Quantification in Linguistics and Text Analysis Emmerich Kelih,Ján Mačutek,Michaela Koščová,2025-05-06 This volume contains the most important theoretical and methodological works of Gabriel Altmann 1931 2019 He is the founder of a specific school of quantitative linguistics which focuses on the statistical analysis and interrelationship of linguistic features and characteristics His approach concentrates on the construction of a general theory of linguistics The theory is based on the relevance of linguistic laws Zipf s Menzerath s and Piotrowski s and concepts of language as a self regulating system In contrast to approaches where quantitative methods are used as standard methodological tools Altmann favours a holistic and epistemological view of problems of quantification of linguistic and textual phenomena *New Horizons in Mathematics and Science Education* ,2001 **Subject Index of Modern Books Acquired** British Library,1918 *Motifs in Language and Text* Haitao Liu,Junying Liang,2017-03-20 The edited volume *Motifs in Language and Text* is the first collection of original research in the area of the quantitative analysis of motifs It hosts a collection of contributions that give insight to linguistic motifs theoretically across different languages text genres and structural levels such as lexical syntactic semantic etc and also to the tentative efforts upon the practical applications of the linguistic motifs School and Society ,1917 *School and Society* James McKeen Cattell,Raymond Walters,1917 *Mathematics and 21st Century Biology* National Research Council,Division on Engineering and Physical Sciences,Board on Mathematical Sciences and Their Applications,Committee on Mathematical Sciences Research for DOE's Computational Biology,2005-06-16 The exponentially increasing amounts of biological data along with comparable advances in computing power are making possible the construction of quantitative predictive biological systems models This development could revolutionize those biology based fields of science To assist this transformation the U S Department of Energy asked the National Research Council to recommend mathematical research activities to enable more effective use of the large amounts of existing genomic information and the structural and functional genomic information being created The resulting study is a broad scientifically based view of the opportunities lying at the mathematical science and biology interface The book provides a review of past successes an examination of opportunities at the various levels of biological systems from molecules to ecosystems an analysis of cross cutting themes and a set of recommendations to advance the mathematics biology connection that are applicable to all agencies funding research in this area *Researching the Socio-Political Dimensions of Mathematics Education* Paola Valero,Robyn Zevenbergen,2006-04-11 Mathematics education research as a discipline is situated at the confluence of an array of diffuse seemingly incommensurable and radically divergent discourses Research claims that have grown out of mathematics education are wide ranging and antagonistic rather than circumscribed by hidebound disciplinary frames While there has never been a

unified totalising discipline of knowledge labelled mathematics education research and while it has always been a contested terrain it is fair to say that the master paradigm out of which this field has been generated has been that of cognitive psychology Mainstream mathematics education knowledges refracting the master discourse of psychology whereby cognition serves as the central privileged and defining concept clearly delimits its possibilities for serving as a social tool of democratic transformation The central point of departure of this new collection is that mathematics education research is insufficiently univocal to support the type of uncompromising interpretation that cognitive psychologists would bring to it The hallmark contribution of this pathbreaking volume edited by Paola Valero and Robyn Zevenbergen is the paradigmatic shift the authors have effected in the field of mathematics education research taking up a position at the faultline of socio cultural analysis and critical pedagogy

Handbook of Reading Research, Volume IV Michael L. Kamil, P. David Pearson, Elizabeth Birr Moje, Peter Afflerbach, 2011-03-17 The Handbook of Reading Research is the research Handbook for the field Each volume has come to define the field for the period of time it covers Volume IV follows in this tradition The editors extensively reviewed the reading research literature since the publication of Volume III in 2000 as portrayed in a wide array of research and practitioner based journals and books to identify the themes and topics covered As in previous volumes the focus is on reading research rather than a range of literate practices When taken as a set the four volumes provide a definitive history of reading research Volume IV brings the field authoritatively and comprehensively up to date

Psychology and Mathematics Education Gila Hanna, Laura Macchi, Karin Binder, Laura Martignon, Katharina Loibl, 2023-09-05 Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems Thus it is par excellence a model of rational inquiry Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades Indeed the Enlightenment view of the rational human mind that reasons makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century Cognitive psychologists discovered that humans thoughts and actions often deviate from rules imposed by strict normative theories of inference Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather satisfice even when solving problem This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program In Simon s bounded rationality and its direct descendant ecological rationality

rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e g transitivity
