Gottesman,1998-07-31 The critically acclaimed laboratory standard for more than forty years Methods in Enzymology is one of the most highly respected publications in the field of biochemistry Since 1955 each volume has been eagerly awaited frequently consulted and praised by researchers and reviewers alike More than 285 volumes have been published all of them still in print and much of the material is relevant even today truly an essential publication for researchers in all fields of life sciences Prokaryotic ABC Transporters Eukaryotic ABC Transporters Nonmammalian ABC Transport Systems Mammalian P Glycoproteins Multidrug Resistance Associated Protein Cystic Fibrosis Transmembrane Conductance Regulator Sulfonyleurea Receptor Intracellular ABC Transporters *MicroRNA Methods* John J. Rossi,2007-08-30 MicroRNAs miRNA are tiny bits of genetic material that were unknown nearly 10 years ago but now represent an exciting field of study in biology Upon their discovery researchers revealed for the first time a new mechanism by which microRNA can stop the function of messenger RNA mRNA by literally

cutting it in half interfering with the normal function of specific messenger RNAs in gene expression This expression of genes that code for essential proteins is essentially what controls whether a cell turns into a liver lung or brain cell for example Understanding what activates this process or stops it is a key to understanding the biological process and builds a foundation for advances in medicine and other fields This volume in Methods in Enzymology presents valuable methods for studying MicroRNA with three sections covering identification of MicroRNAs and their targets MicroRNA expression maturation and functional analysis and MicroRNAs and disease Methods in Methane Metabolism, Part A Amy Rosenzweig, Stephen W. Ragsdale, 2011-05-11 Produced by microbes on a large scale methane is an important alternative fuel as well as a potent greenhouse gas This volume focuses on microbial methane metabolism which is central to the global carbon cycle Both methanotrophy and methanogenesis are covered in detail Topics include isolation and classification of microorganisms metagenomics approaches biochemistry of key metabolic enzymes gene regulation and genetic systems and field measurements The state of the art techniques described here will both guide researchers in specific pursuits and educate the wider scientific community about this exciting and rapidly developing field Topics include isolation and classification of microorganisms metagenomics approaches biochemistry of key metabolic enzymes gene regulation and genetic systems and field measurements The state of the art techniques described here will both guide researchers in specific pursuits and educate the wider scientific community about this exciting and rapidly developing field Mass Spectrometry M E Rose, 2007-10-31 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general coverage of the highlights in chemistry they remain a must Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued The current list of Specialist Periodical Reports can be seen on the inside flap of this volume

Crystallization of Nucleic Acids and Proteins Arnaud Ducruix, Richard Giegé, 1999 Crystallography is the major method of determining structures of biological macromolecules yet crystallization techniques are still regarded as difficult to perform This new edition of Crystallization of Nucleic Acids and Proteins A Practical Approach continues in the vein of the first edition by providing a detailed and rational guide to producing crystals of proteins and nucleic acids of sufficient quantity and

quality for diffraction studies It has been thoroughly updated to include all the major new techniques such as the uses of molecular biology in structural biology maximizing expression systems sequence modifications to enable crystallization and the introduction of anomalous scatterers diagnostic analysis of prenucleation and nucleation by spectroscopic methods and the two dimensional electron crystallography of soluble proteins on planar lipid films As well as an introduction to crystallogenes the other topics covered are Handling macromolecular solutions experimental design seeding proceeding from solutions to crystals Crystallization in gels Crystallization of nucleic acid complexes and membrane proteins Soaking techniques Preliminary characterization of crystals in order to tell whether they are suitable for diffraction studies As with all Practical Approach books the protocols have been written by experienced researchers and are tried and tested methods The underlying theory is brought together with the laboratory protocols to provide researchers with the conceptual and methodological tools necessary to exploit these powerful techniques Crystallization of Nucleic Acids and Proteins A Practical Approach 2e will be an invaluable manual of practical crystallization methods to researchers in molecular biology crystallography protein engineering and biological chemistry

Numerical Computer Methods, Part E, 2004-06-02 The contributions in this volume emphasize analysis of experimental data and analytical biochemistry with examples taken from biochemistry They serve to inform biomedical researchers of the modern data analysis methods that have developed concomitantly with computer hardware Selected Contents A practical approach to interpretation of SVD results modeling of oscillations in endocrine networks with feedback quantifying asynchronous breathing sample entropy wavelet modeling and processing of nasal airflow traces

Arachidonic Acid in Cell Signaling Daniele Piomelli, 2013-04-17 This book is about the arachidonic acid cascade its biochemistry its pharmacology and its roles in signal transduction Arachidonic acid may serve as an intracellular second messenger in many cell types as well as precursor for biologically active molecules such as the eicosanoids a family of oxygenated metabolites that may act as second messengers or as local mediators and anandamide an endogenous cannabinoid substance Dysfunctions in the arachidonic acid cascade underlie a number of serious pathological conditions making these biochemical pathways the target for drugs of clinical value

Sphingolipid Metabolism and Cell Signaling Alfred H. Merrill, Alfred Harrison Merrill, Yusuf A. Hannun, 2000 Sphingolipids are found in all eukaryotic and in some prokaryotic organisms and provide structure for cell membranes lipoproteins and other biological materials as well as participate in the regulation of cell growth differentiation and diverse cell functions including cell cell communication cell substratum interactions and intracellular signal transduction This volume presents methods used in studying enzymes of sphingolipid biosynthesis and turnover including inhibitors of some of these enzymes genetic approaches and organic and enzymatic syntheses of sphingolipids and analogs Its companion Volume 312 will contain information on analyzing sphingolipids sphingolipid transport and trafficking and sphingolipid protein interactions and cellular targets The critically acclaimed laboratory standard for more than forty years Methods in Enzymology is one of the
