Second Aspen Winter Particle Physics Conference:

Second Aspen Winter Particle Physics Conference Loyal Durand, 1987-01-01 *Physics Briefs*, 1989 **Charm Physics**
Minghan Ye, Tao Huang, 1988 *B Physics And Cp Violation: Proceedings Of The 2nd International Conference* Thomas E
Browder, Frederick A Harris, Sandip Pakvasa, 1998-04-04 CP violation is one of the most subtle effects in the Standard Model
of particle physics and may be the first clue to the physics that lies beyond Charge conjugation C and parity P are symmetries
of particle interactions C corresponds to the operation of replacing a particle by its antiparticle while P is the operation of
mirror reflection Before 1956 it was believed that these were also symmetries of the interactions of elementary particles In
1956 C S Wu found evidence for P violation in the weak interaction Theorists proposed that the combination of CP would be a
symmetry of the weak interaction In 1964 Christenson Cronin Fitch and Turlay found the first evidence for the violation of CP
symmetry in the decays of kaons Although Kobayashi and Maskawa then showed how the Standard Model can accommodate
the observed CP violation Wolfenstein pointed out that it is also possible that there is a new interaction in addition to the
usual four called the superweak interaction which is responsible for the asymmetry To test this idea the observation of a
different type of asymmetry called direct CP violation is required in the kaon sector very precise measurements of the ratio of
kaon decay rates are necessary In B decay modes where a second order weak process whimsically named penguin interferes
with another suppressed first order tree amplitude it may also be possible to observe these direct CP violating effects B
physics and CP violation is now one of the major growth areas in high energy physics Nearly every major high energy physics
laboratory now has a project underway to observe the large CP asymmetries expected in the B sector and to test the
consistency of the Standard Model The unitarity of the Kobayashi Maskawa mixing matrix in the Standard Model implies the
existence of three phases called alpha beta and gamma which can be determined by the measurements of CP asymmetries in
B decays About 200 participants gathered in Hawaii in March 1997 to discuss the progress in the field and this important
