Campbell, John C. Higgins, 1984 Based upon the principle that graph design should be a science this book presents the principles of graph construction The orientation of the material is toward graphs in technical writings such as journal articles and technical reports But much of the material is relevant for graphs shown in talks and for graphs in nontechnical publications from back cover Mathematics in Twentieth-Century Literature and Art Robert Tubbs, 2014-07-15 Chips away at the notion of an accidental relationship between math and art and literature During the twentieth century many artists and writers turned to abstract mathematical ideas to help them realize their aesthetic ambitions Man Ray Marcel Duchamp and perhaps most famously Piet Mondrian used principles of mathematics in their work Was it mere coincidence or were these artists simply following their instincts which in turn were ruled by mathematical underpinnings such as optimal solutions for filling a space If math exists within visual art can it be found within literary pursuits In short just what is the relationship between mathematics and the creative arts In this provocative original exploration of mathematical ideas in art and literature Robert Tubbs argues that the links are much stronger than previously imagined and exceed both coincidence and commonality of purpose Not only does he argue that mathematical ideas guided the aesthetic visions of many twentieth century artists and writers Tubbs further asserts that artists and writers used math in their creative processes even though they seemed to have no affinity for mathematical thinking In the end Tubbs makes the case that art can be better appreciated when the math that inspired it is better understood An insightful tour of the great masters of the last century and an argument that challenges long held paradigms Mathematics in Twentieth Century Literature and Art will appeal to mathematicians humanists and artists as well as instructors teaching the connections among math literature and art
