*The Century of Space Science* J.A. Bleeker, Johannes Geiss, M. Huber, 2012-12-06 One of the most attractive features of the young discipline of Space Science is that many of the original pioneers and key players involved are still available to describe their field Hence at this point in history we are in a unique position to gain first hand insight into the field and its development To this end *The Century of Space Science* a scholarly authoritative reference book presents a chapter by chapter retrospective of space science as studied in the 20th century The level is academic and focuses on key discoveries how these were arrived at their scientific consequences and how these discoveries advanced the thoughts of the key players involved With over 90 world class contributors such as James Van Allen Cornelis de Jager Eugene Parker Reimar Lüst and Ernst Stuhlinger and with a Foreword by Lodewijk Woltjer past ESO Director General this book will be immensely useful to readers in the fields of space science astronomy and the history of science Both academic institutions and researchers will find that this major reference work makes an invaluable addition to their collection *Comet Paths* Brook

Clearwater, FL, 2025-03-10 *Comet Paths* explores the captivating realm of comets those icy wanderers that occasionally illuminate our skies This book unveils the mysteries surrounding these celestial bodies from their physical characteristics and orbital mechanics to their profound implications for understanding the early solar system and the origins of life Discover that comets are not merely cosmic snowballs but rather time capsules preserving the building blocks of our planetary neighborhood Furthermore the book highlights the critical role of planetary defense emphasizing the importance of monitoring potentially hazardous comets The book adopts a multidisciplinary approach integrating observations theoretical models and laboratory experiments to provide a comprehensive understanding It begins with the basic properties of comets such as their nuclei comas and tails before delving into the dynamics of cometary orbits and the analysis of their composition including ices dust and organic molecules Readers will appreciate the book's journey through increasingly complex concepts mirroring the scientific process of unraveling the enigma of comets *Fusion Energy for Space Missions in the 21st Century*

Norman R. Schulze, 1991 **Comets III** Karen J Meech, Michael R Combi, Dominique Bockelée-Morvan, Sean N

Raymond, Michael Zolensky, 2024 *Comets III* brings together the major breakthroughs in comet science over the last twenty years. Edited by experts in the field, this comprehensive volume explores recent advancements in space missions, telescopic observations, and robotic surveys, providing new understandings of the composition, origins, and dynamics of comets. Intended for both researchers and students, *Comets III* offers insights into unresolved questions and sets the stage for future advancements.

**Space 2000** Harry L. Shipman, 2013-11-22 *Mercury*, 1992 *Hazards Due to Comets and Asteroids* Tom Gehrels, 2021-11-30 In 1993, the U.S. Department of Defense declassified information dealing with frequent explosions in the upper atmosphere caused by meteoric impact. It is estimated that impacts have occurred of a magnitude equivalent to the atomic bomb detonated at Hiroshima. Not all such space voyagers meet their end in the atmosphere; however, huge craters attest to the bombardment of Earth over millions of years, and a major impact may have resulted in the extinction of dinosaurs. An impact in Siberia near the beginning of this century proves that such events are not confined to geologic time.

*Hazards Due to Comets and Asteroids* marks a significant step in the attempt to come to grips with the threats posed by such phenomena. It brings together more than one hundred scientists from around the world who draw on observational and theoretical research to focus on the technical problems related to all aspects of dealing with these hazards: searching for and identifying hazardous comets and asteroids; describing their statistics and characteristics; intercepting and altering the orbits of dangerous objects; and applying existent technologies: rocket boosters, rendezvous, and soft landing techniques; instrumentation to such missions. The book considers defensive options for diverting or disrupting an approaching body, including solar sails, kinetic energy impacts, nuclear explosives, robotic mass drivers, and various propulsion systems. A cataclysmic impact posing a threat to life on Earth is a possibility that tomorrow's technology is capable of averting. This book examines in depth the reality of the threat and proposes practical measures that can be initiated now should we ever need to deal with it.

*Exploring the Unknown* Roger D. Launius, 1995 *Exploring the Unknown* is a multi-volume series containing a selection of key documents in the history of the U.S. civil space program. Volume V, focusing on the exploration of space by robotic spacecraft, that have significantly altered our perspectives on the cosmos, prints 121 key documents on the history of space science, planetary exploration of the solar system, and space astrophysics, edited for ease of use. Many of these documents are published here for the first time. Each is introduced by a headnote providing context, bibliographical information, and background information necessary to understanding the document. This documentary history is an essential reference for anyone interested in the history of the U.S. civil space program and its development over time. It will serve as a valuable source both for students and scholars. Additional volumes will appear later that trace space science and the programmatic developments in the history of the U.S. exploration of space.
