Renal Handling Of Phosphate:

Renal Handling of Phosphate Shaul G. Massry, 2012-12-06 When Shaul Massry and Herbert Fleisch asked me to write a foreword for this book I was honored and eagerly looked forward to reading the many chapters As they came and I skimmed through them my mind wandered back to the earliest classic contributions in this field in the late 1920s and early 1930s by Albright and his associates Greenwald and Gross and Adolph on the homeostatic regulation of inorganic phosphate and the central role of parathyroid hormone PTH in this regulation They clearly showed the exquisite sensitivity of the renal handling of phosphate to varying dietary and parenteral loads and to changes in the level of PTH That two outstanding investigators in the field of divalent ion metabolism should choose to edit a book solely about the renal handling of inorganic phosphate shows how far we have progressed from these early classics to the recent almost exponential increase in the research and publications related to this subject Despite this increase I asked myself is such a large new monograph consisting of 13 chapters and 30 distinguished authors warranted My reading of these chapters and my learning so much from them convinced me that it is and my pride was heightened in being asked to write the foreword for this book *Renal Handling of Phosphate* Shaul G Massry, 1980-05-01 Phosphate in Paediatric Health and Disease U. Giovannetti, 2012-12-06 Enormous progress has been made in the treatment of chronic renal failure over the last decades Until the 1950s chronic renal failure was considered to be an inexorably lethal condition This is no longer the case In addition the disease severe uremic syndrome is now extremely rare if existent at all in industrialized countries Physicians of my generation who saw patients hospitalized with hemorrhages pericarditis severe anemia cardiac failure malignant hypertension pruritus vomiting generalized edema and convulsions are particularly grateful for this progress I well remember seeing such patients hospitalized in the last days or weeks of their lives and also remember the sense of impotence I suffered for the complete lack of efficient measures I had at my disposal to manage their condition Nowadays hemodialysis peritoneal dialysis and kidney transplantation allow patients with chronic renal failure to survive for very long periods of time in a satisfactory condition Why then is there still a sense of dissatisfaction and why should we study dietary management The drawbacks of dialysis and transplantation are the main reasons but the certainty that dietary therapy is complementary to dialysis and even better than dialysis in certain conditions is also very important
