Methods in Enzymology Vol. 13 J. M. Lowenstein, 1960 *Photosynthesis Bibliography volume 13* 1982 Zdenek Sesták, J. Catský, 2013-11-11 The bibliography includes papers in all fields of photosynthesis research from studies of model biochemical and biophysical systems of the photosynthetic mechanism to primary production studied by the so called growth analysis In addition to papers devoted entirely to photosynthesis papers on other topics are included if they contain data on photosynthetic activity photorespiration chloroplast structure chlorophyll and carotenoid synthesis and destruction etc or if they contain valuable methodological information measurement of selected environmental factors leaf area etc In many branches it has been difficult to define the limits of interest for photosynthesis researchers This problem has arisen e.g. in topics dealing with the transfer of gases where in addition to the papers on carbon dioxide transfer some papers on water vapour transfer are included these being of general application or bringing new approaches On the other hand many papers dealing with the anatomy and physiology of stomata have been omitted if the aspect of carbon dioxide or water vapour exchange has not been discussed This volume contains references to papers published in the year 1982 and similarly to preceding volumes also addenda including references published in the preceding period i.e. 1966 to 1981 The numbers of the additional references are labelled with an asterisk in the list of references The Enzymes, 1972-12-15 The Enzymes

Jackson, 2012-12-06

Modern Methods of Plant Analysis When the handbook Modern Methods of Plant Analysis was first introduced in 1954 the considerations were 1 the dependence of scientific progress in biology on the improvement of existing and the introduction of new methods 2 the inavailability of many new analytical methods concealed in specialized journals not normally accessible to experimental plant biologists 3 the fact that in the methods sections of papers the description of methods is frequently so compact or even sometimes so incomplete that experiments are difficult to reproduce These considerations still stand today The series was highly successful seven volumes appearing between 1956 and 1964 Since today there is still a demand for the old series the publisher has decided to resume publication of Modern Methods of Plant Analysis It is hoped that the New Series will be as acceptable to those working in plant sciences and related fields as the early volumes undoubtedly were It is difficult to single out the major reasons for success of any publication but we believe that the methods published in the first series were up to date at the time and the descriptions as applied to plant material so complete in themselves that there was little need to consult other publications

Methods in Membrane Biology Edward D. Korn, 2013-04-17 Less than a year before this writing a Nobel Prize was shared by Albert Claude Christian de Duve and George Palade pioneers in the development of modern cell biology of which membrane biology is an integral part For many years a seemingly unbridgeable gap separated the physiologist working at the organ level from the biochemist studying the molecular composition of cell constituents and the chemical reactions that occur in water soluble extracts of cells Physiology has a long history and the disciplines epitomized by intermediary metabolism and molecular biology progressed rapidly during the 1950s and 1960s Meanwhile electron microscopists painstakingly mapped the newly discovered intracellular world of membranes organelles microtubules and microfilaments and other scientists developed techniques for the quantitative separation and characterization of these intracellular structures Thus it finally became possible to localize the many enzymes and the metabolic activities they catalyze to recognizable structures whose composition and organization can be studied We are now well on our way to bridging that gap between biochemistry and physiology to understanding how the cell functions

Biochemical Testing Jose C. Jimenez-Lopez, 2012-03-07 Biochemical testing necessitates the determination of different parameters and the identification of the main biological chemical compounds by using molecular and biochemical tools The purpose of this book is to introduce a variety of methods and tools to isolate and identify unknown bacteria through biochemical and molecular differences based on characteristic gene sequences Furthermore molecular tools involving DNA sequencing and biochemical tools based in enzymatic reactions and proteins reactivity will serve to identify genetically modified organisms in agriculture as well as for food preservation and healthcare and improvement through natural products utilization vaccination and prophylactic treatments and drugs testing in medical trials
