Mathematics as a Science of Patterns Michael D. Resnik, 1997-07-31 Mathematics as a Science of Patterns is the definitive exposition of a system of ideas about the nature of mathematics which Michael Resnik has been elaborating for a number of years In calling mathematics a science he implies that it has a factual subject matter and that mathematical knowledge is on a par with other scientific knowledge in calling it a science of patterns he expresses his commitment to a structuralist philosophy of mathematics He links this to a defence of realism about the metaphysics of mathematics the view that mathematics is about things that really exist Resnik's distinctive philosophy of mathematics is here presented in an accessible and systematic form it will be of value not only to specialists in this area but to philosophers mathematicians and logicians interested in the relationship between these three disciplines or in truth realism and epistemology

Alibali,2018-12-17 The book synergizes research on number across two disciplines mathematics education and psychology The underlying problem the book addresses is how the brain constructs number The opening chapter frames

the problem in terms of children's activity including mental and physical actions. Subsequent chapters are organized into sections that address specific domains of number: natural numbers, fractions, and integers. Chapters within each section address ways that children build upon biological primitives (e.g., subitizing) and prior constructs (e.g., counting sequences) to construct number. The book relies on co-authored chapters and commentaries at the end of each section to create dialogue between junior faculty and senior researchers as well as between psychologists and mathematics educators. The final chapter brings this work together around the framework of children's activity and additional themes that arise in the collective work. The book is aimed to appeal to mathematics educators, mathematics teacher educators, mathematics education researchers, educational psychologists, cognitive psychologists, and developmental psychologists.
