Technology and Safety of Marine Systems J. Wang,2003-07-22

Traditionally society has regulated hazardous industries by detailed references to engineering codes standards and hardware requirements These days a risk based approach is adopted Risk analysis involves identifying hazards categorizing the risks and providing the necessary decision support to determine the necessary arrangements and measures to reach a safe yet economical operating level When adopting such an approach the abundance of techniques available to express risk levels can often prove confusing and inadequate This highly practical guide to safety and risk analysis in Marine Systems not only adds to the current techniques available but more importantly identifies instances where traditional techniques fall short Uncertainties that manifest within risk analysis are highlighted and alternative solutions presented In addition to risk analysis techniques this book addresses influencing elements including reliability Maintenance Decision making and Human error The highly practical approach of this title ensures it is accessible to the widest possible audience

Soft Computing for Risk Evaluation and Management Da Ruan,Mario Fedrizzi,2012-08-10 Risk is a crucial element in virtually all problems people in diverse areas face in their activities It is impossible to find adequate models and solutions without taking it into account Due to uncertainty and complexity in those problems traditional hard tools and techniques may be insufficient for their formulation and solution This is the first book in the literature that shows how soft computing methods fuzzy logic neural networks genetic algorithms etc can be employed to deal with various problems related to risk analysis evaluation and management in various fields of technology environment and finance

The Handbook of Reliability, Maintenance, and System Safety

through Mathematical Modeling Amit Kumar, Mangey Ram, 2021-01-09 The Handbook of Reliability Maintenance and System Safety through Mathematical Modeling discusses the many factors affect reliability and performance including engineering design materials manufacturing operations maintenance and many more Reliability is one of the fundamental criteria in engineering systems design with maintenance serving as a way to support reliability throughout a system s life Addressing these issues requires information modeling analysis and testing Different techniques are proposed and implemented to help readers analyze various behavior measures in terms of the functioning and performance of systems Enables mathematicians to convert any process or system into a model that can be analyzed through a specific technique Examines reliability and mathematical modeling in a variety of disciplines unlike competitors which typically examine only one Includes a table of contents with simple to complex examples starting with basic models and then refining modeling approaches step by step The Multi-Criteria Approach for Decision Support Lotfi Azzabi, Dorra Azzabi, Abdessamad Kobi, 2020-09-11 This book presents the multi criteria approach to decision support as well as the various multi criteria tools to help avoid multi objective optimization The book is intended as a tool for understanding the multi criteria tools for decision support and modeling in mathematical programming It helps to structure models to easily model complex constraints to have a basic modeling guide for any multi criteria system and to better understand models already existing in the literature The book is structured in the same order as components of the methodology established in a multi criteria optimization problem It introduces the elements of the actors the decision making activity under criteria calculations specifications and objective criterion Process Management in Design and Construction Rachel Cooper, Ghassan Aouad, Angela Lee, Song Wu, Andrew Fleming, Michail Kagioglou, 2008-04-15 To deliver a construction project on time at cost and of appropriate quality it is critical to manage the design and construction process effectively This book provides a comprehensive introduction to the field of process management in design and construction in order to meet the business needs of the construction industry as they change in today s highly competitive global environment It identifies the current state of the industry in the process management field describing trends and developments including information technology and demonstrates these through case study evidence Practical guidance is offered by identifying potential pitfalls illustrating best practise drawn from construction and appropriate manufacturing applications The overall approach is a holistic one based on practical experience gained throughout the past decade both in the academic and industrial environments including leading a number of research projects on process and IT related topics in construction and manufacturing industries Process Management in Design and Construction will provide students on construction and project management related courses with a description of the state of process management in design and construction including current process models as well as a future vision based on up to date research findings and good practice in the construction industry The book also offers practical guidance to industrial and consultancy organisations on undertaking and implementing process management projects including re engineering

Data Uncertainty and Important Measures Christophe Simon, Philippe Weber, Mohamed Sallak, 2018-01-19 The first part of the book defines the concept of uncertainties and the mathematical frameworks that will be used for uncertainty modeling The application to system reliability assessment illustrates the concept In the second part evidential networks as a new tool to model uncertainty in reliability and risk analysis is proposed and described Then it is applied on SIS performance assessment and in risk analysis of a heat sink In the third part Bayesian and evidential networks are used to deal with important measures evaluation in the context of uncertainties
