Biology of Serpins James Whisstock, Phillip Bird, 2011-06-11 Serpins are a group of proteins with similar structures that were first identified as a set of proteins able to inhibit proteases. The acronym serpin was originally coined because many serpins inhibit chymotrypsin like serine proteases. This volume of *Methods in Enzymology* is split into 2 parts and comprehensively covers the subject.

RNA Turnover in Eukaryotes: Analysis of Specialized and Quality Control RNA Decay Pathways Lynne E. Maquat, Megerditch Kiledjian, 2011-09-02 Specific complexes of protein and RNA carry out many essential biological functions including RNA processing, RNA turnover and RNA folding as well as the translation of genetic information from mRNA into protein sequences. Messenger RNA mRNA decay is now emerging as an important control point and a major contributor to gene expression. Continuing identification of the protein factors and cofactors and mRNA instability elements responsible for mRNA decay allow researchers to build a comprehensive picture of the highly orchestrated processes involved in mRNA decay and its regulation. Covers the nonsense mediated mRNA decay NMD or mRNA surveillance pathway. Expert researchers introduce the most advanced technologies and techniques. Offers step by step lab instructions including necessary equipment and reagents.

Complex Enzymes in Microbial Natural Product Biosynthesis, Part A: Overview Articles and Peptides, 2009-04-10 Microbial natural products have been an important traditional source of valuable antibiotics and other drugs but interest in them waned in the 1990s when big pharma decided that their discovery was no longer cost effective and concentrated instead on synthetic chemistry as a source of novel compounds often with disappointing results. Moreover understanding the biosynthesis of complex natural products was frustratingly difficult. With the development of molecular genetic methods to isolate and manipulate the complex microbial enzymes that make natural products unexpected chemistry has been revealed and interest in the compounds has again flowered. This two volume treatment of the subject will showcase the most important chemical classes of complex natural products: the peptides made by the assembly of short chains of amino acid subunits and the polyketides assembled from the joining of small carboxylic acids such as acetate and malonate. In both classes variation in sub unit structure number and chemical modification leads to an almost infinite variety of final structures accounting for the huge importance of the compounds in nature and medicine. Gathers tried and tested methods and techniques from top players in the field. In depth coverage of ribosomally synthesised and Non ribosomally synthesised peptides. Provides an extremely useful reference for the

experienced research scientist *Imaging and Spectroscopic Analysis of Living Cells* P.
