Methods presented cover molecular genetic and biochemical approaches to ciliary function in model organisms. **Cilia: Motors and Regulation**, 2009-12-01. Along with its companion volume on axonemal dynein mediated motility this book provides researchers with a comprehensive and up to date source of methods for the analysis cilia and flagella focusing primarily on approaches that have been devised or significantly extended since the last volume of *Methods in Cell Biology* on this topic volume 47 1995. Edited by Stephen M King and Gregory J Pazour the newest installment of this highly acclaimed serial will serve as an essential addition to the study of cilia and flagella. Covers protocols for cilia and flagella across systems and species. Both classic and state of the art methods readily adaptable across model systems and designed to last the test of time. Relevant to clinicians interested in respiratory disease male infertility and other syndromes who need to learn biochemical molecular and genetic approaches to studying cilia flagella and related structures. **Electron Microscopy of Model Systems**, 2010-09-24. The volume covers the preparation and analysis of model systems for biological electron microscopy. The volume has chapters about prokaryotic as well as eukaryotic systems that are used as so called model organisms in modern cell biology. These systems include the most popular systems such as budding and fission yeast the roundworm *C. elegans* the fly *Drosophila* zebrafish mouse and *Arabidopsis* but also organisms that are less frequently used in cell biology such as *Chlamydomonas* *Dictyostelium* *Trypanosoma* flatworms *Axolotl* and others. In addition tissues and tissue culture systems are also covered. These systems are used for very diverse areas of cell biology such as cell division abscission intracellular transport cytoskeletal organization tissue regeneration and others. Moreover this issue presents the currently most important methods for the preparation of biological specimens. This volume however is not a classic EM methods book. The methods are not the main focus of this issue. The main goal here is to cover the methods in the context of the specific requirements of specimen preparation for each model organism or systems. This will be the first compendium covering the various aspects of sample preparation of very diverse biological systems. Covers the preparation and analysis of model systems for biological electron microscopy. Includes the most popular systems but also organisms that are less frequently used in cell biology. Presents the currently most important methods for the preparation of biological specimens.
