New Risks: Issues and Management Louis A. Cox, Paolo F. Ricci, 2013-06-29 This volume contains the proceedings of the 1986 annual meeting and conference of the Society for Risk Analysis It provides a detailed view of both mature disciplines and emerging areas within the fields of health safety and environmental risk analysis as they existed in 1986 In selecting and organizing topics for this conference we sought both i to identify and include new ideas and application areas that would be of lasting interest to risk analysts and to users of risk analysis results and ii to include innovative methods and applications in established areas of risk analysis In the three years since the conference many of the topics presented there for the first time to a broad risk analysis audience have become well developed and sometimes hotly debated areas of applied risk research Several such as the public health hazards from indoor air pollutants radon in the home high voltage electric fields and the AIDS epidemic have been the subjects of headlines since 1986 Older areas such as hazardous waste site ranking and remediation air emissions dispersion modeling and exposure assessment transportation safety seismic and nuclear risk assessment and occupational safety in the chemical industry have continued to receive new treatments and to benefit from advances in quantitative risk assessment methods as documented in the theoretical and methodological papers in this volume A theme of the meeting was the importance of new technologies and the new and uncertain risks that they create

Effective Environmental Regulation David P. Angel, Halina Szejnwald Brown, Patrick G. Derr, 2000-07-30 Challenging views prevalent among Western and Polish

scholars this book explains Poland's surprising success in developing effective environmental and occupational regulatory systems while achieving remarkable socioeconomic growth despite the toxic legacy of the Communist era. It offers rich insights into the questions of how one can achieve both economic growth and improved environmental and safety protection and of the extent to which regulatory systems can be transferred across national and cultural boundaries. The authors develop a theoretical framework for assessing regulatory success then use it to analyze Poland's recent experience. Grounded in five case studies of recently privatized firms, the analysis also presents a new survey of privately owned firms, extensive policy and data analysis, and interviews with key policy leaders, entrepreneurs, and intellectuals. The book points to case-specific decision making and information richness as key dimensions of an effective regulatory system and considers in depth the extent to which information richness is culturally dependent and hence its portability as a policy tool. Addressing regulatory issues that are specific to both the United States and the international development community, the book makes a significant contribution to advancing the theoretical and conceptual frameworks used to explain the success or lack of success of regulatory systems.

Risk in Social Science, 2006-10-05 This book is designed as an introduction to recent social science work on risk and is intended primarily for students in sociology, social psychology, and psychology, although it will also be useful for those studying political science, government, public policy, and economics. It is written by leading experts actively involved in research in the field. The book discusses the basic issues in risk research, paying attention to the contributions from different academic disciplines and reviewing debates in the recent literature. It then moves on to examine work on risk across the main areas of activity, discussing recent research and identifying the themes that are currently subject to debate. The areas covered in substantive chapters are Crime, the Environment, Everyday Life, Family, Health, Life Course, Youth, and Old Age, Risk Regulation and Management, Social Inequality, covering gender, ethnicity, disability, and social class, Media, Social and Public Policy, as well as theoretical foundations and current issues in research.

Applied Toxicology: Approaches Through Basic Science Jürg P. Seiler, Eugenio Vilanova, 2012-12-06 Ultraviolet radiation, a component of sunlight, has been recognized by photobiologists, dermatologists, and ophthalmologists as a potential hazard for human health because of its genotoxic, carcinogenic, and immunotoxic properties. Its effects on human health include the induction of skin cancers, ocular damage, and impairment of immunity to certain infections. A few decades ago it was demonstrated that UV photons can affect the activity of the immune system through interactions with the skin. This means that UV not only changes normal cells into cancer cells but also permits the outgrowth of the UV-transformed cells by depressing the immune system. An intriguing question is what interactions between UV radiation and the skin initiate alterations in immune function in the exposed skin and systemically, i.e., in other places than the exposed skin. During the last 20 years, many studies have been performed in order to investigate the immunosuppressive activities of UVB in laboratory animals and in human volunteers. In particular, effects of UVB radiation on resistance to tumours and skin-associated infections have been examined. In addition, effects of

UVB radiation on immune parameters such as contact hypersensitivity and delayed type hypersensitivity both type IV hypersensitivity reactions mixed lymphocyte reactions mixed skin lymphocyte reactions antigen presentation and numbers and function of Langerhans cells have been studied intensively The antigenicity of murine tumours which are caused by UVB radiation was one of the first items to be investigated Kripke 1974 Risk Management of Chemicals M. L. Richardson, 2014-03-14 This volume of proceedings reviews the status of risks entailed in the manufacture handling use and disposal of the chemicals on which we all depend and suggests further action for the protection of both the workplace and the natural environment **Routledge Handbook of Risk Studies** Adam Burgess, Alberto Alemanno, Jens Zinn, 2016-03-31 It is over 40 years since we began to reflect upon risk in a more social than technological and economic fashion firstly making sense of the gap between expert and public assessment of risks such as to our health and environment With fixed certainties of the past eroded and the technological leaps of big data ours is truly an age of risk uncertainty and probability from Google's algorithms to the daily management of personal lifestyle risks Academic reflection and research has kept pace with these dizzying developments but remains an intellectually fragmented field shaped by professional imperatives and disciplinary boundaries from risk analysis to regulation and social research This is the first attempt to draw together and define risk studies through a definitive collection written by the leading scholars in the field It will be an indispensable resource for the many scholars students and professionals engaging with risk but lacking a resource to draw it all together
