

DEVELOPING ASSESSMENT RELIABILITY AND VALIDITY: ITEM ANALYSIS

Readily available analysis techniques allow us to obtain sophisticated item analysis data for music items

Item Response Theory models should become the standard analysis approach

3 parameter models for dichotomous items which measure difficulty and discrimination while controlling for guessing

Polytomous generalized rating scale models extend IRT theory to the analysis of rubric-based assessments (i.e. Samejima's graded response model)

Easy software programs such as XCalibre4™ make these complex calculations accessible

Reliability and Validity Assessment Edward G. Carmines, Richard A. Zeller, 1979-11-01 This guide demonstrates how social scientists assess the reliability and validity of empirical measurements This monograph is a good starting point for those who want to familiarize themselves with the current debates over appropriate measurement designs and strategies

Parliament. House of Commons. Children, Schools and Families Committee, 2008 A certain amount of national testing at key points in a child's school career is necessary in order to provide a standardised means of measuring educational attainment But in recent years the Government has emphasised central control of the education system through testing and associated targets and performance tables placing test results in a new and more complex context with wide ranging consequences National test results are used for a wide variety of purposes across many different levels national local institutional and individual Is the current national testing system a valid means by which to achieve these purposes The Committee concludes that in some cases it is not In particular the use of national test results for the purpose of school accountability has resulted in some schools emphasising the maximisation of test results at the expense of a more rounded education for their pupils A variety of classroom practices aimed at improving test results has distorted the education of some children which may leave them unprepared for higher education and employment Teaching to the test and narrowing of the taught curriculum are widespread phenomena in schools resulting in a disproportionate focus on the core subjects of English mathematics and science The Government's proposals for the new single level tests and the new emphasis on the personalised approach to learning may have some positive effects But there is a need for structural modification of the current approach The Committee concludes that the national testing system should be reformed to decouple these multiple purposes in such a way as to remove from schools the

imperative to pursue test results at all costs On the 14 19 diplomas the Committee notes that teachers feel unprepared for the new qualifications and there is anxiety about the limited amount of training they are due to receive

Validity and Inter-Rater Reliability Testing of Quality Assessment Instruments U. S. Department of Health and Human Services,Agency for Healthcare Research and Quality,2013-04-09 The internal validity of a study reflects the extent to which the design and conduct of the study have prevented bias es One of the key steps in a systematic review is assessment of a study s internal validity or potential for bias This assessment serves to 1 identify the strengths and limitations of the included studies 2 investigate and potentially explain heterogeneity in findings across different studies included in a systematic review and 3 grade the strength of evidence for a given question The risk of bias assessment directly informs one of four key domains considered when assessing the strength of evidence With the increase in the number of published systematic reviews and development of systematic review methodology over the past 15 years close attention has been paid to the methods for assessing internal validity Until recently this has been referred to as quality assessment or assessment of methodological quality In this context quality refers to the confidence that the trial design conduct and analysis has minimized or avoided biases in its treatment comparisons To facilitate the assessment of methodological quality a plethora of tools has emerged Some of these tools were developed for specific study designs e g randomized controlled trials RCTs cohort studies case control studies while others were intended to be applied to a range of designs The tools often incorporate characteristics that may be associated with bias however many tools also contain elements related to reporting e g was the study population described and design e g was a sample size calculation performed that are not related to bias The Cochrane Collaboration recently developed a tool to assess the potential risk of bias in RCTs The Risk of Bias ROB tool was developed to address some of the shortcomings of existing quality assessment instruments including over reliance on reporting rather than methods Several systematic reviews have catalogued and critiqued the numerous tools available to assess methodological quality or risk of bias of primary studies In summary few existing tools have undergone extensive inter rater reliability or validity testing Moreover the focus of much of the tool development or

testing that has been done has been on criterion or face validity Therefore it is unknown whether or to what extent the summary assessments based on these tools differentiate between studies with biased and unbiased results i e studies that may over or underestimate treatment effects There is a clear need for inter rater reliability testing of different tools in order to enhance consistency in their application and interpretation across different systematic reviews Further validity testing is essential to ensure that the tools being used can identify studies with biased results Finally there is a need to determine inter rater reliability and validity in order to support the uptake and use of individual tools that are recommended by the systematic review community and specifically the ROB tool within the Evidence based Practice Center EPC Program In this project we focused on two tools that are commonly used in systematic reviews The Cochrane ROB tool was designed for RCTs and is the instrument recommended by The Cochrane Collaboration for use in systematic reviews of RCTs The Newcastle Ottawa Scale is commonly used for nonrandomized studies specifically cohort and case control studies

Clinical Assessment of Child and Adolescent Personality and Behavior Paul J. Frick, Christopher T. Barry, Randy W. Kamphaus, 2009-12-12 Psychologists offer an increasing variety of services to the public Among these services psychological assessment of personality and behavior continues to be a central activity One main reason is that other mental health professionals often do not possess a high level of competence in this area And when dealing with children and adolescents psychological assessment seems to take on an even greater role Therefore it follows that comprehensive graduate level instruction in assessment should be a high priority for educators of psychologists who will work with these youth This textbook is organized into three sections consistent with the authors approach to teaching Part I provides students with the psychological knowledge base necessary for modern assessment practice including historical perspectives measurement science child psychopathology ethical legal and cultural issues and the basics of beginning the assessment process Part II gives students a broad review of the specific assessment methods used by psychologists accompanied by specific advice regarding the usage and strengths and weaknesses of each method In Part III we help students perform some of the most sophisticated of assessment practices integrating and communicating assessment results and infusing assessment practice with knowledge of child development and psychopathology to assess some of the most common types of behavioral and emotional disorders in youth A text focusing on assessment practices must be updated every four to six years to keep pace with advances in test development For example

several of the major tests reviewed in the text such as the Behavioral Assessment System for Children and the Child Behavior Checklist have undergone major revisions since the publication of the last edition making the current content outdated. Further, another major test the Conners Rating Scales is undergoing substantial revisions that should be completed before publication of the next edition. Finally, the evidence for the validity of the tests and the recommendations for their appropriate use evolve as research accumulates and requires frequent updating to remain current. For example, there was a special issue of the Journal of Clinical Child and Adolescent Psychology published focusing on evidenced-based assessment of the major forms of childhood psychopathology that will need to be integrated into the chapters in Part 3. This latter point reflects an important trend in the field that should influence the marketing of the book. That is, there are several initiatives being started in all of the major areas of applied psychology e.g. school clinical and counseling to promote evidenced-based assessment practices. These initiatives have all emphasized the need to enhance the training of graduate students in this approach to assessment. This has been the orientation of this textbook from its first edition that is Clinical Assessment of Child and Adolescent Personality and Behavior has focused on using research to guide all recommendations for practice. The ability of the textbook to meet this training need should be an important focus of marketing the book to training programs across all areas of applied psychology.
