Mathematics as Sign Brian Rotman, 2000 In this book Rotman argues that mathematics is a vast and unique man made imagination machine controlled by writing It addresses both aspects mental and linguistic of this machine The essays in this volume offer an insight into Rotman's project one that has been called one of the most original and important recent contributions to the philosophy of mathematics Mathematics as Sign Brian Rotman, 2000 In this book Rotman argues that mathematics is a vast and unique man made imagination machine controlled by writing It addresses both aspects mental and linguistic of this machine The essays in this volume offer an insight into Rotman's project one that has been called one of the most original and important recent contributions to the philosophy of mathematics **Plasticity and Pathology** David Bates, Nima Bassiri, 2016-01-15 Two leading neuroscientists examine the current paradigm of the neural subject and what we can learn from neurological trauma pathology and adaption With the rise of cognitive science and the revolution in neuroscience the study of human subjects thinking feeling acting individuals ultimately focuses on the human brain In both Europe and the United States massive state funded research is focused on mapping the brain in all its remarkable complexity The metaphors employed are largely technological using a diagram of synaptic connectivity as a path to understanding human behavior But alongside this technologized discourse we find another perspective one that emphasizes the brain s essential plasticity both in development and as a response to traumas such as strokes tumors or gunshot wounds This collection of essays brings together a diverse range of scholars to investigate how the neural subject of the twenty first century came to be Taking approaches both historical and theoretical they probe the possibilities and limits of neuroscientific understandings of human experience Topics include landmark studies in the history of neuroscience the relationship between neural and technological pathologies and analyses of contemporary concepts of plasticity and pathology in cognitive neuroscience Central to the volume is a critical examination of the relationship between pathology and plasticity Because pathology is often the occasion for neural reorganization and adaptation it exists not in opposition to the brain s normal operation but instead as something intimately connected to our ways of being and understanding Giordano Bruno and the Geometry of Language Arielle Saiber, 2017-03-02 Giordano Bruno and the Geometry of Language brings to the fore a sixteenth century philosopher's role in early modern Europe as a bridge between science and literature or more specifically between the spatial paradigm of geometry and that of language Arielle Saiber examines how to invite what Bruno believed to be an infinite universe its qualities and vicissitudes into the world of language Bruno forged a system of figurative vocabularies number form space and word This verbal and symbolic system in which geometric figures are seen to underlie rhetorical figures is what Saiber calls geometric rhetoric Through analysis of Bruno s writings Saiber shows how Bruno s writing necessitates a crafting of space and is in essence a lexicon of spatial concepts. This study constitutes an original contribution both to scholarship on Bruno and to the fields of early modern scientific and literary studies It also addresses

the broader question of what role geometry has in the formation of any language and literature of any place and time The Oxford Handbook of Cognitive Archaeology, 2024-03-12 Cognitive Archaeology is a relatively young though fast growing discipline The intellectual heart of cognitive archaeology is archaeology the discipline that investigates the only direct evidence of the actions and decisions of prehistoric people Its theories and methods are an eclectic mix of psychological neuroscientific paleoneurological philosophical anthropological ethnographic comparative aesthetic and experimental theories methods and models united only by their focus on cognition The Oxford Handbook of Cognitive Archaeology is a landmark publication showcasing the theories methods and accomplishments of archaeologists who investigate the human mind including its evolutionary development its ideation thoughts and beliefs and its very nature through material forms The volume encompasses the wide spectrum of the discipline showcasing contributions from more than 50 established and emerging scholars from Europe Africa Asia Australia and the Americas Prominent among these are contributions that discuss the epistemological frameworks of both the evolutionary and ideational approaches and the leading theories that ground interpretations Significantly the majority of chapters deliver substantive contributions that analyze specific examples of material culture from the oldest known stone tools to ceramic and rock art traditions of the recent millennium These examples include the gamut of methods and techniques including typology replication studies cha nes operatoires neuroarchaeology ethnographic comparison and the direct historical approach In addition the book begins with retrospective essays by several of the pioneers of cognitive archaeology presenting a broad range of state of the art investigations into cognitive abilities tackling thorny issues like the cognitive status of Neandertals and concluding with speculative essays about the future of an archaeology of mind and of the mind itself **S(zp, Zp)** Roy Wagner, 2009 S zp zp performs an innovative analysis of one of modern logic s most celebrated cornerstones the proof of G del s first incompleteness theorem The book applies the semiotic theories of French post structuralists such as Julia Kristeva Jacques Derrida and Gilles Deleuze to shed new light on a fundamental question how do mathematical signs produce meaning and make sense S zp zp analyses the text of the proof of G del s result and shows that mathematical language like other forms of language enjoys the full complexity of language as a process with its embodied genesis constitutive paradoxical forces and unbounded shifts of meaning These effects do not infringe on the logico mathematical validity of G del s proof Rather they belong to a mathematical unconscious that enables the successful function of mathematical texts for a variety of different readers S zp zp breaks new ground by synthesising mathematical logic and post structural semiotics into a new form of philosophical fabric and offers an original way of bridging the gap between the two cultures **Non-Representational Theory** Nigel Thrift, 2008-03-25 This astonishing book presents a distinctive approach to the politics of everyday life Ranging across a variety of spaces in which politics and the political unfold it questions what is meant by perception representation and practice with the aim of valuing the fugitive practices that exist on the margins of the known It revolves around three key

functions It introduces the rather dispersed discussion of non representational theory to a wider audience provides the basis for an experimental rather than a representational approach to the social sciences and humanities begins the task of constructing a different kind of political genre A groundbreaking and comprehensive introduction to this key topic Thrift's outstanding work brings together further writings from a body of work that has come to be known as non representational theory This noteworthy book makes a significant contribution to the literature in this area and is essential reading for researchers and postgraduates in the fields of social theory sociology geography anthropology and cultural studies The Great Barrier Reef James Bowen, Margarita Bowen, 2011-02-17 One of the world's natural wonders the Great Barrier Reef stretches more than 2000 kilometres in a maze of coral reefs and islands along Australia's north eastern coastline Now unfolding the fascinating story behind its mystique this 2002 book provides for the first time a comprehensive cultural and ecological history of European impact from early voyages of discovery to developments in Reef science and management Incisive and a delight to read in its thorough account of the scientific social and environmental consequences of European impact on the world's greatest coral reef system this extraordinary book is sure to become a classic Multimodality Eija Ventola, Cassily Charles, Martin Kaltenbacher, 2004-01-01 This volume sign posts several paths of multimodality research and theory building today The chapters represent a cross section of current perspectives on multimodal discourse with a special focus on theoretical and methodological issues mode hierarchies modelling semiotic resources as multiple semiotic systems multimodal corpus annotation In addition it discusses a wide range of applications for multimodal description in fields like mathematics entertainment education museum design medicine and translation

Diagramming Devotion Jeffrey F. Hamburger,2020-09-21 During the European Middle Ages diagrams provided a critical tool of analysis in cosmological and theological debates In addition to drawing relationships among diverse areas of human knowledge and experience diagrams themselves generated such knowledge in the first place In Diagramming Devotion Jeffrey F Hamburger examines two monumental works that are diagrammatic to their core a famous set of picture poems of unrivaled complexity by the Carolingian monk Hrabanus Maurus devoted to the praise of the cross and a virtually unknown commentary on Hrabanus s work composed almost five hundred years later by the Dominican friar Berthold of Nuremberg Berthold s profusely illustrated elaboration of Hrabnus translated his predecessor s poems into a series of almost one hundred diagrams By examining Berthold of Nuremberg s transformation of a Carolingian classic Hamburger brings modern and medieval visual culture into dialogue traces important changes in medieval visual culture and introduces new ways of thinking about diagrams as an enduring visual and conceptual model Opening the Research Text Elizabeth de Freitas, Kathleen Nolan, 2007-12-19 In this chapter we interrogate the debate between mathematicians and mathematics educators This debate is widely recognized in the United States for instance where the term math wars is often used in reference to the heated disagreements between mathematicians and mathematics edu tors Such recognition might suggest

that this topic itself has relevance both for the academy and for educational policy pertaining to mathematics edu tion We propose to locate this debate unavoidably whenever and wherever mathematics education is written Our aim is to show how the debate itself gives rise to the inscription mathematics education Indeed we contend that mathematics education cannot be defined outside of or prior to the debate for it is precisely through the debate that it is constituted as a domain for 1 deliberation The debate is more primordial than any epist m or domain implied by it In other words we argue that mathematics and mathematics education do not exist epistemically prior to the debate In order to engage this issue we consider a transcription of a panel debate 2 between mathematicians and mathematics educators held in Brazil in 1998 There is at least a double meaning for the word debate it may mean a meeting having a beginning and an end well localized in space and time and with a specific proposal or focus as in the following sentence I am going to see on TV the debate between Bush and Blair tomorrow at 5 pm From Energy to Information Bruce Clarke, Linda Dalrymple Henderson, 2002 This book offers an innovative examination of the interactions of science and technology art and literature in the nineteenth and twentieth centuries Scholars in the history of art literature architecture computer science and media studies focus on five historical themes in the transition from energy to information thermodynamics electromagnetism inscription information theory and virtuality Different disciplines are grouped around specific moments in the history of science and technology in order to sample the modes of representation invented or adapted by each field in response to newly developed scientific concepts and models By placing literary fictions and the plastic arts in relation to the transition from the era of energy to the information age this collection of essays discovers unexpected resonances among concepts and materials not previously brought into juxtaposition In particular it demonstrates the crucial centrality of the theme of energy in modernist discourse Overall the volume develops the scientific and technological side of the shift from modernism to postmodernism in terms of the conceptual crossover from energy to information The contributors are Christoph Asendorf Ian F A Bell Robert Brain Bruce Clarke Charlotte Douglas N Katherine Hayes Linda Dalrymple Henderson Bruce J Hunt Douglas Kahn Timothy Lenoir W J T Mitchell Marcos Novak Edward Shanken Richard Shiff David Tomas Sha Xin Wei and Norton Wise The Cambridge Companion to Literature and Science Steven Meyer, 2018-05-03 In 1959 C P Snow lamented the presence of what he called the two cultures the apparently unbridgeable chasm of understanding and knowledge between modern literature and modern science In recent decades scholars have worked diligently and often with great ingenuity to interrogate claims like Snow s that represent twentieth and twenty first century literature and science as radically alienated from each other The Cambridge Companion to Literature and Science offers a roadmap to developments that have contributed to the demonstration and emergence of reciprocal connections between the two domains of inquiry Weaving together theory and empiricism individual chapters explore major figures Shakespeare Bacon Emerson Darwin Henry James William James Whitehead Einstein Empson and McClintock major genres and modes of writing fiction science fiction non fiction prose

poetry and dramatic works and major theories and movements pragmatism critical theory science studies cognitive science ecocriticism cultural studies affect theory digital humanities and expanded empiricisms This book will be a key resource for scholars graduate students and undergraduate students alike The Routledge Handbook of Language and Science David R. Gruber, Lynda C. Olman, 2019-11-28 The Routledge Handbook of Language and Science provides a state of the art volume on the language of scientific processes and communications This book offers comprehensive coverage of socio cultural approaches to science as well as analysing new theoretical developments and incorporating discussions about future directions within the field Featuring original contributions from an international range of renowned scholars as well as academics at the forefront of innovative research this handbook identifies common objects of inquiry across the areas of rhetoric sociolinguistics communication studies science and technology studies and public understanding of science covers the four key themes of power pedagogy public engagement and materiality in relation to the study of scientific language and its development uses qualitative and quantitative approaches to demonstrate how humanities and social science scholars can go about studying science details the meaning and purpose of socio cultural approaches to science including the impact of new media technologies analyses the history of the field and how it positions itself in relation to other areas of study Ushering the study of language and science toward a more interdisciplinary diverse communal and ecological future The Routledge Handbook of Language and Science is an essential reference for anyone with an interest in this area **Incorporated** Hélène Mialet, 2024-05-31 These days the idea of the cyborg is less the stuff of science fiction and more a reality as we are all in one way or another constantly connected extended wired and dispersed in and through technology One wonders where the individual the person the human and the body are or alternatively where they stop These are the kinds of questions H l ne Mialet explores in this fascinating volume as she focuses on a man who is permanently attached to assemblages of machines devices and collectivities of people Stephen Hawking Drawing on an extensive and in depth series of interviews with Hawking his assistants and colleagues physicists engineers writers journalists archivists and artists Mialet reconstructs the human material and machine based networks that enable Hawking to live and work She reveals how Hawking who is often portrayed as the most singular individual rational and bodiless of all is in fact not only incorporated materialized and distributed in a complex nexus of machines and human beings like everyone else but even more so Each chapter focuses on a description of the functioning and coordination of different elements or media that create his presence agency identity and competencies Attentive to Hawking's daily activities including his lecturing and scientific writing Mialet s ethnographic analysis powerfully reassesses the notion of scientific genius and its associations with human singularity This book will fascinate anyone interested in Stephen Hawking or an extraordinary life in science Theories in and of Mathematics Education Angelika Bikner-Ahsbahs, Andreas Vohns, Oliver Schmitt, Regina Bruder, Willi Dörfler, 2016-08-05 This survey provides an overview of German meta discourse on theories and mathematics education as a scientific discipline from

the 1970s to the 1990s Two theory strands are offered a semiotic view related to Peirce and Wittgenstein presented by Willibald D rfler and the theory of learning activity by Joachim Lompscher presented by Regina Bruder and Oliver Schmitt By networking the two theoretical approaches in a case study of learning fractions it clarifies the nature of the two theories how they can be related to inform practice and renew TME issues for mathematics education as a scientific discipline Hans Georg Steiner initiated the first of five international conferences on Theories of Mathematics Education TME to advance the founding of mathematics education as a scientific discipline and subsequently German researchers have continued to focus on TME topics but within various theory strands **Arguing with Numbers** James Wynn, G. Mitchell Reyes, 2021-04-15 As discrete fields of inquiry rhetoric and mathematics have long been considered antithetical to each other That is if mathematics explains or describes the phenomena it studies with certainty persuasion is not needed. This volume calls into question the view that mathematics is free of rhetoric Through nine studies of the intersections between these two disciplines Arguing with Numbers shows that mathematics is in fact deeply rhetorical Using rhetoric as a lens to analyze mathematically based arguments in public policy political and economic theory and even literature the essays in this volume reveal how mathematics influences the values and beliefs with which we assess the world and make decisions and how our worldviews influence the kinds of mathematical instruments we construct and accept In addition contributors examine how concepts of rhetoric such as analogy and visuality have been employed in mathematical and scientific reasoning including in the theorems of mathematical physicists and the geometrical diagramming of natural scientists Challenging academic orthodoxy these scholars reject a math equals truth reduction in favor of a more constructivist theory of mathematics as dynamic evolving and powerfully persuasive By bringing these disparate lines of inquiry into conversation with one another Arguing with Numbers provides inspiration to students established scholars and anyone inside or outside rhetorical studies who might be interested in exploring the intersections between the two disciplines In addition to the editors the contributors to this volume are Catherine Chaput Crystal Broch Colombini Nathan Crick Michael Dreher Jeanne Fahnestock Andrew C Jones Joseph Little and Edward Schiappa Uncommon Contexts: Encounters between Science and Literature, 1800-1914 Ben Marsden, Hazel Hutchinson, Ralph O'Connor, 2016-09-12 Britain in the long nineteenth century developed an increasing interest in science of all kinds Whilst poets and novelists took inspiration from technical and scientific innovations those directly engaged in these new disciplines relied on literary techniques to communicate their discoveries to a wider audience The essays in this collection uncover this symbiotic relationship between literature and science at the same time bridging the disciplinary gulf between the history of science and literary studies Specific case studies include the engineering language used by Isambard Kingdom Brunel the role of physiology in the development of the sensation novel and how mass communication made people lonely **The Value of Labor** Martha Lampland, 2016-09-15 At the heart of today s fierce political anger over income inequality is a feature of capitalism that Karl Marx famously obsessed over the commodification

of labor Most of us think wage labor economics is at odds with socialist thinking but as Martha Lampland explains in this fascinating look at twentieth century Hungary there have been moments when such economics actually flourished under socialist regimes Exploring the region s transition from a capitalist to a socialist system and the economic science and practices that endured it she sheds new light on the two most polarized ideologies of modern history Lampland trains her eye on the scientific claims of modern economic modeling using Hungary s unique vantage point to show how theories policies and techniques for commodifying agrarian labor that were born in the capitalist era were adopted by the socialist regime as a scientifically designed wage system on cooperative farms Paying attention to the specific historical circumstances of Hungary she explores the ways economists and the abstract notions they traffic in can both shape and be shaped by local conditions and she compellingly shows how labor can be commodified in the absence of a labor market The result is a unique account of economic thought that unveils hidden but necessary continuities running through the turbulent twentieth century

Realizing Reason Danielle Macbeth,2014-03-27 Realizing Reason pursues three interrelated themes First it traces the essential moments in the historical unfolding from the ancient Greeks through Descartes Kant and developments in the nineteenth century to the present that culminates in the realization of pure reason as a power of knowing Second it provides a cogent account of mathematical practice as a mode of inquiry into objective truth And finally it develops and defends a new conception of our being in the world one that builds on and transforms the now standard conception according to which our experience of reality arises out of brain activity due in part to merely causal impacts on our sense organs Danielle Macbeth shows that to achieve an adequate understanding of the striving for truth in the exact sciences we must overcome this standard conception and that the way to do that is through a more adequate understanding of the nature of mathematical practice and the profound transformations it has undergone over the course of its history the history through which reason is first realized as a power of knowing Because we can understand mathematical practice only if we attend to the systems of written signs within which to do mathematics Macbeth provides an account of the nature and role of written notations specifically of the principal systems that have been developed within which to reason in mathematics Euclidean diagrams the symbolic language of arithmetic and algebra and Frege's concept script Begriffsschrift
