Sharpening Everyday Mental/thinking Skills Through Mathematics Problem Solving And Beyond Alfred S Posamentier, Hans Humenberger, 2024-01-22 Mathematics is a subject taught from kindergarten through to high school and yet it is the one subject that most adults are almost proud to admit to not having been very good at and therefore tend to avoid it where they can However one of the key factors in mathematics is its ability to enable us to solve everyday problems When we consider the worst case scenario of the situation it is analogous to solving a mathematical problem by considering extremes Or we might consider the best path to take from point A to point B where geometric relationships can be helpful This book is intended to demonstrate a variety of neglected aspects of mathematics in order to demonstrate the power and beauty of the field of mathematics beyond where most people students and teachers believe is possible The chapters of the book explore a multitude of topics unusual arithmetic calculations and shortcuts entertaining and instructional problem solving strategies unusual applications of algebra and how geometry allows us to better appreciate physical relationships Only a basic mathematical knowledge is needed to understand these topics and problems however the book also demonstrates that armed with even this level of understanding our mathematical skills far exceed what we learned at school The final chapter is the most challenging and explores a curious problem solving technique

All Things Being Equal John Mighton, 2020 From the award winning founder of JUMP Math comes a road map for success in math study and an impassioned call for a more just society where intellectual achievement is available to the many instead of the privileged few For two decades John Mighton has developed strategies for fostering intellectual potential in all children through learning math Math Mighton says provides us with mental tools of incredible power When we learn math we learn to see patterns to think logically and systematically to draw analogies to perceive risk to understand cause and effect among many other critical skills Yet we tolerate and in fact expect a vast performance gap in math among students and live in a world where many adults aren't equipped with these crucial tools This learning gap is unnecessary dangerous and tragic he cautions and it has led us to a problem of intellectual poverty which is apparent everywhere in fake news political jargon floundering economies even in erroneous medical diagnoses In *All Things Being Equal* Mighton posits that math study is an ideal starting point to break down social inequality and empower individuals to build a smarter kinder more equitable world He offers

scientifically proven step by step teaching methods and shows that a focus on the beauty of learning results in humans with the ability to make wiser choices and to appreciate the interconnectedness of things rather than the rewards of being better than one's peers Bringing together the latest cognitive research and incremental learning strategies including brilliant insights on analogies as the keys to creativity Mighton goes deep into the classroom and beyond to offer a hopeful and urgent vision for a numerate society *Math Power*, 1992

The Myth of Ability John Mighton, 2003-05-01 John Mighton's revolutionary bestselling guide to how every child can learn math through his groundbreaking JUMP program A student in a remedial class who couldn't count by twos is now in an academic program a year ahead of her grade level An entire Grade 3 class including so-called slow learners scores over 90% on a Grade 6-7 math test These are just two of mathematician John Mighton's many success stories since he started JUMP Junior Undiscovered Math Prodigies a not-for-profit organization providing free math tutoring for elementary level students from low-income homes In *The Myth of Ability* John Mighton tells JUMP's fascinating story and explains its teaching method with lots of simple examples **Mathland** L. C. Norman, 1994
