Renal Ion Channels Function And Regulation:

Renal Ion Channels R. V. Thakker, 2000-01-01 Due to the combined approach of molecular biology and physiology knowledge of the mechanisms underlying the aetiology of many renal tubular disorders has seen important advances in recent years The publication at hand provides a succinct and readable overview of the progress made in the understanding of transepithelial sodium transport and transcellular water transport as well as discussing the essential role of the cystic fibrosis transmembrane conductance regulator CFTR in epithelial electrolyte transport Moreover novel insights into renal calcium transport gained from an analysis of channels and the likely roles of the recently discovered family of renal voltage gated chloride channels are reviewed together with the molecular characteristics of phosphate transporters and their roles in the regulation of this anion Due to the multidisciplinary approach adopted this publication will be a most welcome source of up to date information for nephrologists endocrinologists geneticists and physiologists alike moreover it also provides possible points for future research *Ion Channels and Transporters of Epithelia in Health and Disease* Kirk L.

Hamilton, Daniel C Devor, 2015-12-14 This book sheds new light on the physiology molecular biology and pathophysiology of epithelial ion channels and transporters It combines the basic cellular models and functions by means of a compelling clinical perspective addressing aspects from the laboratory bench to the bedside The individual chapters written by leading scientists and clinicians explore specific ion channels and transporters located in the epithelial tissues of the kidney intestine pancreas and respiratory tract all of which play a crucial part in maintaining homeostasis Further topics include the fundamentals of epithelial transport mathematical modeling of ion transport cell volume regulation membrane protein folding and trafficking transepithelial transport functions and lastly a discussion of transport proteins as potential pharmacological targets with a focus on the pharmacology of potassium channels **Biomedical Index to PHS-supported Research**, 1987
