Regulation for Chemical Safety in Europe: Analysis, Comment and Criticism D.M. Pugh,J.V. Tarazona,2013-04-17 Many European Union Directives seek to minimize the potential for harm to humans and the environment arising from the use of chemicals This book takes an interdisciplinary selective look at the effector mechanisms employed in such directives It covers the pre marketing use of toxicology to identify the hazardous properties of chemicals acknowledging its shortcomings while contrasting the scientific method with the precautionary principle in developing risk management practices The book then goes on to describe the use of bio indicators chemical analyses and mathematical modelling for prediction or to determine the adequacy of chemical safety legislation The environmental risk assessment of priority chemicals is described and the impact of pesticides on sustainability in agriculture is discussed from the differing standpoints of agronomy and economics Audience All professionals concerned with the safe management of chemicals and their use including teachers practitioners policy makers or legislators *Regulation for Chemical Safety in Europe: Analysis, Comment and Criticism* D.M. Pugh,J.V. Tarazona,1998-10-31 This text takes an interdisciplinary selective look at the effector mechanisms employed in directives which seek to minimize the potential for harm to humans and the environment arising from the use of chemicals

Handbook of Environmental Economics Karl-Göran Mäler,Jeffrey R. Vincent,2003 The Handbook of Environmental Economics focuses on the economics of environmental externalities and environmental public goods Volume I examines environmental degradation and policy responses from a microeconomic institutional standpoint Its perspective is dynamic including a consideration of the dynamics of natural systems and global with attention paid to issues in both rich and poor nations In addition to chapters on well established topics such as the theory and practice of pollution regulation it includes chapters on new areas of environmental economics research related to common property management regimes population and poverty mechanism design political economy of regulation experimental evaluations of policy instruments and technological change **Handbook of Environmental Economics** Karl-Goran Maler,Jeffrey R. Vincent,2005-12-09 Much applied environmental economics is concerned with the valuation of changes in environmental quality Obtaining reliable valuation estimates requires attention to theoretical and econometric issues that are often quite subtle Volume 2 of the Handbook of Environmental Economics presents both the theory and the practice of environmental valuation It synthesizes the vast literature that has accumulated since the publication of the Handbook of Natural Resource and Energy Economics two decades ago It includes chapters on individual valuation methods written by researchers responsible for fundamental advances in those methods It also includes cross cutting chapters that deal with aspects of welfare theory uncertainty experimental methods and public health that are pertinent to valuation Throughout the volume attention is paid to research and policy issues that arise not only in high income countries where most of the theory and econometrics that underlie applied valuation methods have been developed but also in poorer parts of the world The volume provides a state of the art

Implementing the Environmental Protection Regime for the

Antarctic D. Vidas, 2012-12-06 When the Protocol on Environmental Protection to the Antarctic Treaty entered into force on 14 January 1998 a new phase commenced for the Antarctic Treaty System The parties to the Protocol are today confronting issues related to the implementation of a complex international environmental protection regime both in international and domestic contexts Several crucial implementation questions need to be solved in order to enhance and make possible the implementation of the Protocol What would be the consequences for the parties of a possible failure in resolving the pending implementation issues on what premises can the solutions be based and what then are the options available This book provides a systematic overview of the implementation issues in sections on jurisdiction control and enforcement in the Antarctic Part I institutional support to the implementation of the Protocol Part II normative support to the implementation of the Protocol an Antarctic liability regime Part III relationship with other international instruments and arrangements Part IV and through a series of selected case studies issues involved in domestic implementation of the Protocol Part V This is a book that will appeal to Antarctic specialists and to all those interested in environmental law and policy **Political**

Modernisation and the Environment J. van Tatenhove, B. Arts, P. Leroy, 2013-03-14 Recent years have witnessed a substantial change in both the organisation and substance of environmental policy both national and international Western societies have seen a change in the relationships between the state the market and civil society leading to new conceptions of governance a process here called political modernisation that gives rise to the institutionalisation of new policy arrangements An environmental policy arrangement refers to the organisation and substance of a policy domain in terms of policy coalitions policy discourses rules of the game and resources The book uses these theoretical notions to analyze changes in organisation substance and governance in several environmental policy domains such as infrastructure policies global policies on climate change and biodiversity green planning and agriculture policy Changing relationships between the state the market and civil society caused by processes of globalization privatisation and individualisation have resulted in a plurality of policy arrangements in different domains Despite the fact that environmental politics has been substantially renewed there is a delicate balance between traditional and new policy arrangements One of the main themes of the book is the explanation of this balance **Economics of Climate Change: The Contribution of Forestry Projects** Wolfram Kägi, 2012-12-06

Climate change is one of the major global environmental problems one that has the potential to confront us with great costs during the decades to come Climate change is caused by emissions of greenhouse gases GHGs such as carbon dioxide CO₂ As deforestation leads to CO₂ emissions and growing forests sequester CO₂ forestry projects provide us with options to mitigate CO₂ effects This study analyses the contribution forestry projects can make within the context of climate change The contribution of forestry projects is here discussed on two levels On a first level the CO₂ effect of individual projects is analysed On a second level the study asks whether the analysis of forestry projects can contribute to questions on climate

change which have been discussed in the economic literature during the past two decades While most studies on forestry projects focus on particular details predominantly on technical issues this study takes a rather broad perspective drawing together different relevant aspects the stability of international agreements is discussed costs and benefits of reducing GHG emissions in industrial countries are reviewed the underlying causes of deforestation are analysed and insights from resource economics are taken into consideration Such a wide perspective allows the identification discussion and appreciation of problems and opportunities associated with forestry projects in the context of climate change which are otherwise not recognised

Coercive and Discursive Compliance Mechanisms in the Management of Natural Resources Geir Hønneland, 2000-05-31 This book is the result of more than a decade's preoccupation with the issue of compliance in the Barents Sea fisheries first as an interpreter in the Norwegian Coast Guard then as a graduate student at the University of Tromsø and finally as a PhD student at the University of Oslo and a research fellow at the Fridtjof Nansen Institute FNI Many of those who deserve a thank you in this preface have already been properly thanked on other occasions among them my previous colleagues and superiors in the Norwegian Coast Guard On the present occasion I would particularly like to extend my thanks to the FNI leadership during my time here for giving me the trust and freedom to pursue my enthusiasm Many other colleagues at the institute from both the research and the administrative staff have contributed to the present work For fear of forgetting someone I prefer not to mention names There have to be a few exceptions though From the administration I would particularly like to thank Kari Lorentzen for her professional help in the library and Ann Skarstad and Anne Christine Thestrup for language assistance Thanks to Claes Lykke Ragner for producing the map on page 7 and to Ivar M Liseter for help in the preparation of camera ready copy Among the research staff I would mention my long standing fellow student and colleague both in the Coast Guard and at the FNI Anne Kristin Jørgensen

International Environmental Law and Policy in Africa B. Chaytor, K.R. Gray, 2013-11-11 C O OKID11 I welcome the opportunity to prepare a Foreword to the book on Environmental Policy and Law in Africa edited by Kevin R Gray and Beatrice Chaytor It is a pleasure to do that because the book is a contribution to the cause of capacity building for development and implementation of environmental law in Africa a goal towards which I have had an undivided focus over the last two decades There is still some belief in and outside Africa that for developing countries in general and Africa in particular development and implementation of environmental law is not a priority This belief prevails strongly in many quarters of the industrialised countries In fact the view is held either out of blatant ignorance or by some renegade industrialists who fail to appreciate Michael Royston's 1979 thesis that Pollution Prevention Pays 2 That group for obvious reasons must have their correspondent counterparts in Africa to provide hope that industries rejected as derelict in the West or inoperable due to rigorous environmental regulation can find homes to which they can escape and dump their polluting industries

Hazardous Decisions D. Huitema, 2002-10-31 where Jeremy Richardson Albert Weale and Hugh Ward were excellent hosts at the Department of Government and Thomas Christiansen a

very good roommate Having included the UK as a country where decision processes were far less participatory and thus worse in my own view than those in the Netherlands I started doing my first interviews there which were mainly intended to identify suitable case studies for research But then I read a highly critical review of a book that had a similar topic as my study The critique was that cases of hazardous waste siting cannot adequately be studied without understanding their national context This made me decide to devote some attention to the legal context of hazardous waste siting in the three countries of interest which is of course only a part of the national context and its development through the years The study of the UK system of environmental regulation and land use planning was not a simple issue and I was warned various times for instance by Andrew Blowers at the Open University that the legislation was highly complex and easily misinterpreted I felt personally touched by such warnings and decided that I should perhaps approach the UK system a bit less as an evil empire and maybe be a bit more objective in my appraisals
