Quevauviller,1998-07-21 Water can be considered as one of the basic elements supporting life and the natural environment a primary component for industry a consumer item for humans and animals and a vector for domestic and industrial pollution Various European Directives already provide a framework for the control of aquatic substances the quality of bathing surface and drinking water and effluent control Such regulatory measures are closely related to analytical measurements In order to comply with these regulations on a permanent basis treatment plants and distribution companies as well as water users and polluters need to implement automated measuring techniques such as sensors and other analytical tools in continuous or sequential mode to obtain suitable alarm systems and facilitate the management of water resources and decision making processes This approach is in continuous evolution within the European Union In view of the consequences of wrong measurements it is vital that reliable quality control systems be achieved and maintained At present only a small range of analytical parameters can be measured automatically it is therefore necessary to develop and validate new methods to extend the list of parameters The development of new methodologies requires that the most recent know how in fields such as optics electrochemistry biochemistry chemometrics and others be shared by experts In order to identify possible actions to be undertaken in the field of standards measurements and testing for monitoring water quality the Standards Measurements and Testing SMT Programme of the European Union organised a European workshop that was held in Nancy 29 31 May 1997 This workshop brought together researchers and industrial users with the aim to make an overview of the present state of the art to consider possible improvements in existing techniques and the need and possibilities of developing new advanced technologies *Methods for Wastewater Characterization in Activated Sludge Modeling* Henryk Melcer,Water Environment Research Foundation,2003-01-01 **Chemical and Biological Characterization of Municipal Sludges, Sediments, Dredge Spoils, and Drilling Muds** James J.
