Nutrient Cycling and Limitation Peter M. Vitousek, 2018-06-26 The availability or lack of nutrients shapes ecosystems in fundamental ways From forest productivity to soil fertility from the diversity of animals to the composition of microbial communities nutrient cycling and limitation are the basic mechanisms underlying ecosystem ecology In this book Peter Vitousek builds on over twenty years of research in Hawaii i to evaluate the controls and consequences of variation in nutrient availability and limitation Integrating research from geochemistry pedology atmospheric chemistry ecophysiology and ecology Vitousek addresses fundamental questions How do the cycles of different elements interact How do biological processes operating in minutes or hours interact with geochemical processes operating over millions of years How does biological diversity interact with nutrient cycling and limitation in ecosystems The Hawaiian Islands provide the author with an excellent model system for answering these questions as he integrates across levels of biological organization He evaluates the connections between plant nutrient use efficiency nutrient cycling and limitation within ecosystems and nutrient input output budgets of ecosystems This book makes use of the Hawaiian ecosystems to explore the mechanisms that shape productivity and diversity in ecosystems throughout the world It will be essential reading for all ecologists and environmental scientists

Nitrogen Deposition, Critical Loads and Biodiversity Mark A. Sutton, Kate E. Mason, Lucy J. Sheppard, Harald Sverdrup, Richard Haeuber, W. Kevin Hicks, 2014-04-10 This volume brings together extended reviews and papers of new scientific research on atmospheric nitrogen deposition impacts globally While there is a wealth of evidence on the magnitude components and effects of nitrogen disposition on floral biodiversity in Europe and North America there is an obvious lack of information on impacts on above and below ground fauna and all impacts in

other parts of the world with no clear overview of how the different strands of evidence fit together This overall synthesis is targeted at the international conventions but is equally readable for scientists environmental managers conservation agencies and policy makers This timely book highlights the global nitrogen deposition problem Major regions of the world are exceeding sustainability thresholds for adverse effects on ecosystem function and biodiversity This highlights the importance of ongoing work including under the Convention on Biological Diversity in developing indicators and monitoring nitrogen deposition effects to enable appropriate measures This book presents a milestone towards this global goal as the international community works toward meeting the Aichi Biodiversity Targets especially Target 8 By 2020 pollution including from excess nutrients has been brought to levels that are not detrimental to ecosystem function and biodiversity Braulio Ferreira de Souza Dias Executive Secretary Convention on Biological Diversity This key volume highlights the global challenge to reduce atmospheric nitrogen pollution resulting from energy production transport and agricultural activities It takes forward the agenda recently launched in the UNEP commissioned report Our Nutrient World Dr Anjan Datta UNEP
