**Classroom** ,2002 **The Inspirational Untold Stories of Secondary Mathematics Teachers** Alice F. Artzt,Frances R. Curcio,2020-08-01 Personal story telling is a powerful and interesting medium through which one can share experiences insights successes and difficulties in meaningful contexts Teaching in general and mathematics teaching in particular is much more than what meets the eye Most people have only experienced teaching from the vantage point of a student and have impressions of teachers and teaching that are simplistic and usually totally incorrect The lives of mathematics teachers are varied and contrary to what one might think they are The journeys of exemplary in service teachers are not linear there are many bends potholes and detours through which they have navigated The road conditions of teaching are fodder for the 12 untold stories collected in this volume whose authors graduated from a special four year undergraduate mathematics teacher preparation program containing innovative components many of which are revealed through the experiences described in their stories The range of narratives vary in every possible way from the reasons they became mathematics teachers to the number of years teaching to the experiences encountered while teaching to the different roles they have assumed throughout their careers Nevertheless one strand permeates all of the stories their passion for what they do and their ability to reflect on early college experiences that contribute to their performance These inspiring narratives will shed light on the developmental processes of mathematics teachers what it means to teach mathematics and the components of a secondary mathematics teacher preparation program that can contribute to their expertise Praise for The Inspirational Untold Stories of Secondary Mathematics Teachers This lovely book contains personal stories about the process of becoming a mathematics teacher and the challenges and rewards of the early years of teaching These stories highlight that the path to teaching is often indirect rocky and filled with doubts But these poignant stories are powerful because they are so honest I wish I d read these stories before I experienced some of the joys and challenges of my early years of teaching because they would have prepared me for the roller coaster of emotion associated with entering this complex but beautiful profession I think these stories will be helpful when working with prospective and early career teachers Randolph Philipp Professor of Mathematics Education School of Teacher Education San Diego State University Immediate Past President Association of Mathematics Teacher Educators AMTE This is a book about real people and true stories the narratives are really insightful

and truly inspirational. It is not only a book that those involved in teacher preparation programs may find useful and informative to read but also a book that could provide insights and inspiration to those who are exploring what it is like to be a teacher. The journey of each of these success stories despite the diverse starting point of each speaks volumes of the importance of an effective teacher preparation program that not only nurtures but also provides support for the growth of the preservice teachers. The narratives in this book are certainly a testimonial to what we often hear: Teachers are more often made than born. Simple Math Level 1 Teacher's Manual Janice L. Semple, Linda Lee, 2005. The Level 1 Teacher's Manual focuses on addition while developing many related skills. Each of the 52 lessons begins with a measurable objective and includes a clear teaching activity, numerous optional games, activities, and ideas for teacher-made supplemental materials. Added sections such as special problems and older students assist the educator in adapting the program to the spectrum of learning challenges. Available Fall 2005, the Second Edition, Level One Teacher's Manual has been revised by the original author. Letter to the Reader: Simple Math is a complete basic skills mathematics program for students of all ages and all learning abilities. We use a carefully ordered sequence of associative mnemonics in order to embed an accurate understanding of math concepts and skills in the long-term memory of our students; hence the expression, Simply Unforgettable. We do not ask students to memorize math facts through repetition. We do not use learning by rote methods that teach only to a student's short-term memory. We have never encountered a math program or a supplemental material based entirely on learning by association nor have we ever encountered a program that has enjoyed our level of success with all students across the learning spectrum. Now in its 25th year, the program has undergone both a business reorganization and a long-awaited revision of the Level One Teacher's Manual by the original author, Jan Semple. Simple Math materials were formerly distributed by Stevenson Learning Skills Inc. Moving forward, Simple Math Inc., a new company founded by members of the Semple family, will actively market our program while safeguarding the integrity of this tried and true process.
