Methods in Mammalian Embryology Joseph C. Daniel, 1971      *Methods in Mammalian Reproduction* Joseph C. Jr. Daniel, 2012-12-02

*Methods in Mammalian Reproduction* presents some of the techniques for manipulating analyzing observing testing and generally experimenting with mammalian mothers and their gametes and embryos Mammalian reproduction involves an intimate relationship between mother and embryo The first 18 chapters are arranged in an order that follows a developmental sequence from oocyte to fetal organs and the remaining seven chapters deal with the maternal side of the relationship With strong focus on laboratory rodents and lagomorphs the book starts with an introduction to in vitro oocyte maturation and experimental production of mammalian parthenogenetic It goes on to describe the microtechniques in pre implantation of embryos production of chimeras techniques for early embryonic tissue separation mammalian embryo preservation by freezing and in vitro development of whole mouse embryos beyond the implantation stage Chapters 11 15 discuss the in vitro implantation of mouse blastocysts advances in rabbit embryo and in large mammal embryo cultures embryo transfer in large domestic mammals and manipulation of marsupial embryos and pouch young The following chapters cover reproduction experiments using marsupials domestic farm species and primates including humans Finally the concluding chapters tackle the use of amniocentesis in prenatal diagnosis collection and analysis of female genital tract secretions analysis of antifertility action of intrauterine devices and surgical induction of endometriosis This book will be helpful to students teachers researchers and clinical researchers who demand for more and better procedures for analysis of mammalian reproduction      Methods in Mammalian Embryology JC Daniel (Ed), 1971      *The Mammalian Preimplantation Embryo* Barry D. Bavister, 2012-12-06

With a few notable exceptions mammalian preimplantation embryos grown in vitro are likely to exhibit sub optimal or retarded development This may be manifested in different ways depending on the species and on the stage s of embryonic development that are being examined For example bovine embryos often experience difficulty in cleaving under in vitro conditions and usually cease development at about the 8 cell stage Wright and Bondioli 1981 The block to development is stage dependent embryos cultured for 24 hr from the I cell stage are much more capable of developing into viable blastocysts after transfer to oviducts than embryos cultured for 24 hr from the 4 cell stage prior to transfer Eyestone et oZ 1985 Similar problems with in vitro embryo development are encountered in other species Pig embryos can be grown up to the 4 cell stage in vitro but usually no further Davis and Day 1978 In the golden hamster in the rat and in many outbred strains of mice development of zygotes in vitro is blocked at the 2 cell stage Yanagimachi and Chang 1964 Whittingham 1975 Even with some inbred mouse strains embryo development is reduced if very early cleavage stages are used as the starting point for in vitro culture Spielmann et oZ 1980 A common finding is that embryos grown in vitro have reduced cell counts Harlow and Quinn 1982 Kane 1985 and their viability is reduced Bowman and McLaren 1970 Papaioannou and Ebert 1986 compared to equivalent developmental stages recovered from mated animals      **Bibliography**
