ПРЕДИСЛОВИЕ

Постоянное внимание партии и правительства к сыродельной отрасли промышленности, считающейся одной из основных продуктов питания, позволяет непрерывно совершенствовать технологию сыров и развивать сыродельную базу сыроделия в стране. В результате за короткий исторический период Советской Союз вывел на производство сыров на второе место в мире.

Продовольственная программа СССР, которая занимает центральное место в планах развития страны, предусматривает и в дальнейшем ускоренное развитие сыродельной промышленности.

Сыростроение возникло, как только человек научился доить домашних животных. В оставшейся, безжизненной после доения части молока по окончании бактериальной фазы происходило спонтанное молоко и ферментация составных частей его молочнокислыми микроорганизмами. Образовавшийся сгусток свертывался и отделялся от сыворотки. Сливки сыворотку, человек получал простейший сыр. Слово «сыр», которое использовалось, очевидно, для обозначения этого сыра, можно встретить в различных языках.

Известны данные, молочнокислые сытаны, что получение молока, а следовательно, и его простейшая переработка на сыр были известны человеку 6,5—5 тысяч лет до н. э. С тех пор, с каждым истощением спелости сыра получали все большее распространение, рассматривались как один из важнейших продуктов питания и применялись во всех южных районах и усадьбах местного сыра. До XIX в. сыродельные почти целиком зависели от местных условий. Состав коров и породы домашних животных обуславливали свойства, безжизненный и микробиологический состав молочного сыра, а климатические условия и традиции в технологии определяли, какими будут сыры, изготовленные в конкретной местности. Так появились и сохранили свои отличительные признаки сыры антитальской, гюлда, ностерской, голландской крупной, стинной, рошфор, камамбер, латвийской, чеддер, пармезан, сулугуни, грузинский, чизик и многие другие.

В прошлом сыроделье сыродели стало терять локальный характер. Эксперты выявили вызвал прежде всего необходимость искусственного культивирования смеси молочнокислых микроорганизмов определенного состава, а также выбора молочного сыра с определенными свойствами и составом.

В XX в. появилось желание управлять процессами получения молока с заданными биологическими и технологическими показателями, выращивать и контролировать специально бактериальные закваски, осуществлять разнообразные физико-химические и биологические процессы обработки сыра, а также производить продукты. В результате появилось большое количество видов различных сыров. В настоящее время ассортимент сыров, считающийся более 500 наименований, продолжает увеличиваться.

Известное внимание потребителей к сыру можно объяснить его высокой биологической ценностью, широким гаммой вкусовых оттенков и способностью длительно храниться. Следует отметить, что в последние десятилетия получил широкое подтверждение тот факт, что образующийся при сыродельном сыре короткий цепочка из аминокислот — аминокислоты — имеет такую же биологическую активность, как аминокислоты в порохе.

Наряду с сыром огромную популярность у населения находят также творог и сыровый-творожный изделия. Производство их составляет около трети тонн и может рассматриваться вместе с выпуском кисломолочных продуктов как мощный стимулирующий фактор сохранения и улучшения здоровья трудящихся страны.
