Numerical Computation Of Electric And Magnetic Fields:

Numerical Computation of Electric and Magnetic Fields Charles W. Steele, 2012-12-06 Since the first edition of this book was published in 1987 there have been several important changes in the state of numerical field computation as discussed in the Introduction These changes have motivated the publication of this second edition As with the first edition the objective of this second edition is to give the newcomer to field computation the information needed to perform practical field computations Again clarity of presentation is given greater emphasis than a high degree of sophistication or the state of the art And again the basic concepts of field computation are presented as well as the commonly used algorithms Several persons have provided much valuable information for this second edition I wish to thank Professor Giorgio Molinari of the University of Genoa Italy for advice regarding adaptive mesh generation Dr C R E Emson of Vector Fields Ltd England and Dr John Brauer of McNeal Schwendler Corp for their advice on transient eddy current computation and Dr Zoltan Cendes of Ansoft Corp for information about their adaptive mesh generator Again I would like to acknowledge the support for this second edition by my wife Candace Again I could not have written this book without her support

Electromagnetic Field Computation by Network Methods Leopold B. Felsen, Mauro Mongiardo, Peter Russer, 2009-03-05 In this monograph the authors propose a systematic and rigorous treatment of electromagnetic field representations in complex structures The architecture suggested in this book accommodates use of different numerical methods as well as alternative Green's function representations in each of the subdomains resulting from a partitioning of the overall problem The subdomains are regions of space where electromagnetic energy is stored and are described in terms of equivalent circuit representations based either on lumped element circuits or on transmission lines Connection networks connect the subcircuits representing the subdomains The connection networks are lossless don't store energy and represent the overall problem topology This is similar to what is done in circuit theory and permits a phrasing of the solution of EM field problems in complex structures by Network oriented methods **Electromagnetic Field, Health and Environment** Andrzej Krawczyk, 2008 Electromagnetic Field Health and Environment mirrors the image of the EHE 07 conference which attracted people investigating the phenomenon of interaction of electromagnetic field and biological objects This book tries to enlighten the problem with the use of scientifically founded facts kept within methodological discipline The particular targets of the book can be briefly summarized as reviewing presenting and discussing innovations in computer modeling measurement and simulation of bioelectromagnetic phenomena analyzing physical and biological aspects of bioelectromagnetic phenomena and discussing environmental safety and policy issues as well as relevant international standards The book is divided into five chapters of which the first three chapters deal with the electromagnetic field in combination with environment health and biology respectively The fourth chapter focuses on computer simulation in bioelectromagnetics whereas the fifth chapter sees to the electromagnetic field in policy and standards An additional three contributions are included the first contribution shows the brief essay on Heinrich Rudolf Hertz in which the occasion of his birth 150 years ago is celebrated The second summarizes the long lasting research in magnetic stimulation and bioimaging and the third one considers some theoretical aspects of electromagnetic field *Electromagnetic Fields in Electrical Engineering* Andrzej Krawczyk, S.
