Remote Sensing Digital Image Analysis:

Remote Sensing Digital Image Analysis John A. Richards, 2012-09-13 Remote Sensing Digital Image Analysis provides the non specialist with an introduction to quantitative evaluation of satellite and aircraft derived remotely retrieved data. Since the first edition of the book there have been significant developments in the algorithms used for the processing and analysis of remote sensing imagery nevertheless many of the fundamentals have substantially remained the same. This new edition presents material that has retained value since those early days along with new techniques that can be incorporated into an operational framework for the analysis of remote sensing data. The book is designed as a teaching text for the senior undergraduate and postgraduate student and as a fundamental treatment for those engaged in research using digital image processing in remote sensing. The presentation level is for the mathematical non specialist. Since the very great number of operational users of remote sensing come from the earth sciences communities the text is pitched at a level commensurate with their background. Each chapter covers the pros and cons of digital remotely sensed data without detailed mathematical treatment of computer based algorithms but in a manner conducive to an understanding of their capabilities and limitations. Problems conclude each chapter.

Remote Sensing Digital Image Analysis John A. Richards, 2012-12-06 Possibly the greatest change confronting the practitioner and student of remote sensing in the period since the first edition of this text appeared in 1986 has been the enormous improvement in accessibility to image processing technology. Falling hardware and software costs combined with an increase in functionality through the development of extremely versatile user interfaces has meant that even the user unskilled in computing now has immediate and ready access to powerful and flexible means for digital image analysis and enhancement. An understanding at algorithmic level of the various methods for image processing has become therefore even more important in the past few years to ensure the full capability of digital image processing is utilised. This period has also been a busy one in relation to digital data supply. Several nations have become satellite data gatherers and providers using both optical and microwave technology. Practitioners and researchers are now faced therefore with the need to be able to process imagery from several sensors together with other forms of spatial data. This has been driven to an extent by developments in Geographic Information Systems (GIS) which in turn have led to the appearance of newer image processing procedures as adjuncts to more traditional approaches.

Remote Sensing Digital Image Analysis John A. Richards, 2013-04-17 With the widespread availability of satellite and aircraft remote sensing image data in digital form and the ready access most remote sensing practitioners have to computing systems for image interpretation there is a need to draw together the range of digital image processing procedures and methodologies commonly used in this field into a single treatment. It is the intention of this book to provide such a function at a level meaningful to the non specialist digital image analyst but in sufficient detail that algorithm limitations, alternative procedures and current trends can be appreciated. Often the applications specialist in remote sensing wishing to make use of digital processing procedures has had to depend

upon either the mathematically detailed treatments of image processing found in the electrical engineering and computer science literature or the sometimes necessarily superficial treatments given in general texts on remote sensing This book seeks to redress that situation Both image enhancement and classification techniques are covered making the material relevant in those applications in which photointerpretation is used for information extraction and in those wherein information is obtained by classification

Remote Sensing Digital Image Analysis John A. Richards, 2022-01-06 Remote Sensing Digital Image Analysis provides a comprehensive treatment of the methods used for the processing and interpretation of remotely sensed image data Over the past decade there have been continuing and significant developments in the algorithms used for the analysis of remote sensing imagery even though many of the fundamentals have substantially remained the same As with its predecessors this new edition again presents material that has retained value but also includes newer techniques covered from the perspective of operational remote sensing The book is designed as a teaching text for the senior undergraduate and postgraduate student and as a fundamental treatment for those engaged in research using digital image analysis in remote sensing The presentation level is for the mathematical non specialist Since the very great number of operational users of remote sensing come from the earth sciences communities the text is pitched at a level commensurate with their background The chapters progress logically through means for the acquisition of remote sensing images techniques by which they can be corrected and methods for their interpretation The prime focus is on applications of the methods so that worked examples are included and a set of problems conclude each chapter

Remote Sensing Digital Image Analysis: An Introduction, 2E Richards John A. Et. Al, 2007-12-01 Image Processing and GIS for Remote Sensing Jian Guo Liu, Philippa J. Mason, 2016-01-04 Following the successful publication of the 1st edition in 2009, the 2nd edition maintains its aim to provide an application driven package of essential techniques in image processing and GIS together with case studies for demonstration and guidance in remote sensing applications. The book therefore has a 3 in 1 structure which pinpoints the intersection between these three individual disciplines and successfully draws them together in a balanced and comprehensive manner. The book conveys in depth knowledge of image processing and GIS techniques in an accessible and comprehensive manner with clear explanations and conceptual illustrations used throughout to enhance student learning. The understanding of key concepts is always emphasised with minimal assumption of prior mathematical experience. The book is heavily based on the authors own research. Many of the author designed image processing techniques are popular around the world. For instance, the SFIM technique has long been adopted by ASTRIUM for mass production of their standard Pan sharpen imagery data. The new edition also includes a completely new chapter on subpixel technology and new case studies based on their recent research. Remote Sensing Imagery for Natural Resources Monitoring David S. Wilkie, John T. Finn, 1996 The Cambrian radiation was the explosive evolution of marine life that started 550 000 000 years ago. It ranks as one of the most important episodes in Earth history. This key event in the history of life on our planet changed the marine biosphere and its sedimentary environment forever, requiring a complex interplay of wide ranging biologic and nonbiologic processes. The Ecology of the Cambrian Radiation offers a comprehensive and surprising picture of the Earth at that ancient time. The book contains contributions from thirty three authors hailing from ten countries and will be of interest to paleontologists, geologists, biologists, and other researchers interested in the global Earth life system. *Advanced Image Processing Techniques for Remotely Sensed Hyperspectral Data* Pramod K. Varshney, Manoj K. Arora, 2013-03-09 The first of its kind, this book reviews image processing tools and techniques including Independent Component Analysis, Mutual Information, Markov Random Field Models, and Support Vector Machines. The book also explores a number of experimental examples based on a variety of remote sensors. The book will be useful to people involved in hyperspectral imaging research, as well as by remote sensing data like geologists, hydrologists, environmental scientists, civil engineers, and computer
