Clément Vidal

Relatively Speaking Relativity Black Holes And The Fate Of The Universe:

Relatively Speaking Eric Chaisson, Lola Judith Chaisson, 1990 Beginning with a clear nontechnical discussion of both the special and general theories of relativity astrophysicist Chaisson explores their theoretical and experimental bases and what these say about the origin and structure of the universe Library Journal Photographs and drawings *Relatively Speaking*

Eric Chaisson, 1990 **Prisons of Light** Kitty Ferguson, 2013-01-31 What is a black hole Could we survive a visit to one Perhaps even venture inside What would we find Have we yet discovered any real black holes And what do black holes teach us about what physicist John Archibald Wheeler called the deep happy mysteries of the universe These are just a few of the tantalizing questions examined in this jargon free review of one of the most fascinating topics in modern science In search of the answers we trace a star from its birth to its death throes take a fabulous hypothetical journey to the border of a black hole and beyond spend time with some of the world s leading theoretical physicists and observational astronomers scanning the cosmos for evidence of real black holes and take a whimsical look at some of the wild ideas black holes have inspired

Economics, Philosophy, and Physics Ching-Yao Hsieh, Meng-Hua Ye, 1991 Cover Half Title Title Copyright Dedication Contents List of Figures Acknowledgments Introduction The Classical Greek World View Philosophy Science Economics The World View of Saint Thomas Aquinas St Thomas s Philosophy The Scholastic Approach to Science St Thomas s Economics The Disintegration of the Medieval World View Chapter 1 Newtonian Physics Philosophy and Economics Newton s Grand Synthesis Newton s Influence on the Enlightenment The Newtonian Heritage of Contemporary Economics Reductionism Linearity **Routledge Library Editions: Philosophy of Time** Various Authors, 2021-03-05 Reissuing five works originally published between 1937 and 1991 this collection contains books addressing the subject of time from a mostly philosophic point of view but also of interest to those in the science and mathematics worlds These texts are brought back into print in this small set of works addressing how we think about time the history of the philosophy of time the measurement of time theories of relativity and discussions of the wider thinking about time and space among other aspects One volume is a thorough bibliography collating references on the subject of time across many disciplines

Science, Religion, and Mormon Cosmology Erich Robert Paul, 1992 Merrill who urged a unique vision of reality that shaped a Mormon eschatology He shows how authorities eventually retreated from the perception of reality as true and adopted a scientifically less secure position in order to protect their theology an eventuality which ultimately resulted in a reactionary response to science within Mormonism The Beginning and the End Clément Vidal, 2014-05-16 In this fascinating journey to the edge of science Vidal takes on big philosophical questions Does our universe have a beginning and an end or is it cyclic Are we alone in the universe What is the role of intelligent life if any in cosmic evolution Grounded in science and committed to philosophical rigor this book presents an evolutionary worldview where the rise of intelligent life is not an accident but may well be the key to unlocking the universe s deepest mysteries Vidal shows how the fine tuning controversy can be advanced with computer

simulations He also explores whether natural or artificial selection could hold on a cosmic scale In perhaps his boldest hypothesis he argues that signs of advanced extraterrestrial civilizations are already present in our astrophysical data His conclusions invite us to see the meaning of life evolution and intelligence from a novel cosmological framework that should stir debate for years to come

Einstein Denis Brian,1997-08-21 Blends the brilliance of the scientific genius with the compassion playfulness and wit of the private figure A fascinating read with more interesting material about Einstein as a human being than I have ever seen before Robert Jastrow astrophysicist and bestselling author A thoughtful and captivating account of one whom I had the joy of knowing and loving George Wald Nobel Prize Laureate His face is one of the most recognized on the planet His very name is synonymous with genius Yet for all the attention and countless biographies our images of Albert Einstein rarely go beyond the eccentric and larger than life scientist unraveling one cosmic mystery after another In this engaging popular biography Denis Brian draws on a wealth of new information recently opened to the public to bring us a broader more authentic portrait of Einstein than previously available The first full scale Einstein life published in 20 years it is also the first to integrate Einstein s genius with his private and public life to give us a complete impression of the real person We meet an Einstein with a gift for friendship a romantic with a roving eye for women We confront a man whose countless scientific triumphs were tempered by tragic ironies in his personal life We encounter Einstein the humanist who showed compassion for the children of others yet neglected his own sons We learn from his former assistants how they revered Einstein how he worked at his science and of his warm relationships with other physicists Based on information drawn from new access to the Einstein archives as well as exclusive interviews with colleagues and friends Einstein A Life reveals an endearing and sensitive man but one slightly detached from even those closest to him as if he inhabited his own world of lofty thoughts and cosmic dreams DENIS BRIAN West Palm Beach Florida is the author of *The True Gen An Intimate Portrait of Hemingway by Those Who Knew Him* and *Genius Talk Conversations with Nobel Scientists and Other Luminaries*

Lifting the Scientific Veil Paul Sukys,1999 Lifting the Scientific Veil has been written to afford the nonscience student the same meaningful opportunity to explore germane scientific topics as is generally given the science student to learn about the humanities and social sciences Since nonscientists are generally responsible for making laws financing research or at the very least for voting it is essential that they understand the significant impact that science has on everyday life The book is designed to introduce nonscientists in an

informative and comprehensible manner to four of the most significant scientific theories of the twentieth century the big bang quantum physics relativity and evolution After each theory is explained informally the book shows how that theory and related technology impact upon one's personal life Legal and political aspects of these theories are explored as well as philosophical and theological implications
