Multi Criteria Decision Making

Bumho Son

College of Business Administration, CAU

Overview

- **Study of problems with several criteria, i.e., multiple criteria, instead of a single objective when making a decision**
- **Three techniques discussed: goal programming, the analytical hierarchy process and scoring models**
- **Goal programming**
  - Variation of linear programming considering more than one objective (goals) in the objective function
- **Analytical hierarchy process**
  - Develops a score for each decision alternative based on comparisons of each under different criteria reflecting the decision makers' preferences
- **Scoring models**
  - Based on a relatively simple weighted scoring technique

Mathematics For Decision Making 2vol:

   Decision Making Process Denis Bouyssou,Didier Dubois,Henri Prade,Marc Pirlot,2013-05-10 This book provides an overview of the main methods and results in the formal study of the human decision making process as defined in a relatively wide sense A key aim of the approach contained here is to try to break down barriers between various disciplines encompassed by this field including psychology economics and computer science All these approaches have contributed to progress in this very important and much studied topic in the past but none have proved sufficient so far to define a complete understanding of the highly complex processes and outcomes This book provides the reader with state of the art coverage of the field essentially forming a roadmap to the field of decision analysis The first part of the book is devoted to basic concepts and techniques for representing and solving decision problems ranging from operational research to artificial intelligence Later chapters provide an extensive overview of the decision making process under conditions of risk and uncertainty Finally there are chapters covering various approaches to multi criteria decision making Each chapter is written by experts in the topic concerned and contains an extensive bibliography for further reading and reference   Intelligent Mathematics: Computational Analysis George A. Anastassiou,2011-03-19 Knowledge can be modeled and computed using computational mathematical methods then lead to real world conclusions The strongly related to that Computational Analysis is a very large area with lots of applications This monograph includes a great variety of topics of Computational Analysis We present probabilistic wavelet approximations constrained abstract approximation theory shape preserving weighted approximation non positive approximations to definite integrals discrete best approximation approximation theory of general Picard singular operators including global smoothness preservation property fractional singular operators We also deal with non isotropic general Picard singular multivariate operators and q Gauss Weierstrass singular q integral operators We talk about quantitative approximations by shift invariant univariate and multivariate integral operators nonlinear neural networks approximation convergence with rates of positive linear operators quantitative approximation by bounded linear operators univariate and multivariate quantitative approximation by stochastic positive linear operators on univariate and multivariate stochastic processes We further present right fractional calculus and give quantitative fractional Korovkin theory of positive linear operators We also give analytical inequalities fractional Opial inequalities fractional identities and inequalities regarding fractional integrals We further deal with semi group operator approximation simultaneous Feller probabilistic approximation We also present Fuzzy singular operator approximations We give transfers from real to fuzzy approximation and talk about fuzzy wavelet and fuzzy neural networks approximations fuzzy fractional calculus and fuzzy Ostrowski inequality We talk about discrete fractional calculus nabla discrete fractional calculus and inequalities We study the q inequalities and q fractional inequalities We further study time scales delta and nabla approaches duality principle and inequalities We introduce delta and nabla time scales fractional calculus and inequalities We finally study convergence with

Wolpert,2011-11-13 Prescriptive Bayesian decision making has reached a high level of maturity and is well supported algorithmically However experimental data shows that real decision makers choose such Bayes optimal decisions surprisingly infrequently often making decisions that are badly sub optimal So prevalent is such imperfect decision making that it should be accepted as an inherent feature of real decision makers living within interacting societies To date such societies have been investigated from an economic and gametheoretic perspective and even to a degree from a physics perspective However little research has been done from the perspective of computer science and associated disciplines like machine learning information theory and neuroscience This book is a major contribution to such research Some of the particular topics addressed include How should we formalise rational decision making of a single imperfect decision maker Does the answer change for a system of imperfect decision makers Can we extend existing prescriptive theories for perfect decision makers to make them useful for imperfect ones How can we exploit the relation of these problems to the control under varying and uncertain resources constraints as well as to the problem of the computational decision making What can we learn from natural engineered and social systems to help us address these issues Mathematical Economics Kelvin Lancaster,1987-01-01 Complete rigorous expositions of economic models analyzed primarily according to their mathematical properties Optimizing theory static and dynamic models mathematical reviews more Modern Mathematics for the Engineer: First Series Edwin F.
