NEHRP Commentary on the Guidelines for the Seismic Rehabilitation of Buildings Eugene Zeller, 2000-06 This document from the National Earthquake Hazards Reduction Program NEHRP was prepared for the Building Seismic Safety Council BSSC with funding from the Federal Emergency Management Agency FEMA It provides commentary on the NEHRP Guidelines for the Seismic Rehabilitation of Buildings It contains systematic guidance enabling design professionals to formulate effective reliable rehabilitation approaches that will limit the expected earthquake damage to a specified range for a specified level of ground shaking This kind of guidance applicable to all types of existing buildings in all parts of the country has never existed before Illustrated *The Seismic Design Handbook* Farzad Naeim, 2012-12-06 This handbook contains up to date existing structures computer applications and information on planning analysis and design seismic design of wood structures A new and very useful feature of this edition of earthquake resistant building structures Its intention is to provide engineers architects is the inclusion of a companion CD ROM disc developers and students of structural containing the complete digital version of the handbook itself and the following very engineering and architecture with authoritative yet practical design information It represents important publications an attempt to bridge the persisting gap between UBC IBC 1997 2000 Structural advances in the theories and concepts of Comparisons and Cross References ICBO earthquake resistant design and their 2000 implementation in seismic design practice 2 NEHRP Guidelines for the Seismic The distinguished panel of contributors is Rehabilitation of Buildings FEMA 273 Federal Emergency Management Agency composed of 22 experts from industry and universities recognized for their knowledge and 1997 extensive practical experience in their fields 3 NEHRP Commentary on the Guidelines for They have aimed to present clearly and the Seismic Rehabilitation of Buildings FEMA 274 Federal Emergency concisely the basic principles and procedures pertinent to each subject and to illustrate with Management Agency 1997 practical examples the application of these 4 NEHRP Recommended Provisions for principles and procedures in seismic design Seismic Regulations for New Buildings and practice Where applicable the provisions of Older Structures Part 1 Provisions various seismic design standards such as FEMA 302 Federal Emergency 2000 UBC 97 FEMA 273 274 and ATC 40 Management Agency 1997 **Seismic Assessment and Retrofit of Reinforced Concrete Buildings** fib Fédération internationale du béton, 2003-08-01 In most parts of the developed world the building stock and the civil infrastructure are ageing and in constant need of maintenance repair and upgrading Moreover in the light of our current knowledge and of modern codes the majority of buildings stock and other types of structures in many parts of the world are substandard and deficient This is especially so in earthquake prone regions as even there seismic design of structures is relatively recent In those regions the major part of the seismic threat to human life and property comes from old buildings Due to the infrastructure s increasing decay frequently combined with the need for structural upgrading to meet more stringent design requirements especially against seismic loads structural retrofitting is

becoming more and more important and receives today considerable emphasis throughout the world In response to this need a major part of the fib Model Code 2005 currently under development is being devoted to structural conservation and maintenance More importantly in recognition of the importance of the seismic threat arising from existing substandard buildings the first standards for structural upgrading to be promoted by the international engineering community and by regulatory authorities alike are for seismic rehabilitation of buildings This is the case for example of Part 3 Strengthening and Repair of Buildings of Eurocode 8 i e of the draft European Standard for earthquake resistant design and which is the only one among the current 2003 set of 58 Eurocodes attempting to address the problem of structural upgrading It is also the case of the recent 2001 ASCE draft standard on Seismic evaluation of existing buildings and of the 1996 Law for promotion of seismic strengthening of existing reinforced concrete structures in Japan As noted in Chapter 1 of this Bulletin fib as CEB and FIP did before has placed considerable emphasis on assessment and rehabilitation of existing structures The present Bulletin is a culmination of this effort in the special but very important field of seismic assessment and rehabilitation It has been elaborated over a period of 4 years by Task Group 7.1 Assessment and retrofit of existing structures of fib Commission 7 Seismic design a truly international team of experts representing the expertise and experience of all the important seismic regions of the world In the course of its work the team had six plenary two day meetings in January 1999 in Pavia Italy in August 1999 in Raleigh North Carolina in February 2000 in Queenstown New Zealand in July 2000 in Patras Greece in March 2001 in Lausanne Switzerland and in August 2001 in Seattle Washington In October 2002 the final draft of the Bulletin was presented to public during the 1st fib Congress in Osaka It was also there that it was approved by fib Commission 7 Seismic Design The contents is structured into main chapters as follows 1 Introduction 2 Performance objectives and system considerations 3 Review of seismic assessment procedures 4 Strength and deformation capacity of non seismically detailed components 5 Seismic retrofitting techniques 6 Probabilistic concepts and methods 7 Case studies

Integrated Seismic Design of Structure and Control Systems Paolo Castaldo, 2013-11-26 The structural optimization procedure presented in this book makes it possible to achieve seismic protection through integrated structural control system design In particular it is explained how slender structural systems with a high seismic performance can be achieved through inclusion of viscous and viscoelastic dampers as an integral part of the system Readers are provided with essential introductory information on passive structural control and passive energy dissipation systems Dynamic analyses of both single and multiple degree of freedom systems are performed in order to verify the achievement of pre assigned performance targets and it is explained how the optimal integrated design methodology also relevant to retrofitting of existing buildings should be applied The book illustrates how structural control research is opening up new possibilities in structural forms and configurations without compromising structural performance
