Student and Teacher Writing Motivational Beliefs Steve Graham,Gary A. Troia,Gustaf Bernhard Uno Skar,2024-06-21 The study of students motivational beliefs about writing and how such beliefs influence writing has increased since the publication of John

Hays 1996 model of writing This model emphasized that writers motivational beliefs influence how and what they write Likewise increased attention has been devoted in recent years to how teachers motivational beliefs about writing especially their efficacy to teach writing impact how writing is taught and how students progress as writers As a result there is a need to bring together in a Research Topic studies that examine the role and influence of writing beliefs Historically the psychological study of writing has focused on what students write or the processes they apply when writing Equally important but investigated less often are studies examining how writing is taught and how teachers efforts contribute to students writing What has been less prominent in the psychological study of writing are the underlying motivational beliefs that drive or inhibit students writing or serve as catalysts for teachers actions in the classroom when teaching writing This Research Topic will bring together studies that examine both students and teachers motivational beliefs about teaching writing This will include studies examining the operation of such beliefs how they develop cognitive and affective correlates how writing motivational beliefs can be fostered and how they are related to students writing achievement By focusing on both students and teachers beliefs the Research Topic will provide a more nuanced and broader picture of the role of motivation beliefs in writing and writing instruction This Research Topic includes papers that address students motivational beliefs about writing teachers motivational beliefs about writing or teaching writing Students motivational beliefs about writing include beliefs about the value and utility of writing writing competence attitudes toward writing goal orientation motives for writing identity epistemological underpinnings writing and attributions for success failure as examples Teacher motivational include these same judgements as well as beliefs about their preparation and their students competence and progress as writers to provide additional examples This Research Topic is interested in papers that examine how such beliefs operate develop are related to other cognitive and affective variables how they are impacted by instruction and how they are related to students writing performance Submitted studies can include original research both quantitative qualitative or mixed methods meta analysis and reviews of the literature

Psychology and Mathematics Education Gila Hanna, Laura Macchi, Karin Binder, Laura Martignon, Katharina Loibl, 2023-09-05 Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems Thus it is par excellence a model of rational inquiry Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades Indeed the Enlightenment view of the rational human mind that reasons makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century Cognitive psychologists discovered that humans thoughts and actions often deviate from rules imposed by strict normative theories of inference Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but

rather satisfy even when solving problem This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program In Simon's bounded rationality and its direct descendant ecological rationality rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e g transitivity

The Life of Primes in 37 Episodes Jean-Marie De Koninck, Nicolas Doyon, 2021-05-19 This book is about the life of primes Indeed once they are defined primes take on a life of their own and the mysteries surrounding them begin multiplying just like living cells reproduce themselves and there seems to be no end to it This monograph takes the reader on a journey through time providing an accessible overview of the numerous prime number theory problems that mathematicians have been working on since Euclid Topics are presented in chronological order as episodes These include results on the distribution of primes from the most elementary to the proof of the famous prime number theorem The book also covers various primality tests and factorisation algorithms It is then shown how our inability to factor large integers has allowed mathematicians to create today's most secure encryption method Computer science buffs may be tempted to tackle some of the many open problems appearing in the episodes Throughout the presentation the human side of mathematics is displayed through short biographies that give a glimpse of the lives of the people who contributed to the life of primes Each of the 37 episodes concludes with a series of problems many with solutions that will assist the reader in gaining a better understanding of the theory
