Mathematician And His Mathematical Work Selected Papers Of S S Chern:

Mathematician And His Mathematical Work, A: Selected Papers Of S S Chern Shiu-yuen Cheng, Shiing-shen Chern, P Li, Gang Tian, 1996-09-07 This volume is about the life and work of Shiing Shen Chern 1911 one of the leading mathematicians of this century The book contains personal accounts by some friends together with a summary of the mathematical works by Chern himself Besides a selection of the mathematical papers the book also contains all his papers published after 1988 A Mathematician and His Mathematical Work Shiing-Shen Chern, G. Tian, Peter Li, 1996 This volume is about the life and work of Shiing Shen Chern 1911 one of the leading mathematicians of this century The book contains personal accounts by some friends together with a summary of the mathematical works by Chern himself Besides a selection of the mathematical papers the book also contains all his papers published after 1988 **Topics In Contemporary Mathematical Physics (Second Edition)** Kai S Lam, 2015-09-17 This new second edition contains a general treatment of quantum field theory QFT in a simple scalar field setting in addition to the modern material on the applications of differential geometry and topology group theory and the theory of linear operators to physics found in the first edition All these are introduced without assuming more background on the part of the reader than a good foundation in undergraduate junior level mathematical physics The new material entirely focuses on an introduction to quantum field theory emphasizing the Feynman path functional integral approach to QFT and the renormalization group With respect to the latter the focus is on an introduction of its application to critical phenomena in statistical physics following the outgrowth of the Callan Symanzik equation originally developed in the context of high energy physics and the seminal contributions of Kenneth Wilson One of the overriding aims of the new material is also to draw students attention to the deep connections between high energy physics and statistical mechanics The unavoidable technical aspects are explained with a minimum of prerequisite material and jargon and conceptual understanding is always given prominence before mastery of technical details but the importance of the latter is never underestimated Derivational details and motivational discussions are provided in abundance in order to ensure continuity of reading and to avoid trying the readers patience Topics in Contemporary Mathematical Physics Kai Shue Lam, 2003 This textbook pitched at the advanced undergraduate to beginning graduate level focuses on mathematical topics of relevance in contemporary physics that are not usually covered in texts at the same level Its main purpose is to help students appreciate and take advantage of the modern trend of very productive symbiosis between physics and mathematics Three major areas are covered 1 linear operators 2 group representations and Lie algebra representations and 3 topology and differential geometry The features of this work include an exposition style which is a fusion of those common in the standard physics and mathematics literatures a level of exposition that varies from quite elementary to moderately advanced so that the text should be of interest to a wide audience a strong degree of thematic unity despite the diversity of the topics covered and cross references so that from any part of the book the reader can trace easily where specific concepts or

techniques are introduced **Fundamental Principles Of Classical Mechanics: A Geometrical Perspective** Kai S Lam, 2014-07-07 This book is written with the belief that classical mechanics as a theoretical discipline possesses an inherent beauty depth and richness that far transcends its immediate applications in mechanical systems These properties are manifested by and large through the coherence and elegance of the mathematical structure underlying the discipline and are eminently worthy of being communicated to physics students at the earliest stage possible This volume is therefore addressed mainly to advanced undergraduate and beginning graduate physics students who are interested in the application of modern mathematical methods in classical mechanics in particular those derived from the fields of topology and differential geometry and also to the occasional mathematics student who is interested in important physics applications of these areas of mathematics Its main purpose is to offer an introductory and broad glimpse of the majestic edifice of the mathematical theory of classical dynamics not only in the time honored analytical tradition of Newton Laplace Lagrange Hamilton Jacobi and Whittaker but also the more topological geometrical one established by Poincare and enriched by Birkhoff Lyapunov Smale Siegel Kolmogorov Arnold and Moser as well as many others **Selected Papers of F.W.J. Olver** Frank W. J. Olver, 2000 **Selected Papers Of Yu I Manin** Yu I Manin, 1996-06-28 The book is a collection of research and review articles in several areas of modern mathematics and mathematical physics published in the span of three decades The ICM Kyoto talk Mathematics as Metaphor summarises the author's view on mathematics as an outgrowth of natural language

Asian American History Day by Day Jonathan H. X. Lee, 2018-10-12 For student research this reference highlights the importance of Asian Americans in U S history the impact of specific individuals and this ethnic group as a whole across time documenting evolving policies issues and feelings concerning this particular American population *Asian American History Day by Day A Reference Guide to Events* provides a uniquely interesting way to learn about events in Asian American history that span several hundred years and the contributions of Asian Americans to U S culture in that time The book is organized in the form of a calendar with each day of the year corresponding with an entry about an important event person or innovation that span several hundred years of Asian American history and references to books and websites that can provide more information about that event Readers will also have access to primary source document excerpts that accompany the daily entries and serve as additional resources that help bring history to life With this guide in hand teachers will be able to more easily incorporate Asian American history into their classes and students will find the book an easy to use guide to the Asian American past and an ideal jumping off point for more targeted research *The Collected Papers of Wei-Liang Chow* Shiing-Shen Chern, 2002 This invaluable book contains the collected papers of Prof Wei Liang Chow an original and versatile mathematician of the 20th Century Prof Chow's name has become a household word in mathematics because of the Chow ring Chow coordinates and Chow's theorem on analytic sets in projective spaces The Chow ring has many advantages and is widely used in intersection theory of algebraic geometry Chow coordinates have been a very versatile tool in many aspects of

algebraic geometry Chow's theorem OCo that a compact analytic variety in a projective space is algebraic OCo is justly famous it shows the close analogy between algebraic geometry and algebraic number theory About Professor Wei Liang Chow The long and distinguished career of Prof Wei Liang Chow 1911 OCo 95 as a mathematician began in China with professorships at the National Central University in Nanking 1936 OCo 37 and the National Tung Chi University in Shanghai 1946 OCo 47 and ultimately led him to the United States where he joined the mathematics faculty of Johns Hopkins University in Baltimore Maryland first as an associate professor from 1948 to 1950 then as a full professor from 1950 until his retirement in 1977 In addition to serving as chairman of the mathematics department at Johns Hopkins from 1955 to 1965 he was Editor in Chief of the American Journal of Mathematics from 1953 to 1977

The Geometry of Hamilton and Lagrange Spaces R. Miron, Dragos Hrimiuc, Hideo Shimada, Sorin V. Sabau, 2006-04-11 The title of this book is no surprise for people working in the field of Analytical Mechanics However the geometric concepts of Lagrange space and Hamilton space are completely new The geometry of Lagrange spaces introduced and studied in 76 96 was extensively examined in the last two decades by geometers and physicists from Canada Germany Hungary Italy Japan Romania Russia and U S A Many international conferences were devoted to debate this subject proceedings and monographs were published 10 18 112 113 A large area of applicability of this geometry is suggested by the connections to Biology Mechanics and Physics and also by its general setting as a generalization of Finsler and Riemannian geometries The concept of Hamilton space introduced in 105 101 was intensively studied in 63 66 97 and it has been successful as a geometric theory of the Hamiltonian function the fundamental entity in Mechanics and Physics The classical Legendre's duality makes possible a natural connection between Lagrange and Hamilton spaces It reveals new concepts and geometrical objects of Hamilton spaces that are dual to those which are similar in Lagrange spaces Following this duality Cartan spaces introduced and studied in 98 99 are roughly speaking the Legendre duals of certain Finsler spaces 98 66 67 The above arguments make this monograph a continuation of 106 113 emphasizing the Hamilton geometry

Mathematicians in Bologna 1861-1960 Salvatore COEN, 2012-05-11 The scientific personalities of Luigi Cremona Eugenio Beltrami Salvatore Pincherle Federigo Enriques Beppo Levi Giuseppe Vitali

Beniamino Segre and of several other mathematicians who worked in Bologna in the century 1861 1960 are examined by different authors in some cases providing different view points Most contributions in the volume are historical they are reproductions of original documents or studies on an original work and its impact on later research The achievements of other mathematicians are investigated for their present day importance

Fields Medallists' Lectures Daniel Iagolnitzer, 2003 Although the Fields Medal does not have the same public recognition as the Nobel Prizes they share a similar intellectual standing It is restricted to the field of mathematics and an age limit of 40 has become an accepted tradition This volume presents contributions from Fields Medallists

Fields Medallists' Lectures, 2nd Edition Michael Atiyah, Daniel Iagolnitzer, 2003-11-03 Although the Fields Medal does not have the same public recognition as the Nobel Prizes they share a similar intellectual standing It is restricted to one field that of mathematics and an age limit of 40 has become an accepted tradition Mathematics has in the main been interpreted as pure mathematics and this is not so unreasonable since major contributions in some applied areas can be and have been recognized with Nobel Prizes A list of Fields Medallists and their contributions provides a bird s eye view of mathematics over the past 60 years It highlights the areas in which at various times greatest progress has been made This volume does not pretend to be comprehensive nor is it a historical document On the other hand it presents contributions from Fields Medallists and so provides a highly interesting and varied picture The second edition of Fields Medallists Lectures features additional contributions from the following Medallists Kunihiko Kodaira 1954 Richard E Borcherds 1998 William T Gowers 1998 Maxim Kontsevich 1998 Curtis T McMullen 1998 and Vladimir Voevodsky 2002

Mathematics Unbound: The Evolution of an International Mathematical Research Community, 1800-1945 Karen Hunger Parshall, 2002 Although today s mathematical research community takes its international character very much for granted this global nature is relatively recent having evolved over a period of roughly 150 years from the beginning of the nineteenth century to the middle of the twentieth century During this time the practice of mathematics changed from being centered on a collection of disparate national communities to being characterized by an international group of scholars for whom the goal of

mathematical research and cooperation transcended national boundaries Yet the development of an international community was far from smooth and involved obstacles such as war political upheaval and national rivalries Until now this evolution has been largely overlooked by historians and mathematicians alike This book addresses the issue by bringing together essays by twenty experts in the history of mathematics who have investigated the genesis of today's international mathematical community This includes not only developments within component national mathematical communities such as the growth of societies and journals but also more wide ranging political philosophical linguistic and pedagogical issues The resulting volume is essential reading for anyone interested in the history of modern mathematics It will be of interest to mathematicians historians of mathematics and historians of science in general

Sammlung, 1996 The book is a collection of research and review articles in several areas of modern mathematics and mathematical physics published in the span of three decades The ICM Kyoto talk *Mathematics as Metaphor* summarises the author's view on mathematics as an outgrowth of natural language

Fields Medallists' Lectures Michael Francis Atiyah, Daniel Iagolnitzer, 1997 Although not as publicly well known as the Nobel Prizes the Fields Medal shares the same intellectual standing and is the equivalent award in the field of mathematics This volume presents a selected list of 22 Fields Medallists and their contributions to give a highly interesting and varied bird's eye view of mathematics over the past 60 years The contributions relate directly to the work for which the Medals were awarded or to the medallists' more current interests In most cases they are preceded by the introductory speech given by another leading mathematician during the prize ceremony a photograph and up to date biographical notice
