediation of mental health and vision disorders Finally it applies the phenomena and models of perceptual learning to considerations of optimizing training

Learning Strategies and Cultural Evolution during the Palaeolithic Alex Mesoudi, Kenichi Aoki, 2015-04-30 This volume is motivated by the desire to explain why Neanderthals were replaced by modern humans in terms of cultural differences between the two sub species It provides up to date coverage on the theory of cultural evolution as is being used by anthropologists archaeologists biologists and psychologists to decipher hominin cultural change and diversity during the Palaeolithic The contributing authors are directly involved in this effort and the material presented includes novel approaches and findings Chapters explain how learning strategies in combination with social and demographic factors e g population size and mobility patterns

predict cultural evolution in a world without the printing press television or the Internet Also addressed is the inverse problem of how learning strategies may be inferred from actual trajectories of cultural change for example as seen in the North American Palaeolithic Mathematics and statistics a sometimes necessary part of theory are explained in elementary terms where they appear with details relegated to appendices Full citations of the relevant literature will help the reader to further pursue any topic of interest

Ancient Greek Portrait Sculpture Sheila Dillon, 2006-04-24 This book offers a new approach to the history of Greek portraiture by focusing on portraits without names Comprehensively illustrated it brings together a wide range of evidence that has never before been studied as a group Sheila Dillon considers the few original bronze and marble portrait statues preserved from the Classical and Hellenistic periods together with the large number of Greek portraits known only through Roman copies In focusing on a series of images that have previously been ignored Dillon investigates the range of strategies and modes utilized in these portraits to construct their subject's identity Her methods undermine two basic tenets of Greek portraiture first that it was only in the late Hellenistic period under Roman influence that Greek portraits exhibited a wide range of styles including descriptive realism and second that in most cases one can easily tell a subject's public role that is whether he is a philosopher or an orator from the visual traits used in this portrait The sculptures studied here instead show that the proliferation of portrait styles takes place much earlier in the late Classical period and that the identity encoded in these portraits is much more complex and layered than has previously been realized Despite the fact that these portraits lack the one feature most prized by scholars of ancient portraiture a name they are evidence of utmost importance for the history of Greek portraiture
