Methods For Direction Finding Of Direct Sequence Spread Spectrum Signals:

Methods for Direction-Finding of Direct-Sequence Spread-Spectrum Signals Magnus Finne,1996 The use of spread spectrum signals has increased dramatically in military radio communications This report locates methods for direction finding direct sequence spread spectrum DS SS signals digital methods are of special interest A literature survey was conducted to see if there are any known methods Investigated if a DS SS detection method using a square law detector can be extended to direction finding By use of computer simulations show the performance of the methods found Benefits and problems are also discussed

Serial Communication Protocols and Standards Dawoud Shenouda Dawoud,Peter Dawoud,2022-09-01 Data communication standards are comprised of two components The protocol and Signal data port specifications for the devices involved The protocol describes the format of the message and the meaning of each part of the message To connect any device to the bus an

external device must be used as an interface which will put the message in a form which fulfills all the electrical specifications of the port. These specifications are called the Standard. The most famous such serial communication standard is the RS 232. In IT technology, Communication can be serial or parallel. Serial communication is used for transmitting data over long distances. It is much cheaper to run the single core cable needed for serial communication over a long distance than the multicore cables that would be needed for parallel communication. It is the same in wireless communication. Serial communication needs one channel while parallel needs multichannel. Serial Communication can also be classified in many other ways, for example, synchronous and asynchronous; it can also be classified as simplex, duplex, and half duplex. Because of the wide spread of serial communication from home automation to sensor and controller networks, there is a need for a very large number of serial communication standards and protocols. These have been developed over recent decades and range from the simple to the highly complicated. This large number of protocols was necessary to guarantee the optimum performance for the targeted applications. It is important for communication engineers to have enough knowledge to match the right protocol and standard with the right application. The main aim of this book is to provide the reader with that knowledge. The book also provides the reader with detailed information about Serial Communication, Universal Asynchronous Receiver Transmitter, UART, Universal Synchronous Asynchronous Receiver Transmitter, USART, Serial Peripheral Interface, SPI, eSPI, Universal Serial Bus, USB, Wi-Fi, WiMax, Insteon. The details of each technology, including specification, operation, security-related matters, and many other topics, are covered. The book allocates three chapters to the main communication standards. These chapters cover everything related to the most famous standard, RS 232, and all its variants. Other protocols such as I2C, CAN, ZigBee, Z-Wave, Bluetooth, and others are the subject of the authors' separate book, *Microcontroller and Smart Home Networks*. Radio Monitoring Anatoly Rembovsky, Alexander Ashikhmin, Vladimir Kozmin, Sergey M. Smolskiy, 2009-07-24. *Radio Monitoring: Problems, Methods, and Equipment* offers a unified approach to fundamental aspects of Automated Radio Monitoring (ARM). The authors discuss the development, modeling, design, and manufacture of ARM systems. Data from established and recent research are presented, and recommendations are made on methods and approaches for solving common problems in ARM. The authors also provide classification and detailed descriptions of modern, high-efficient hardware, software, ARM equipment, including the equipment for detection, radio direction finding, parameters measurement, and their analysis, and the identification and localization of the electromagnetic field sources. Examples of ARM equipment structure, applications, and software are provided to manage a variety of complicated interference environments in the industrial centers, inside of the buildings, and in the open terrain. This book provides a reference for professionals and researchers interested in deploying ARM technology as a tool for solving problems from radio frequency spectrum usage control. *Scientific and Technical Aerospace Reports*, 1995. Masters Theses in the Pure and Applied Sciences Wade H. Shafer, 2012-12-06. *Masters Theses in the Pure and Applied Sciences* was first conceived, published, and disseminated by the

Center for Information and Numerical Data Analysis and Synthesis CINDAS at Purdue University in 1957 starting its coverage of theses with the academic year 1955 Beginning with Volume 13 the printing and dissemination phases of the activity were transferred to University Microfilms Xerox of Ann Arbor Michigan with the thought that such an arrangement would be more beneficial to the academic and general scientific and technical community After five years of this joint undertaking we had concluded that it was in the interest of all concerned if the printing and distribution of the volumes were handled by an international publishing house to assure improved service and broader dissemination Hence starting with Volume 18 Masters Theses in the Pure and Applied Sciences has been disseminated on a worldwide basis by Plenum Publishing Corporation of New York and in the same year the coverage was broadened to include Canadian universities All back issues can also be ordered from Plenum We have reported in Volume 39 thesis year 1994 a total of 13 953 thesis titles from 21 Canadian and 159 United States universities We are sure that this broader base for these titles reported will greatly enhance the value of this important annual reference work While Volume 39 reports theses submitted in 1994 on occasion certain universities do report theses submitted in previous years but not reported at the time
