Rethinking Disability and Mathematics Rachel Lambert,2024-04-15 Every child has a right to make sense of math and to use math to make sense of their worlds Despite their gifts students with disabilities are often viewed from a deficit

standpoint in mathematics classrooms These students are often conceptualized as needing to be fixed or remediated Rethinking Disability and Mathematics argues that mathematics should be a transformative space for these students a place where they can discover their power and potential and be appreciated for their many strengths Author Rachel Lambert introduces Universal Design for Learning for Math UDL Math a way to design math classrooms that empowers disabled and neurodiverse students to engage in mathematics in ways that lead to meaningful and joyful math learning The book showcases how UDL Math can open up mathematics classrooms so that they provide access to meaningful understanding and an identity as a math learner to a wider range of students Weaved throughout the book are the voices of neurodiverse learners telling their own stories of math learning Through stories of real teachers recognizing the barriers in their own math classrooms and redesigning to increase access the book Reframes students with disabilities from a deficit to an asset perspective paving the way for trusting their mathematical thinking Offers equitable math instruction for all learners including those with disabilities neurodiverse students and or multilingual learners Applies UDL to the math classroom providing practical tips and techniques to support students cognitive affective and strategic development Immerses readers in math classrooms where all students are engaged in meaningful mathematics from special education day classes to inclusive general education classrooms from grades K 8 Integrates research on mathematical learning including critical math content such as developing number sense and place value fluency with math facts and operations and understanding fractions and algebraic thinking Explores critical issues such as writing IEP goals in math This book is designed for all math educators both those trained as general education teachers and those trained as special education teachers The UDL Math approach is adapted to work for all learners because everyone varies in how they perceive the world and in how they approach mathematical problem solving When we rethink mathematics to include multiple ways of being a math learner we make math accessible and engaging for a wider group of learners Enriching Your Math Curriculum Lainie Schuster,2010 Presents practices and routines designed to support and nourish teachers as they prepare and present a meaningful year of mathematics instruction for fifth grade mathematicians Offers activities lessons and narration that can be easily adapted or adjusted to fit the particular needs of the students or the requirements of a prescribed curriculum **Engineering Play** Mizuko Ito,2012-02-10 How the influential industry that produced such popular games as Oregon Trail and KidPix emerged from experimental efforts to use computers as tools in child centered learning Today computers are part of kids everyday lives used both for play and for learning We envy children s natural affinity for computers the ease with which they click in and out of digital worlds Thirty years ago however the computer belonged almost exclusively to business the military and academia In Engineering Play Mizuko Ito describes the transformation of the computer from a tool associated with adults and work to one linked to children learning and play Ito gives an account of a pivotal period in the 1980s and 1990s which saw the rise of a new category of consumer software designed specifically for elementary school aged children Edutainment

software sought to blend various educational philosophies with interactive gaming and entertainment and included such titles as Number Munchers Oregon Trail KidPix and Where in the World Is Carmen Sandiego The children s software boom and the bust that followed says Ito can be seen as a microcosm of the negotiations surrounding new technology children and education The story she tells is both a testimonial to the transformative power of innovation and a cautionary tale about its limitations
