

Release isolation

Release isolation introduces one or more **release** branches from **main**, enabling concurrent release management, multiple and parallel releases, and accurate snapshots of your codebase at release time.

When your codebase has the first release candidate or the release is ready to be locked down, it might be a good time to create a new branch for the release.

Never forward integrate (FI) from **main** and lock release branches using access permissions, to prevent unintended modifications to a **release**. Patches and hot fixes made to the **release** branch can be reverse integrated (RI) back to the **main** branch.
