Mathematical Models of Group Structure Thomas F. Mayer, 1975 A Theory of Group Structures Kenneth Mackenzie, 2022-07-30 First published in 1976 this A Theory of Group Structures is a study of the aggregation of individuals into groups which cuts across many different social sciences Volume one attempts to formulate a more rigorous theory of group structures by providing consistent definitions assumptions measures methodology theory and results Volume two examines a sequence of twelve experiments and reports empirical tests of the theory presented in volume one The result is a major revision of existing research into problems of group structure and a case study in paradigm development This book will be of interest to students of all social sciences A Theory of Group Structures Kenneth D. Mackenzie, 2018-10-24 First published in 1976 this A Theory of Group Structures is a study of the aggregation of individuals into groups which cuts across many different social sciences Volume two examines a sequence of twelve experiments and reports empirical tests of the theory presented in volume one The result is a major revision of existing research into problems of group structure and a case study in paradigm development This book will be of interest to students of all social sciences Group Structure Motivation and Group Performance Mauk Mulder, 2020-05-18 No detailed description available for Group Structure Motivation and Group Performance **Mathematical Structures and Mathematical Modelling** Isaak Moiseevich Āglom, 1986 A substantial amount of this book is devoted to general questions including significant material from the history of science allowing one to follow the formation of modern attitudes on the essence of mathematics and the methods of its applications only chapters 5 and 6 are devoted to a survey of the basic algebraic structures and a more detailed analysis of a structure associated with some geometric considerations are of a more concrete character Researching Mathematical Modelling Education in Disruptive Times Hans-Stefan Siller, Vince Geiger, Gabriele Kaiser, 2024-06-03 This edited volume documents research on mathematical modelling education before during and after the Covid 19 pandemic Mathematical modelling is essential for understanding natural and human generated phenomena and informs decision making about events such as the pandemic climate change and other disruptive events Communication to the public often by the media makes use of mathematical modelling to justify changes to public policy as seen during the COVID 19 crisis Consequently mathematical modelling has assumed an increasingly prominent role in curricula internationally providing opportunities to understand how it is used in current circumstances and to plan for the needs of future societies This book focuses on research on mathematical modelling education and its implementation at school and tertiary level Contributions to the book and point to directions for further innovation in mathematical modelling education Authors of this volume are members of the International Community of Teachers of Mathematical Modelling the peak research body for the teaching and learning of mathematical modelling **Structure and Dynamics of Asymmetric Interactions** Naohito Chino, 2025-01-03 This book integrates the fundamentals of asymmetric multidimensional scaling spectral graph theory graph embedding theory and

various dynamical systems theories that deal with the static and dynamic aspects of asymmetric phenomena. In this way it provides a comprehensive introduction to theories and methods for analyzing phenomena observed universally in social, behavioral, economical, geographical, biological, neural, chemical, reaction and other networks. The topics addressed in here include the notions of asymmetric similarity matrices, graph spectra, dimension reduction and difference and differential equations to describe the dynamics of networks, bifurcation of vector fields, Mandelbrot sets, fractals and chaos and Hilbert spaces. Illustrated by carefully chosen examples and supported by extensive simulation studies, the book is highly recommended to readers who seek to discover static asymmetric structures among members or nodes. It also appeals to those who want to understand the kinds of dynamics that are theoretically possible in their research domains.

Mathematical Modelling Murray S. Klamkin, 1987-01-01. Mathematics of Computing Miscellaneous. Mathematics of Complexity and Dynamical Systems Robert A. Meyers, 2011-10-05. Mathematics of Complexity and Dynamical Systems is an authoritative reference to the basic tools and concepts of complexity systems theory and dynamical systems from the perspective of pure and applied mathematics. Complex systems are systems that comprise many interacting parts with the ability to generate a new quality of collective behavior through self-organization, e.g., the spontaneous formation of temporal, spatial or functional structures. These systems are often characterized by extreme sensitivity to initial conditions as well as emergent behavior that are not readily predictable or even completely deterministic. The more than 100 entries in this wide-ranging single source work provide a comprehensive explication of the theory and applications of mathematical complexity covering ergodic theory, fractals and multifractals, dynamical systems, perturbation theory, solitons, systems and control theory and related topics. Mathematics of Complexity and Dynamical Systems is an essential reference for all those interested in mathematical complexity from undergraduate and graduate students up through professional researchers.

The Mathematical Structure of Stable Physical Systems Dr. Martin Concoyle & G.P. Coatsmundi, 2014. This book is an introduction to the simple math patterns used to describe fundamental stable spectral orbital physical systems represented as discrete hyperbolic shapes. The containment set has many dimensions and these dimensions possess macroscopic geometric properties which are also discrete hyperbolic shapes. Thus it is a description which transcends the idea of materialism, i.e., it is higher dimensional and it can also be used to model a life form as a unified high dimension geometric construct which generates its own energy and which has a natural structure for memory where this construct is made in relation to the main property of the description being in fact the spectral properties of both material systems and of the metric spaces which contain the material systems where material is simply a lower dimension metric space and where both material components and metric spaces are in resonance with the containing space. Partial differential equations are defined on the many metric spaces of this description but their main function is to act on either the usually unimportant free material components to most often cause non-linear dynamics or to perturb the orbits of the quite often condensed material trapped by or within the stable orbits of a very stable
