Cycles in Humans and Nature John T. Burns, 1994 This volume is the first bibliography to be published on the broad subject of cycles in humans and nature The importance of cycles as a model for understanding the world is as old as the Bible and other ancient records of past civilizations The modern investigation of diverse fields of study has resulted in the concept of cycles once again gaining center stage as an interdisciplinary model for reaching a better understanding of the nature of our universe Major categories of cycles covered in this bibliography are Astrophysics Atmospheric Science Biology Botany Geoscience Medicine Social Science Zoology and Interdisciplinary Over 600 sources of information on thousands of cycles are carefully reviewed to enable the reader maximum access to the most substantive evidence for cycles in each field A balance of general readings as well as more technical articles is maintained throughout the bibliography An introduction provides an overview of the broad spectrum of information on cycles indicating those areas of controversy as well as of agreement The claims of cycles in social unrest economics and climatology are noted as well as the more well known cycles in biology physiology and medicine The volume has an extensive table of contents to facilitate the location of many subcategories of cycles An extensive index also enables the location of citations for specific researchers and for numerous subjects

Past Climates Leona Marshall Libby, 2014-11-11 Leona Marshall Libby was a pioneer in modern climatic research a field that gained great impetus in the late twentieth century because of the promise it holds for predicting future climatic trends Libby's work led to remarkable new procedures for investigating long term changes in precipitation and temperature and thereby greatly expanding our knowledge of past climates As Professor Rainer Berger writes in his foreword In recent years tree ring based temperature data have been collected which go far beyond the records available to historians These data can be analyzed by Fourier transforms which identify certain periodicities Climatic changes detected by tree rings have been checked against historic records The correspondence is astonishing At present weather forecasting is becoming more accurate for periods on the order of days weeks and months Climatic prognoses have also been attempted for very long times of tens of thousands of years But the intermediate range in the decades and centuries has so far been an enigma It is here where tree ring thermometry plays its trump cards Its potential is enormous in assessing worldwide crop yields water inventory heating requirements stockpiling policies and construction planning as well as political and military prospects

Price Trends of Royal Tribute Commodities in Nueva Galicia Woodrow Borah, 1992 Royal treasury records of annual auctions of Indian tributes are the best source of price history for sixteenth century Nueva Galicia Using this data the author has determined that from 1557 to 1598 the prices of some commodities such as maize rose more sharply than in the neighboring Audiencia of Mexico whereas other prices such as those for wheat fell The prices in the great mining center of Zacatecas especially differed from those in both Guadalajara and Mexico City *Tendencias de precios de bienes de tributo real en la Nueva Galicia, 1557-1598* Woodrow Wilson Borah, 1994

Climate Change and the Future of

Democracy R. S. Deese, 2018-09-10 This book will survey past and present efforts to democratize international institutions and will advance the argument that a new degree of transparency and accountability on a global scale is necessary to address the threat of climate change The volume will analyse how global governance could become more democratic and consequently more responsive to the challenge of climate change As economic globalization has accelerated since 1945 international institutions have done a remarkable job in facilitating global communication and commerce but have been far less effective in protecting the global commons
