**The Reoviridae** Wolfgang K. Joklik, 2013-11-21 It is now just 20 years since Gomatos and his co workers at the Rockefeller University showed that the nucleic acid in reovirus particles is double stranded RNA dsRNA This discovery created great excitement for dsRNA was at that time under intense investigation as the replicative form of viral genomes consisting of single stranded RNA An equally interesting and important finding followed soon after it was found that the reovirus genome consists not of a single nucleic acid molecule but of 10 discrete segments each with its specific sequence content and each transcribed into its own messenger RNA It is clear now that these segments are genes Not surprisingly the availability of a viral genome 10 unlinked genes has permitted some unique lines of investigation in molecular biology Mammalian and avian reoviruses proved to be but the first of several viruses recognized as sharing Similarity in size and morphology and genomes consisting of 10 or 12 separate genes These viruses are distributed throughout living organisms among the natural hosts of members of this virus family are vertebrates Insects and plants Members of the Reoviridae family differ widely in the virulence that they exhibit toward their hosts For example the first discovered mammalian reovirus literally is as the name signifies a respiratory enteric orphan virus that is a virus unassociated with disease

*Nucleosides, Nucleotides and their Biological Applications* Janet L. Rideout, 2012-12-02 Nucleosides Nucleotides and Their Biological Applications contains the proceedings of the Fifth International Round Table on Nucleosides Nucleotides and Their Biological Applications held at Research Triangle Park North Carolina on October 20 22 1982 Contributors focus on the biological applications of nucleosides and nucleotides along
