Reinventing Darwin The Great Debate At The High Table Of Evolutionary Theory:

Reinventing Darwin Niles Eldredge,1995-04-17 According to the paleontologists this pattern shows that evolution is driven far more by environmental forces than by genetic competition **Gaither's Dictionary of Scientific Quotations** Carl C. Gaither,Alma E. Cavazos-Gaither,2012-01-05 This unprecedented collection of 27 000 quotations is the most comprehensive and carefully researched of its kind covering all fields of science and mathematics With this vast compendium you can readily conceptualize and embrace the written images of scientists laymen politicians novelists playwrights and poets about humankind s scientific achievements Approximately 9000 high quality entries have been added to this new edition to provide a rich selection of quotations for the student the educator and the scientist who would like to introduce a presentation with a relevant quotation that provides perspective and historical background on his subject Gaither s Dictionary of Scientific Quotations Second Edition provides the finest reference source of science quotations for all audiences The new edition adds greater depth to the number of quotations in the various thematic arrangements and also provides new thematic categories **No Other Gods** Robert Karl Gnuse,1997-05-01 This is the first full scale assessment of the theological social and ideational implications of our new understandings of ancient Israel s social and religious development Scholars now stress the gradual emergence of Israel out of the culture of ancient Palestine and the surrounding ancient Near East rather than contrast Israel with the ancient world Our new paradigms stress the ongoing and unfinished nature of the monotheistic revolution which is indeed still in process today Gnuse takes a further bold step in setting the emergence of monotheism in a wider intellectual context he argues brilliantly that the interpretation of Israel s development as both an evolutionary and revolutionary process corresponds to categories of contemporary evolutionary thought in the biological and palaeontological sciences Punctuated Equilibrium Handbook of Evolutionary Research in Archaeology Anna Marie Prentiss,2019-06-03 Evolutionary Research in Archaeology seeks to provide a comprehensive overview of contemporary evolutionary research in archaeology The book will provide a single source for introduction and overview of basic and advanced evolutionary concepts and research programs in archaeology Content will be organized around four areas of critical research including microevolutionary and macroevolutionary process human ecology studies evolutionary ecology demography and niche construction and evolutionary cognitive archaeology Authors of individual chapters will address theoretical foundations history of research contemporary contributions and debates and implications for the future for their respective topics As appropriate authors present or discuss short empirical case studies to illustrate key arguments

Global Dawn Frank Ninkovich,2009-10-15 Why did the United States become a global power Frank Ninkovich shows that a cultural predisposition for thinking in global terms blossomed in the late nineteenth century making possible the rise to world power as American liberals of the time took a wide ranging interest in the world At the center of their attention was the historical process they called civilization whose most prominent features a global economy political democracy and a

global culture anticipated what would later come to be known as globalization. The continued spread of civilization they believed provided the answer to worrisome contemporary problems such as the faltering progress of democracy, a burgeoning arms race in Europe and a dangerous imperialist competition. In addition to transforming international politics, a global civilization quickened by commercial and cultural exchanges would advance human equality and introduce the modern industrial way of life to traditional societies. Consistent with their universalist outlook, liberal internationalists also took issue with scientific racism by refusing to acknowledge racial hierarchy as a permanent feature of relations with nonwhite peoples. Of little practical significance during a period when isolationism reigned supreme in U.S. foreign policy, this rich body of thought would become the cultural foundation of twentieth-century American internationalism.

Dawkins' God Alister E. McGrath, 2015-01-20 A fully updated new edition of a critically acclaimed examination of the theories and writings of Richard Dawkins by a world renowned expert on the relation of science and religion. Includes in depth analysis of Dawkins landmark treatise *The God Delusion* 2006 as well as coverage of his later popular works *The Magic of Reality* 2011 and *The Greatest Show on Earth* 2011 and a new chapter on Dawkins as a popularizer of science. Tackles Dawkins hostile and controversial views on religion and examines the religious implications of his scientific ideas including a comprehensive investigation of the selfish gene. Written in an accessible and engaging style that will appeal to anyone interested in better understanding the interplay between science and religion.

The Morals of Life Davide Tarizzo, 2024-08-06 A theory of biopolitical power that updates Foucault illustrating the moral implications of modern evolutionary theory. In our day the individual has become a life, the singular of the plural noun population. From this new understanding of what it means to be human comes a new form of biopolitical power with a new set of moral rules. In *The Morals of Life* moral philosopher Davide Tarizzo presents a theoretical framework for understanding this transformation of the old fashioned government of living beings as Michel Foucault characterized biopolitics into a new government of modular living beings as well as a template for making sense of biopolitical power that operates on the scale of populations rather than individuals. Tarizzo traces population thinking, the notion of modular optimization and other conceptual keystones of the current biopolitical regime, an ethopolitical regime in the author's terms, to their origins in twentieth-century biological thought more precisely and critically: evolutionary theory, Neo-Darwinism. Tarizzo argues should be seen not only as a scientific paradigm but also as a philosophy per se because it is evolutionary theory that today provides an answer to the old philosophical question: What is man? This new kind of philosophy, his book suggests, largely determines the way in which people look at themselves and society. Not only does it contribute to designing new technologies of power but it also fosters subjection to the new ethopolitical regime.

The Major Metaphors of Evolution Salvatore J. Agosta, Daniel R. Brooks, 2020-08-29 This book presents a unified evolutionary framework based on three sets of metaphors that will help to consolidate discussions on evolutionary transitions. Evolution is the unifying principle of life, making identifying ways to apply evolutionary principles to tackle existence threatening crises such as climate change.

crucial A more cohesive evolutionary framework will further the discussions in this regard and also accelerate the process itself This book lays out a framework based on three dualistic classes of metaphors time space and conflict resolution Evolutionary transitions theory shows how metaphors can help us understand selective diversification as Darwin described with his tree of life Moreover the recently proposed Stockholm paradigm demonstrates how metaphors can help shed light on the emergence of complex ecosystems that Darwin highlighted with his tangled bank metaphor Taken together these ideas offer proactive measures for coping with existential crises for humanity such as climate change The book will appeal to biologists philosophers and historians alike

Macroevolution in Human Prehistory Anna Prentiss,Ian Kuijt,James C. Chatters,2009-09-18 Cultural evolution much like general evolution works from the assumption that cultures are descendent from much earlier ancestors Human culture manifests itself in forms ranging from the small bands of hunters through intermediate scale complex hunter gatherers and farmers to the high density urban settlements and complex polities that characterize much of today s world The chapters in the volume examine the dynamic interaction between the micro and macro scales of cultural evolution developing a theoretical approach to the archaeological record that has been termed evolutionary processual archaeology The contributions in this volume integrate positive elements of both evolutionary and processualist schools of thought The approach as explicated by the contributors in this work offers novel insights into topics that include the emergence stasis collapse and extinction of cultural patterns and development of social inequalities Consequently these contributions form a stepping off point for a significant new range of cultural evolutionary studies
