Rolph,2000-05-19 A critical yet constructive description of the rich analytical techniques and substantive applications that typify how statistical thinking has been applied at the RAND Corporation over the past two decades Case studies of public policy problems are useful for teaching because they are familiar almost everyone knows something about health insurance global warming and capital punishment to name but a few of the applications covered in this casebook Each case study has a common format that describes the policy questions the statistical questions and the successful and the unsuccessful analytic strategies Readers should be familiar with basic statistical concepts including sampling and regression While designed for statistics courses in areas ranging from economics to health policy to the law at both the advanced undergraduate and graduate levels empirical researchers and policy makers will also find this casebook informative *Explanatory Item*

Response Models Paul de Boeck,Mark Wilson,2013-03-09 This edited volume gives a new and integrated introduction to item response models predominantly used in measurement applications in psychology education and other social science areas from the viewpoint of the statistical theory of generalized linear and nonlinear mixed models Moreover this new framework allows the domain of item response models to be coordinated and broadened to emphasize their explanatory uses beyond their standard descriptive uses The basic explanatory principle is that item responses can be modeled as a function of predictors of various kinds The predictors can be characteristics of items of persons and of combinations of persons and

items they can be b observed or latent of either items or persons and they can be c latent continuous or latent categorical Thus a broad range of models can be generated including a wide range of extant item response models as well as some new ones Within this range models with explanatory predictors are given special attention but we also discuss descriptive models Note that the item responses that we are referring to are not just the traditional test data but are broadly conceived as categorical data from a repeated observations design Hence data from studies with repeated observations experimental designs or with longitudinal designs may also be modeled The intended audience for this volume is rather broad

Rich Democracies, Poor People David Brady, 2009-08-13 Poverty is not simply the result of an individual's characteristics behaviors or abilities Rather as David Brady demonstrates poverty is the result of politics In Rich Democracies Poor People Brady investigates why poverty is so entrenched in some affluent democracies whereas it is a solvable problem in others Drawing on over thirty years of data from eighteen countries Brady argues that cross national and historical variations in poverty are principally driven by differences in the generosity of the welfare state An explicit challenge to mainstream views of poverty as an inescapable outcome of individual failings or a society's labor markets and demography this book offers institutionalized power relations theory as an alternative explanation
