Reinventing Biology:

Reinventing Biology Lynda I. A. Birke, Ruth Hubbard, 1995 Much more than a book about animal welfare it explores how the scientific questions and answers would be different if biology operated from a paradigm of respect for the objects of study Thirteen contributions are arranged in four distinct sections individual topics vary extensively but each is first rate Choice Ruth Hubbard and Lynda Birke have asked an important question how would the practices of biology change if organisms were considered subjects with agency They have gathered an array of excellent scholars and a broad spectrum of perspectives this is a fresh and important question Londa Schiebinger Essays explore how the practice of biology could change if scientists treated the organisms they use in their experiments respectfully what it means to raise animals or plants as experimental resources what guides decisions about which animals to breed for experimental purposes *Reinventing the Sacred* Stuart A Kauffman, 2008-01-10 Consider the woven integrated complexity of a living cell after 3 8 billion years of evolution Is it more awe inspiring to suppose that a transcendent God fashioned the cell or to consider that the living organism was created by the evolving biosphere As the eminent complexity theorist Stuart Kauffman explains in this ambitious and groundbreaking new book people who do not believe in God have largely lost their sense of the sacred and the deep human legitimacy of our inherited spirituality For those who believe in a Creator God no science will ever disprove that belief In Reinventing the Sacred Kauffman argues that the science of complexity provides a way to move beyond reductionist science to something new a unified culture where we see God in the creativity of the universe biosphere and humanity Kauffman explains that the ceaseless natural creativity of the world can be a profound source of meaning wonder and further grounding of our place in the universe His theory carries with it a new ethic for an emerging civilization and a reinterpretation of the divine He asserts that we are impelled by the imperative of life itself to live with faith and courage and the fact that we do so is indeed sublime Reinventing the Sacred will change the way we all think about the evolution of humanity the universe faith and reason *Routledge International Encyclopedia of Women* Cheris Kramarae, Dale Spender, 2004-04-16 For a full list of entries and contributors sample entries and more visit the Routledge International Encyclopedia of Women website Featuring comprehensive global coverage of women s issues and concerns from violence and sexuality to feminist theory the Routledge International Encyclopedia of Women brings the field into the new millennium In over 900 signed A Z entries from US and Europe Asia the Americas Oceania and the Middle East the women who pioneered the field from its inception collaborate with the new scholars who are shaping the future of women s studies to create the new standard work for anyone who needs information on women related subjects **The Gender and Science Reader** Muriel Lederman, Ingrid Bartsch, 2001 The Gender and Science Reader brings together key articles in a comprehensive investigations of the nature and practice of science **Re-Inventing Organic Metaphors for the Social Sciences** Marc Antoine Campill, 2023-04-25 The Re Inventing Organic Metaphors for the Social Sciences is a volume with the

specific goal to challenge psychological understandings by connecting psychological approaches with multidimensional perspectives of various other scientific streams meanwhile imbedding the generated knowledge in metaphors that allows researchers to follow phenomena into a deeper and more w holistic understanding of its appearance This is particularly important when the humankind faces challenges due to systemic biological changes as the phenomenological dynamics bonded to those challenges can be conserved in appropriated context For this purpose the organic metaphors are introduced A tool that has central advantage over mechanical metaphors as it can capture the complex and open systemic nature of biological psychological and social phenomena For example the widely used notion mind as a computer may be more productively replaced by mind as a membrane with implications e g focus on borders in between or in systems in themselves exosystemic realities in our world There are many other fertile opportunities not yet explored in the realms of psychology and other sciences Furthermore the contributors operated also as cross reviewers for each other s In this occasion a new dimension in chapter construction will be introduced Beside the traditional reviewing of another paper the reviewer has been asked to add a small list of extending questions toward the reviewed paper These added questions have been introduced as potential questions that the authors were demanded to add into a final sub chapter of their contribution The subchapter has been titled as Dialogue the author was free to select between the questions and ideas on those they believe could inhabit an especially worth for the future readers

Feminist Amnesia Jean Curthoys, 2003-05-20 Feminist Amnesia is an important challenge to contemporary academic feminism Jean Curthoys argues that the intellectual decline of university arts education and the loss of a deep moral commitment in feminism are related phenomena The contradiction set up by the radical ideas of the 1960s and institutionalised life of many of its protagonists in the academy has produced a special kind of intellectual distortion This book criticises current trends in feminist theory from the perspective of forgotten and allegedly outdated feminist ideas Jean Curthoys show that much contemporary feminist theory like much of today s radical thought is muddled The forgotten theory of Women s Liberation was she argues deeply oppositional and moral The repression of this theory has led to distortions most notably in the preoccupation with binary oppositions Jean Curthoys argues that where Women s Liberation was once radical much of contemporary feminist thought hides behind obscurantism and has become conservative and orthodox These controversial ideas will be keenly debated by all those involved in womens s studies feminist theory and moral philosophy

Gender and Boyle's Law of Gases Elizabeth Potter, 2001-04-22 Gender and Boyle s Law of Gases Elizabeth Potter Re examines the assumptions and experimental evidence behind Boyle s Law Boyle s Law which describes the relation between the pressure and volume of a gas was worked out by Robert Boyle in the mid 1600s His experiments are still considered examples of good scientific work and continue to be studied along with their historical and intellectual contexts by philosophers historians and sociologists Now there is controversy over whether Boyle s work was based only on experimental evidence or whether it was influenced by the politics and religious controversies of the time including

especially class and gender politics Elizabeth Potter argues that even good science is sometimes influenced by such issues and she shows that the work leading to the Gas Law while certainly based on physical evidence was also shaped by class and gendered considerations At issue were two descriptions of nature each supporting radically different visions of class and gender arrangements Boyle s Law rested on mechanistic principles but Potter shows us an alternative law based on hylozoic principles the belief that all matter is animated whose adherents challenged social stability and the status quo in 17th century England Elizabeth Potter Alice Andrews Quigley Professor of Women s Studies at Mills College is co editor of *Feminist Epistemologies* and author of numerous articles on feminist epistemology and feminist philosophy of science *Race Gender and Science* Anne Fausto Sterling general editor June 2001 232 pages 5 figs 6 x 9 index cloth 0 253 33916 2 34 95 L 26 50 paper 0 253 21455 6 17 95 s 13 95 Toward a Global Science Susantha Goonatilake,1998 Asian science such as mathematics Chinese printing gunpowder and the compass all contributed to the development of European science During the last few centuries however scientific contributions with Asian roots have diminished and been marginalized and delegitimised Yet the center of the world economy today is shifting to Asia with shifts in science and technology bound to follow *Toward a Global Science* is driven by the proposition that pre Renaissance acquisition of Asian knowledge did not exhaust Asian civilization s potential contribution There are many useful elements to modern science still lying hidden in Asian civilizational stores waiting to be mined The author gives details of recent contributions from South Asian medicine mathematics and psychology and explores how South Asian inputs can be useful in navigating the philosophical and ethical problems raised by two dominant technologies of the future namely biotechnology and information technology As an illustrative example it describes how a fruitful marriage of one technology virtual reality with South Asian philosophy can enliven both the technology as well as philosophy It also examines how Asian positions could be used to feed some key contemporary philosophical discussions on science Using a model of the civilizational construction of science the book views science without Eurocentric blinders It documents how science was built initially by transfers from non European civilizations and why the given historiography of science has to be rethought Throughout the book the author gives examples of parallels and antecedents between East and West in science and estimates the potential reservoir of Asian knowledge in each field The book also deals with the many knotty problems in recovering science from past traditions The author distinguishes between his secular efforts from religious and other attempts that claim the equivalence of all knowledge systems *Molecular Feminisms* Deboleena Roy,2018-11-10 Should feminists clone What do neurons think about How can we learn from bacterial writing These provocative questions have haunted neuroscientist and molecular biologist Deboleena Roy since her early days of research when she was conducting experiments on an in vitro cell line using molecular biology techniques An expert natural scientist as well as an intrepid feminist theorist Roy takes seriously the expressive capabilities of biological objects such as bacteria and other human nonhuman organic and inorganic actants in order to better

understand processes of becoming She also suggests that renewed interest in matter and materiality in feminist theory must be accompanied by new feminist approaches that work with the everyday nitty gritty research methods and techniques in the natural sciences By practicing science as feminism at the lab bench Roy creates an interdisciplinary conversation between molecular biology Deleuzian philosophies science and technology studies feminist theory posthumanism and postcolonial and decolonial studies In *Molecular Feminisms* she brings insights from feminist and cultural theory together with lessons learned from the capabilities and techniques of bacteria subcloning and synthetic biology to offer tools for how we might approach nature anew In the process she demonstrates that learning how to see the world around us is also always about learning how to encounter that world

Leonardo's Choice Carol Gigliotti, 2009-09-18 *Leonardo's Choice* Genetic Technologies and Animals is an edited collection of twelve essays and one dialogue focusing on the profound affect the use of animals in biotechnology is having on both humans and other species Communicating crucial understandings of the integrated nature of the human and non human world these essays unlike the majority of discussions of biotechnology take seriously the impact of these technologies on animals themselves This collection's central questions revolve around the disassociation Western ideas of creative freedom have from the impacts those ideas and practices have on the non human world This transdisciplinary collection includes perspectives from the disciplines of philosophy cultural theory art and literary theory history and theory of science environmental studies law landscape architecture history and geography Included authors span three continents and four countries Included essays contribute significantly to a growing scholarship surrounding the question of the animal emanating from philosophical cultural and activist discourses Its authors are at the forefront of the growing number of theorists and practitioners across the disciplines concerned with the impact of new technologies on the more than human world

Environmental Culture Val Plumwood, 2005-09-15 In this much needed account of what has gone wrong in our thinking about the environment Val Plumwood digs at the roots of environmental degradation She argues that we need to see nature as an end itself rather than an instrument to get what we want Using a range of examples Plumwood presents a radically new picture of how our culture must change to accommodate nature

Feminism and the Biological Body Lynda Birke, 2019-06-01 Biological bodies always seem to drop out of debates about the body and its importance in western culture They are assumed to be fixed their workings irrelevant to theory This text argues that these views of biology do not serve feminist politics well

Why Animal Experimentation Matters Ellen Frankel Paul, Jeffrey Paul, Animal experimentation has made a crucial contribution to many of the most important advances in modern medicine The development of vaccines for deadly viruses like rabies and yellow fever depended upon animal research and much of our basic knowledge about human health and physiology was discovered through the use of animals as well In spite of these gains animal rights activists have been zealous in communicating to the public and policymakers their view that the use of animals in medical research is morally wrong and should be severely curtailed or eliminated The activists arguments

draw upon a range of disciplines and focus on both practical and ethical aspects of animal experimentation. Advocates of animal experimentation have been slow to respond to these arguments. Given that the worldwide toll of communicable diseases is still immense and that deadly new pathogens may emerge at any time in the future to menace human health, failing to defend animal experimentation from the arguments of its opponents has disastrous implications. A quick response to an unanticipated threat on the order of the AIDS epidemic is unimaginable absent a vigorous research establishment which in turn is dependent on animal proxies. *Why Animal Experimentation Matters* is a first attempt by research scientists and moral philosophers to mount a convincing defense against animal rights enthusiasts. Because opponents of animal experimentation come from a variety of intellectual backgrounds, this defense is necessarily interdisciplinary as well. In this collection of eight essays, the authors scrutinize how animal experimentation actually functions in the laboratory, the vital role that it plays in palliating and eradicating human and animal diseases, and the moral justification for sacrificing animals for the betterment of human life. The subjects covered in the essays include the moral status of animals and persons, the importance of animals for advancing scientific knowledge, the history of animal experimentation and of its detractors, differing theoretical approaches of American and European animal experimentation, regulations, the heavily restrictive legislation promoted by animal rights activists, and the threats posed to research and researchers by violent animal rights zealots. Contributors include Baruch Brody, H. Tristram Englehardt Jr., R. G. Frey, Kenneth F. Kiple, and Kriemhild Cone Ornelas. Adrian R. Morrison, Charles S. Nicoll, and Sharon M. Russell. Jerrold Tannenbaum and Stuart M. Zola. This important anthology will be of interest to scientists, philosophers, individuals suffering from heritable or communicable diseases, relatives of afflicted individuals, and policymakers. Ellen Frankel Paul is deputy director of the Social Philosophy and Policy Center, professor of political science and philosophy at Bowling Green State University, and editor in chief of the journal *Social Philosophy*; both are professors of philosophy at Bowling Green State University.

Just Methods Alison M. Jaggar, 2015-11-17. The supplemented edition of this important reader includes a substantive new introduction by the author on the changing nature of feminist methodology. It takes into account the implications of a major new study included for the first time in this book on poverty and gender in equality, and it includes an article discussing the ways in which this study was conducted using the research methods put forward by the first edition. This article begins by explaining why a new and better poverty metric is needed and why developing such a metric requires an alternative methodological approach inspired by feminism. Feminist research is a growing tradition of inquiry that aims to produce knowledge not biased by inequitable assumptions about gender and related categories such as class, race, religion, sexuality, and nationality. *Just Methods* is designed for upper-level undergraduate and graduate students in a range of disciplines. Rather than being concerned with particular techniques of inquiry, the interdisciplinary readings in this book address broad questions of research methodology. They are designed to help researchers think critically and constructively about the epistemological and ethical implications of various approaches.

to research selection and research design evidence gathering techniques and publication of results A key theme running through the readings is the complex interrelationship between social power and inequality on the one hand and the production of knowledge on the other A second and related theme is the inseparability of research projects and methodologies from ethical and political values

Theorising Modernity Martin O'Brien, Sue Penna, Colin Hay, 2014-07-10

What is modernity Do we all experience modernity in the same way How should we understand contemporary social change This volume explores questions of modernity through critical engagements with the work of Anthony Giddens focusing in particular on the relationships between his social theory and political sociology Three substantive areas reflexivity environment and identity are examined theoretically through the relationships between reflexivity and rationality life politics and institutional power and universalism and difference As well as specifically addressing Giddens reconstruction of sociology the contributors also explore a wide variety of critical issues currently occupying centre stage in social theory These include questions about the character of contemporary societies the periodisation of social change the processes of change by which societies are constantly made and remade by people the relationships between the social and the natural the formation and maintenance of identities and matters of epistemology and methodology in social science Theorising Modernity will be of interest to undergraduate and postgraduate students of sociology modern political thought social geography and social policy and to social scientists trying to make sense of the modernity debate Martin O'Brien is Research at the University of Derby Sue Penna is a Lecturer in Applied Social Science at Lancaster University Colin Hay is a Lecturer in the Department of Political Science and International Studies at the University of Birmingham UK a Visiting Fellow of the Department of Political Science at the Massachusetts Institute of Technology US and Research Affiliate of the Centre for European Studies at Harvard University US

Animals and Women Carol J. Adams, Josephine Donovan, 1995-11-14

Animals and Women is a collection of pioneering essays that explores the theoretical connections between feminism and animal defense Offering a feminist perspective on the status of animals this unique volume argues persuasively that both the social construction and oppressions of women are inextricably connected to the ways in which we comprehend and abuse other species Furthermore it demonstrates that such a focus does not distract from the struggle for women's rights but rather contributes to it This wide ranging multidisciplinary anthology presents original material from scholars in a variety of fields as well as a rare early article by Virginia Woolf Exploring the leading edge of the species gender boundary it addresses such issues as the relationship between abortion rights and animal rights the connection between woman battering and animal abuse and the speciesist basis for much sexist language Also considered are the ways in which animals have been regarded by science literature and the environmentalist movement A striking meditation on women and wolves is presented as is an examination of sexual harassment and the taxonomy of hunters and hunting Finally this compelling collection suggests that the subordination and degradation of women is a prototype for other forms of abuse and that to deny this

connection is to participate in the continued mistreatment of animals and women

Robots, Reasoning, and Reification James P. Gunderson, Louise F. Gunderson, 2008-12-17 This work was created from the statement But all you have to do is make the robot recognize its surroundings Salamanders do it and how complex are they Little did we know what a long path was started with those simple words This book is a small step on that path which we hope leads to robots that can serve as true and useful assistants to humans At the least we hope for some help with the tasks that are described by the 3 d words dull dirty or dangerous Fair warning this work is a synthesis of ideas from many disciplines As such we have depended on the work of many other researchers and philosophers The heart of this work the lens model comes from the work of Egon Brunswik Even though he died in the 1950 s his ideas are still strong enough to resonate into the 2000 s and into our robot Another researcher who s work has greatly influenced this work is Walter Freeman Professor Emeritus of Neurobiology at the University of California Berkeley We have relied heavily on his work on preafference and attention to guide the development of our robot In addition we have used research from a myriad of different fields Our huge thanks to all the researchers who s work we used to synthesize this new theory Denver CO Louise F Gunderson July 2008 James P
