[Magic in Theory](#) Peter Lamont, Professor Richard Wiseman, 2005-10-28 A useful manual for any magician or curious spectator who wonders why the tricks seem so real this guide examines the psychological aspects of a magician's work Exploring the ways in which human psychology plays into the methods of conjuring rather than focusing on the

individual tricks alone this explanation of the general principles of magic includes chapters on the use of misdirection sleight of hand and reconstruction provides a better understanding of this ancient art and offers a section on psychics that warns of their deceptive magic skills *Hugard's Magic Monthly* ,1960 *Coin Magic* John Wood,2018-07-15 Whether in the movies or in person many people have seen someone perform the classic magic trick of pulling a coin out from behind another person's ear However that's not the only trick magicians perform using coins Readers of this innovative book learn all about coin tricks and their place in the mysterious world of magic Engaging text is supported with colorful images that hold readers' attention This exciting volume is a fun way for young readers and aspiring magicians alike to learn about this high interest topic **Close-Up Magic Secrets** Diamond Jim Tyler,Robert Zafran,Sue Coffman,Kathy Tyler,Jon Racherbaumer,Jeff Davis,2010-12-16 A professional performer presents tricks for magicians at every level of skill especially novices Intended for performances in bars restaurants and other close up venues these 29 routines include original tricks as well as tried and true crowd pleasers Over 300 photographs illustrate clear instructions for illusions involving cards money fire mind reading and comedy **The Magical World of Slydini** Tony Slydini,Karl Fulves,1979 **Diary of a Blind Magician** Gary Haun,2010-09-13 In this book Gary reveals how magic has helped him overcome his limitations As a blind magician Gary explains what he has had to do to perform magic He discusses the techniques and methods that have enabled him to become one of the world's finest blind magicians In *Diary of a Blind Magician* Gary shares his passion for magic with you He not only gives you some very interesting information about magic he actually teaches you how to perform some easy to do magic tricks *Cigarette Magic of Slydini* Ferri D. Angelo,2019 **The Vanished Man** Jeffery Deaver,2012-08-28 Forensic criminologist Lincoln Rhyme and his partner Amelia Sachs are pitted against an unstoppable invisible killer As the fatalities rise and the minutes tick down they must move beyond the smoke and mirrors to prevent a terrifying act of vengeance that could become the greatest vanishing act of all **The Psychology of Magic and the Magic of Psychology** Amir Raz,Jay A. Olson,Gustav Kuhn,2016-11-18 Magicians have dazzled audiences for many centuries however few researchers have studied how let alone why most tricks work The psychology of magic is a nascent field of research that examines the underlying mechanisms that conjurers use to achieve enchanting phenomena including sensory illusions misdirection of attention and the appearance of mind control and nuanced persuasion Most studies to date have focused on either the psychological principles involved in watching and performing magic or neuromagic the neural correlates of such phenomena Whereas performers sometimes question the contributions that modern science may offer to the advancement of the magical arts the history of magic reveals that scientific discovery often charts new territories for magicians In this research topic we sketch out the symbiotic relationship between psychological science and the art of magic On the one hand magic can inform psychology with particular benefits for the cognitive social developmental and transcultural components of behavioural science Magicians have a large and robust set of effects that most researchers rarely exploit Incorporating these effects into

existing experimental even clinical paradigms paves the road to innovative trajectories in the study of human behaviour For example magic provides an elegant way to study the behaviour of participants who may believe they had made choices that they actually did not make Moreover magic fosters a more ecological approach to experimentation whereby scientists can probe participants in more natural environments compared to the traditional lab based settings Examining how magicians consistently influence spectators for example can elucidate important aspects in the study of persuasion trust decision making and even processes spanning authorship and agency Magic thus offers a largely underused armamentarium for the behavioural scientist and clinician On the other hand psychological science can advance the art of magic The psychology of deception a relatively understudied field explores the intentional creation of false beliefs and how people often go wrong Understanding how to methodically exploit the tenuous twilight zone of human vulnerabilities perceptual logical emotional and temporal becomes all the more revealing when top down influences including expectation symbolic thinking and framing join the fray Over the years science has permitted magicians to concoct increasingly effective routines and to elicit heightened feelings of wonder from audiences Furthermore on occasion science leads to the creation of novel effects or the refinement of existing ones based on systematic methods For example by simulating a specific card routine using a series of computer stimuli researchers have decomposed the effect and reconstructed it into a more effective routine Other magic effects depend on meaningful psychological knowledge such as which type of information is difficult to retain or what changes capture attention Behavioural scientists measure and study these factors By combining analytical findings with performer intuitions psychological science begets effective magic Whereas science strives on parsimony and independent replication of results magic thrives on reproducing the same effect with multiple methods to obscure parsimony and minimise detection This Research Topic explores the seemingly orthogonal approaches of scientists and magicians by highlighting the crosstalk as well as rapprochement between psychological science and the art of deception **Big Book of Magic Tricks**

Karl Fulves, 2012-07-13 The best book yet on easy to do magic Martin Gardner Amaze friends astonish your family and fascinate any audience by infallibly dealing a royal flush correctly predicting the outcome of the World Series unmasking a psychic fraud and performing a host of other dazzling deceptions You can do it with the help of this book one of the best guides to magic tricks that don't require long hours of practice or elaborate preparation You'll find invaluable techniques clearly demonstrated with abundant illustrations for accomplishing magical feats with cards coins rope comedy magic mental displays of dexterity and much more as well as expert advice for practicing psychological misdirection and dramatic presentation Although the tricks in this book require little in the way of props sleight of hand or a high degree of skill the effects they produce are astounding Novices especially will find Big Book of Magic Tricks a wonderful introduction to the art of conjuring but the book is crammed with so much choice new information that even professional magicians can learn something This book is quality the tricks are effective the methods ingenious and the advice Fulves gives on presenting the

tricks properly is excellent Robert Dike Blair *Experiencing the Impossible* Gustav Kuhn, 2019-03-12 This thought provoking tour through the science of magic will make you question what you know about your brain and your reality A psychologist and magician shows how the scientific study of magic reveals intriguing and often unsettling insights into the mysteries of the human mind What do we see when we watch a magician pull a rabbit out of a hat or read a person's mind We are captivated by an illusion we applaud the fact that we have been fooled Why do we enjoy experiencing what seems clearly impossible or at least beyond our powers of explanation In *Experiencing the Impossible* Gustav Kuhn examines the psychological processes that underpin our experience of magic Kuhn a psychologist and a magician reveals the intriguing and often unsettling insights into the human mind that the scientific study of magic provides Magic Kuhn explains creates a cognitive conflict between what we believe to be true for example a rabbit could not be in that hat and what we experience a rabbit has just come out of that hat Drawing on the latest psychological neurological and philosophical research he suggests that misdirection is at the heart of all magic tricks and he offers a scientific theory of misdirection He explores among other topics our propensity for magical thinking the malleability of our perceptual experiences forgetting and misremembering free will and mind control and how magic is applied outside entertainment the use of illusion in human computer interaction politics warfare and elsewhere We may be surprised to learn how little of the world we actually perceive how little we can trust what we see and remember and how little we are in charge of our thoughts and actions Exploring magic Kuhn illuminates the complex and almost magical mechanisms underlying our daily activities **Handbook of American Popular Culture** M. Thomas Inge, 1978 Library has Volumes 1 and 2 *Magic and Showmanship* Henning Nelms, 2012-04-30 Highly instructive book by a noted authority on the subject analyzes every phase of conjuring from sleights devices misdirection and controlling audience attention to incorporating patter and the effective use of assistants *Magic as a Performing Art* Robert Gill, 1976
