

Problem 6. (Slow variation, regular variation)

a) Show that the following functions are slowly varying at ∞ .

i) $L(x) = 2 + \cos(1/x), x > 0$.

ii) $L(x) = \log x, x > 0$.

iii) $L(x) = 1/\log x, x > 1$.

iv) $L(x) = \tilde{L}(1/x)$ where $\tilde{L} : [0, \infty) \rightarrow [0, \infty)$ is slowly varying at 0.

b) Show that the following functions are regularly varying at ∞ and determine the corresponding index.

i) $h(x) = x^{-\theta}, x > 0, \theta > 0$.

ii) $h(x) = (1+x)^{-\theta}, x > -1, \theta > 0$.

iii) $h(x) = \tilde{h}(1/x), x > 0$, where $\tilde{h}$ is regularly varying at 0 with index $\alpha \in \mathbb{R}$.

Extreme Value Theory for Time Series Thomas Mikosch, Olivier Wintenberger, 2024-08-02 This book deals with extreme value theory for univariate and multivariate time series models characterized by power law tails These include the classical

ARMA models with heavy tailed noise and financial econometrics models such as the GARCH and stochastic volatility models. Rigorous descriptions of power law tails are provided through the concept of regular variation. Several chapters are devoted to the exploration of regularly varying structures. The remaining chapters focus on the impact of heavy tails on time series including the study of extremal cluster phenomena through point process techniques. A major part of the book investigates how extremal dependence alters the limit structure of sample means, maxima, order statistics, sample autocorrelations. This text illuminates the theory through hundreds of examples and as many graphs showcasing its applications to real life financial and simulated data. The book can serve as a text for PhD and Master courses on applied probability, extreme value theory and time series analysis. It is a unique reference source for the heavy tail modeler. Its reference quality is enhanced by an exhaustive bibliography annotated by notes and comments making the book broadly and easily accessible.

Introductory Lectures on Fluctuations of Lévy Processes with Applications Andreas E. Kyprianou, 2006-12-18. This textbook forms the basis of a graduate course on the theory and applications of Lévy processes from the perspective of their path fluctuations. The book aims to be mathematically rigorous while still providing an intuitive feel for underlying principles. The results and applications often focus on the case of Lévy processes with jumps in only one direction for which recent theoretical advances have yielded a higher degree of mathematical transparency and explicitness. *Heavy-Tail Phenomena* Sidney I. Resnick, 2007. This comprehensive text gives an interesting and useful blend of the mathematical probabilistic and statistical tools used in heavy tail analysis. It is uniquely devoted to heavy tails and emphasizes both probability modeling and statistical methods for fitting models. Prerequisites for the reader include a prior course in stochastic processes and probability, some statistical background, some familiarity with time series analysis, and ability to use a statistics package. This work will serve second year graduate students and researchers in the areas of applied mathematics, statistics, operations research, electrical engineering, and economics. *Mathematical Analysis and Applications* Michael Ruzhansky, Hemen Dutta, Ravi P. Agarwal, 2018-04-11. An authoritative text that presents the current problems, theories, and applications of mathematical analysis research. *Mathematical Analysis and Applications: Selected Topics* offers the theories, methods, and applications of a variety of targeted topics including operator theory, approximation theory, fixed point theory, stability theory, minimization problems, many-body wave scattering problems, Basel problem, Corona problem, inequalities, generalized normed spaces, variations of functions and sequences, analytic generalizations of the Catalan, Fuss, and Fuss-Catalan Numbers, asymptotically developable functions, convex functions, Gaussian processes, image analysis, and spectral analysis and spectral synthesis. The authors, a noted team of international researchers in the field, highlight the basic developments for each topic presented and explore the most recent advances made in their area of study. The text is presented in such a way that enables the reader to follow subsequent studies in a burgeoning field of research. This important text presents a wide range of important topics having current research importance and interdisciplinary applications such as game theory, image
