everything in our power to undermine the earth's functioning we could hardly do a better job than we have in the past thirty years on the world's oceans both by what we are putting into it millions of tons of trash and toxic materials and by what we are taking out of it millions of tons of wildlife Yet only recently have we begun to understand the scale of those impacts Defying Ocean's End is the result of an unprecedented effort among the world's largest environmental organizations scientists the business community media and international governments to address these marine issues In June 2003 in the culmination of a year long effort they met specifically to develop a comprehensive and achievable agenda to reverse the decline in health of the world's oceans As conservation organizations begin to expand their focus from land issues to include a major focus on preservation of the sea it is increasingly apparent that we have to approach marine conservation differently and at much larger scale than we have to date What's also clear is the magnitude and immediacy of the growing ocean concerns are such that no one organization can handle the job alone Defying Ocean's End is a bold step in bringing the resources needed to bear on this vast problem before it is too late It offers a broad strategy a practical plan with priorities and costs aimed at mobilizing the forces needed to bring about a sea change of favorable attitudes actions and outcomes for the oceans and for all of us **The World's Oceans** Rainer F.
