MASS Selecta Svetlana Katok,A. B. Sossinsky,Serge Tabachnikov,2003 The Mathematics Advanced Study Semesters MASS program offers an opportunity for talented undergraduate students who are serious in the pursuit of mathematical knowledge This book represents various aspects of the MASS program over its six year existence including core courses summer courses students research and colloquium talks *MASS Selecta* Svetlana Katok,A. B. Sossinsky,Serge Tabachnikov, This book results from a unique and innovative program at Pennsylvania State University Under the program the best of the best students nationwide are chosen to study challenging mathematical areas under the guidance of experienced mathematicians This program Mathematics Advanced Study Semesters MASS offers an unparalleled opportunity for talented undergraduate students who are serious in the pursuit of mathematical knowledge This volume represents various aspects of the MASS program over its six year existence including core courses summer courses students research and colloquium talks The book is most appropriate for college professors of mathematics who work with bright and eager undergraduate and beginning graduate students for such students who want to expand their mathematical horizons and for everyone who loves mathematics and wants to learn more interesting and unusual material The first half of the book contains lecture notes of nonstandard courses A text for a semester long course on p adic analysis is centered around contrasts and similarities with its real counterpart A shorter text focuses on a classical area of interplay between geometry algebra and number theory continued fractions hyperbolic geometry and quadratic forms Also provided are detailed descriptions of two innovative courses one on geometry and the other on classical mechanics These notes constitute what one may call the skeleton of a course leaving the instructor ample room for innovation and improvisation The second half of the book contains a large collection of essays on a broad spectrum of exciting topics from Hilbert s Fourth Problem to geometric inequalities and minimal surfaces from mathematical billiards to fractals and tilings from unprovable theorems to the classification of finite simple groups and lexicographic codes Nonlinear Perron-Frobenius Theory Bas Lemmens,Roger Nussbaum,2012-05-03 Guides the reader through the nonlinear Perron Frobenius theory introducing them to recent developments and challenging open problems **Integral Geometry And Convexity - Proceedings Of The International Conference** Eric L Grinberg,Gaoyong Zhang,Jiazuo Zhou,Shougui Li,2006-04-20 Integral geometry known as geometric probability in the past originated from Buffon s needle experiment Remarkable advances have been made in several areas that involve the theory of convex bodies This volume brings together contributions by leading international researchers in integral geometry convex geometry complex geometry probability statistics and other convexity related branches The articles cover both recent results and exciting directions for future research **Proceedings of the International Conference Integral Geometry and Convexity** Eric Grinberg,2006 Integral geometry known as geometric probability in the past originated from Buffon s needle experiment Remarkable advances have been made in several areas

Handbook of the History and Philosophy of Mathematical Practice Bharath Sriraman, 2024-04-26 The purpose of this unique handbook is to examine the transformation of the philosophy of mathematics from its origins in the history of mathematical practice to the present It aims to synthesize what is known and what has unfolded so far as well as to explore directions in which the study of the philosophy of mathematics as evident in increasingly diverse mathematical practices is headed Each section offers insights into the origins debates methodologies and newer perspectives that characterize the discipline today Contributions are written by scholars from mathematics history and philosophy as well as other disciplines that have contributed to the richness of perspectives abundant in the study of philosophy today who describe various mathematical practices throughout different time periods and contrast them with the development of philosophy Editorial Advisory Board Andrew Aberdein Florida Institute of Technology USA Jody Azzouni Tufts University USA Ot vio Bueno University of Miami USA William Byers Concordia University Canada Carlo Cellucci Sapienza University of Rome Italy Chandler Davis University of Toronto Canada 1926 2022 Paul Ernest University of Exeter UK Michele Friend George Washington University USA Reuben Hersch University of New Mexico USA 1927 2020 Kyeong Hwa Lee Seoul National University South Korea Yuri Manin Max Planck Institute for Mathematics Germany 1937 2023 Athanase Papadopoulos University of Strasbourg France Ulf Persson Chalmers University of Technology Sweden John Stillwell University of San Francisco USA David Tall University of Warwick UK 1941 2024 This book with its exciting depth and breadth illuminates us about the history practice and the very language of our subject about the role of abstraction of proof and manners of proof about the interplay of fundamental intuitions about algebraic thought in contrast to geometric thought The richness of mathematics and the philosophy encompassing it is splendidly exhibited over the wide range of time these volumes cover from deep platonic and neoplatonic influences to the most current experimental approaches Enriched as well with vivid biographies and brilliant personal essays written by and about people who play an important role in our tradition this extraordinary collection of essays is fittingly dedicated to the memory of Chandler Davis Reuben Hersch and Yuri Manin Barry Mazur Gerhard Gade University Professor Harvard University This encyclopedic Handbook will be a treat for all those interested in the history and philosophy of mathematics Whether one is interested in individuals from Pythagoras through Newton and Leibniz to Grothendieck fields geometry algebra number theory logic probability analysis viewpoints from Platonism to Intuitionism or methods proof experiment computer assistance the reader will find a multitude of chapters that inform and fascinate John Stillwell Emeritus Professor of Mathematics University of San Francisco Recipient of the 2005 Chauvenet Prize Dedicating a volume to the memory of three mathematicians Chandler Davis Reuben Hersch and Yuri Manin who went out of their way to show to a broader audience that mathematics is more than

what they might think is an excellent initiative Gathering authors coming from many different backgrounds but who are very strict about the essays they write was successfully achieved by the editor in chief The result a great source of potential inspiration Jean Pierre Bourguignon Nicolaas Kuiper Honorary Professor at the Institut des Hautes tudes Scientifiques

Differential Geometry and Its Applications Old?ich Kowalski, Olga Krupkova, 2008 This volume contains invited lectures and selected research papers in the fields of classical and modern differential geometry global analysis and geometric methods in physics presented at the 10th International Conference on Differential Geometry and its Applications DGA2007 held in Olomouc Czech Republic The book covers recent developments and the latest results in the following fields Riemannian geometry connections jets differential invariants the calculus of variations on manifolds differential equations Finsler structures and geometric methods in physics It is also a celebration of the 300th anniversary of the birth of one of the greatest mathematicians Leonhard Euler and includes the Euler lecture Leonhard Euler 300 years on by R Wilson Notable contributors include J F Cari ena M Castrill n L pez J Erichhorn J H Eschenburg I Kol A P Kopylov J Korba O Kowalski B Kruglikov D Krupka O Krupkov R L andre Haizhong Li S Maeda M A Malakhaltsev O I Mokhov J Mu oz Masqu S Preston V Rovenski D J Saunders M Sekizawa J Slov k J Szilasi L Tam ssy P Walczak and others *Abstracts of Papers Presented to the American Mathematical Society* American Mathematical Society, 2004 **Research Connections** Abra Brisbin, Karen Lange, Erin McNicholas, Emilie Purvine, 2025-02-18 What does math research really look like Which subfield is right for me Do people like me go to graduate school and succeed This book provides students a sneak preview of math research in a variety of subfields Each chapter features the work of a different mathematician along with enough background material for an advanced undergraduate or early graduate student to understand the key ideas and get a sense for the styles of thinking involved in each subfield Each chapter is prefaced by a short biography of the mathematician who wrote the chapter all people connected to the Carleton College Summer Math Program for Women providing advice and examples of paths from undergraduate education through graduate school and beyond This book provides a source of ideas and starting points for in class projects independent studies and student talks as well as supplementary reading in courses The profiles of early career mathematicians and statisticians at the beginning of each chapter are valuable as an advising resource for students considering graduate school or to show students a diverse view of modern mathematicians in a Math for Liberal Arts style course The British National Bibliography Arthur James Wells, 2004 *St. Petersburg Mathematical Journal*, 2004

\$p\$-adic Analysis Compared with Real Svetlana Katok, 2007 The book gives an introduction to p -adic numbers from the point of view of number theory topology and analysis Compared to other books on the subject its novelty is both a particularly balanced approach to these three points of view and an emphasis on topics accessible to undergraduates in addition several topics from real analysis and elementary topology which are not usually covered in undergraduate courses totally disconnected spaces and Cantor sets points of discontinuity of maps and the Baire Category Theorem surjectivity of

isometries of compact metric spaces are also included in the book They will enhance the reader's understanding of real analysis and intertwine the real and p-adic contexts of the book The book is based on an advanced undergraduate course given by the author The choice of the topic was motivated by the internal beauty of the subject of p-adic analysis an unusual one in the undergraduate curriculum and abundant opportunities to compare it with its much more familiar real counterpart The book includes a large number of exercises Answers hints and solutions for most of them appear at the end of the book Well written with obvious care for the reader the book can be successfully used in a topic course or for self study
