**Numerical Boundary Value ODEs** Ascher, Russell, 2012-12-06 In the past few years knowledge about methods for the numerical solution of two point boundary value problems has increased significantly Important theoretical and practical advances have been made in a number of fronts although they are not adequately described in any text currently available With this in mind we organized an international workshop devoted solely to this topic The workshop took place in Vancouver B C Canada in July 13 1984 This volume contains the refereed proceedings of the workshop Contributions to the workshop were in two formats There were a small number of invited talks ten of which are presented in this proceedings the other contributions were in the form of poster sessions for which there was no parallel activity in the workshop We had attempted to cover a number of topics and objectives in the talks As a result the general reviewers of O'Malley and Russell are intended to take a broader perspective while the other papers are more specific The contributions in this volume are divided somewhat arbitrarily into five groups The first group concerns fundamental issues like conditioning and decoupling which have only recently gained a proper appreciation of their centrality Understanding of certain aspects of shooting methods ties in with these fundamental concepts The papers of Russell, de Hoog and Matthijs all deal with these issues

Numerical Calculations for Process Engineering Using Excel VBA Chi M. Phan, 2023-12-01 Numerical Calculations for Process Engineering Using Excel VBA provides numerical treatment of process engineering problems with VBA programming and Excel spreadsheets The problems are solving material and energy balances optimising reactors and modelling multiple factor processes The book includes both basic and advanced codes for numerical calculations The basic methods are presented in different variations tailored to particular applications Some macros are combined with each other to solve

engineering problems Examples include combining the bisection method and binary search to optimise an implicit correlation combining golden section search with Euler's method to optimise a reactor and combining bisection code and Euler's method to solve steady state heat distribution The text also includes nonconventional examples such as harmony search and network analysis The examples include solutions to common engineering problems such as adiabatic flame temperature plug flow reactor conversion batch reactor heat diffusion and pinch analysis of heat exchanger networks The VBA code is presented with mathematical equations and flowcharts enabling the audience to adopt the solutions to different problems The book contains many demonstrations of numerical techniques to guide users It also includes useful summaries of VBA commands functions and Excel predefined functions accessible in VBA While the book is developed primarily for undergraduate students the book is a helpful resource for postgraduate students and engineers

*Numerical Solution of Boundary Value Problems for Ordinary Differential Equations* Uri M. Ascher, Robert M. M. Mattheij, Robert D. Russell, 1988-01-01 This book is the most comprehensive up to date account of the popular numerical methods for solving boundary value problems in ordinary differential equations It aims at a thorough understanding of the field by giving an in depth analysis of the numerical methods by using decoupling principles Numerous exercises and real world examples are used throughout to demonstrate the methods and the theory Although first published in 1988 this republication remains the most comprehensive theoretical coverage of the subject matter not available elsewhere in one volume Many problems arising in a wide variety of application areas give rise to mathematical models which form boundary value problems for ordinary differential equations These problems rarely have a closed form solution and computer simulation is typically used to obtain their approximate solution This book discusses methods to carry out such computer simulations in a robust efficient and reliable manner
