by Dr Adam Hart-Davis,2011-09-29 During the Victorian era industrial and economic growth led to a phenomenal rise in productivity and invention That spirit of creativity and ingenuity was reflected in the massive expansion in scope and complexity of many scientific disciplines during this time with subjects evolving rapidly and the creation of many new disciplines The subject of mathematics was no exception and many of the advances made by mathematicians during the Victorian period are still familiar today matrices vectors Boolean algebra histograms and standard deviation were just some of the innovations pioneered by these mathematicians This book constitutes perhaps the first general survey of the mathematics of the Victorian period It assembles in a single source research on the history of Victorian mathematics that would otherwise be out of the reach of the general reader It charts the growth and institutional development of mathematics as a profession through the course of the 19th century in England Scotland Ireland and across the British Empire It then focuses on developments in specific mathematical areas with chapters ranging from developments in pure mathematical topics such as geometry algebra and logic to Victorian work in the applied side of the subject including statistics calculating machines and astronomy Along the way we encounter a host of mathematical scholars some very well known such as Charles Babbage James Clerk Maxwell Florence Nightingale and Lewis Carroll others largely forgotten but who all contributed to the development of Victorian mathematics      **Intracranial Pressure and Brain Monitoring XV** Beng-Ti Ang,2016-05-10 This

volume showcases recent high quality work relating to the pathophysiology biophysics monitoring and treatment of traumatic brain injury and hydrocephalus that was presented at the 15th International Symposium on Intracranial Pressure and Brain Monitoring ICP held in Singapore in November 2013 The included papers derive from experts in neurointensive care physiology physics engineering and neurosurgery who have made important contributions in this translational area of research All were selected from among oral and oral poster presentations following a rigorous peer review process involving the ICP Board members and their focus ranges from the latest research findings and developments to clinical trials and experimental studies This collection of papers from ICP 2013 continues the proud tradition of publishing key work from the

ICP symposia and will be of interest for all who wish to stay abreast of recent advances in the field

**Stochastic Processes: Modeling and Simulation** D N Shanbhag, Calyampudi Radhakrishna Rao, 2003-02-24 This sequel to volume 19 of Handbook on Statistics on Stochastic Processes Modelling and Simulation is concerned mainly with the theme of reviewing and in some cases unifying with new ideas the different lines of research and developments in stochastic processes of applied flavour This volume consists of 23 chapters addressing various topics in stochastic processes These include among others those on manufacturing systems random graphs reliability epidemic modelling self similar processes empirical processes time series models extreme value theory applications of Markov chains modelling with Monte Carlo techniques and stochastic processes in subjects such as engineering telecommunications biology astronomy and chemistry particular with modelling simulation techniques and numerical methods concerned with stochastic processes The scope of the project involving this volume as well as volume 19 is already clarified in the preface of volume 19 The present volume completes the aim of the project and should serve as an aid to students teachers researchers and practitioners interested in applied stochastic processes

**Mathematical Modeling and Validation in Physiology** Jerry J. Batzel, Mostafa Bachar, Franz Kappel, 2012-12-14 This volume synthesizes theoretical and practical aspects of both the mathematical and life science viewpoints needed for modeling of the cardiovascular respiratory system specifically and physiological systems generally Theoretical points include model design model complexity and validation in the light of available data as well as control theory approaches to feedback delay and Kalman filter applications to parameter identification State of the art approaches using parameter sensitivity are discussed for enhancing model identifiability through joint analysis of model structure and data Practical examples illustrate model development at various levels of complexity based on given physiological information The sensitivity based approaches for examining model identifiability are illustrated by means of specific modeling examples The themes presented address the current problem of patient specific model adaptation in the clinical setting where data is typically limited
