

Validity

A number of different questions can be asked about qualitative and quantitative research. Some examples are:

Qualitative Research	Quantitative Research
Quality of the Research - Has the research been conducted in a rigorous way? - sampling, open ended questions - Maximise benefits of engaging actively with participants. - Researcher is part of knowledge production - analysis, interpretation, analysis	Objectivity - Has all or as much bias/error as possible been accounted for? - Eliminating influence of researcher - Use validated questionnaires
Are findings legitimate? Do the results presented really reflect the experiences of the participants?	Reliability - Are the methods and results replicable? - Remove error of variance (use reliable measures)
Generalisability - Less concerned with this issue as being a measure of validity on the whole. However, similarity with other contexts and coherence with previous work are sometimes argued as being measures of reliability (Potter, 1998) - Not a statistical generalisation	Generalisability Can the results be generalised to the wider population? Representative random sample of target population
