Metropolitan Problems Ibues Confronting New York And Tokyo:

Metropolitan Problems Tōkyō Shisei Chōsakai, 1992 Metropolitan Problems S. Miles, 2013-05-13 *Metropolitan Problems* is the end product of one of the most dynamic research programmes of its kind ever conceived and executed. The book, which took three years to complete, represents the culmination of a two-year study that was highlighted by a conference held in Toronto in 1967. In the early 1960s, the Bureau of Municipal Research in Metropolitan Toronto decided that a significant way for it to celebrate Canada's centennial would be to initiate a systematic international study of the world's metropolitan areas. The study, with the official cooperation of the United Nations, was designed to produce positive insights into the methods of coping with the interlocking sets of problems associated with the expansion of the modern metropolis. Twelve papers on various aspects of metropolitan problems were commissioned from an international body of experts. Working with these experts were study groups drawn from forty major metropolitan centres throughout the world. After making exhaustive studies of their respective urban centres, the groups reported their findings and submitted detailed briefs through their representatives at the conference. Throughout the symposium, a conscious effort was made to examine single aspects of social, economic, and physical change within the overall perspective of the metropolis. The book reflects this approach. Each chapter directs attention to specific problems of the metropolis, resulting from the contradiction between accelerating technology and our ability to cope with the incredible pace and rate of change. Together, they prove that despite differences in technology, culture, and political and social matters, the major urban areas of the world do have much in common. Emerging tendencies can be analysed, and corrective and preventative measures can be made through comparative analysis. This book was first published in 1970. Scaling Urban Environmental Challenges Peter J. Marcotullio, Gordon McGranahan, 2012-06-25 *Think globally, act locally* emphasizes the importance of scale in dealing with environmental challenges, but not how to factor it in. This major new book focuses on the spatial dimensions of urban environmental burdens, showing how important it is to take these into account when pursuing environmental justice and good governance, whether in the context of the sanitary risks of slum living, the pollution of uncontrolled industrialization and motorization, or the enormous ecological footprints of affluent urban lifestyles. Written by leading experts in the fields of urban development and environmental planning, the book reviews the urban environmental shifts that have shaped today's challenges and examines conditions and problems in the urban centres of low, middle, and high income countries. Case studies address such economically diverse cities as Accra, New Delhi, Mexico City, and Manchester, while thematic chapters explore issues including water, sanitation, and transportation. The book concludes by exploring and analysing different scales of governance. The editors argue that we should not rely solely on local governance to address local burdens like poor sanitation, nor depend only on global governance for global challenges such as greenhouse gas emissions, but that scale is crucial in both understanding the problems and devising successful responses. Development Harry W. Richardson, Chang-Hee C. Bae, 2006-03-30 Most research on globalization has focused on macroeconomic and economy wide consequences This book explores an under researched area the impacts of globalization on cities and national urban hierarchies especially but not solely in developing countries Most of the globalization urban research has concentrated on the global cities e g New York London Paris Tokyo that influence what happens in the rest of the world In contrast this research looks at the cities at the receiving end of the forces of globalization The general finding is that large cities on balance benefit from globalization although in some cases at the expense of widening spatial inequities

Challenges of Urban Mobility, Transport Companies and Systems Michał Suchanek, 2019-05-18 This proceedings volume examines individual city transports transport companies and entire transport systems Featuring select contributions presented at the 2018 TranSopot Conference in Sopot Poland this book provides an analysis of transportation solutions both at the micro level single city or single company as well as the macro level whole transportation systems The enclosed research and case studies provide a theoretical background for transport analysis but also new innovative and sustainable solutions to transportation while also increasing the efficiency of transport operations Transportation is a very specific area of social and economic life It creates countless opportunities and fulfills the need for mobility while also generating significant cost direct for the company or indirect to societies Planning and organizing transport is a task which requires a multi level approach with a focus on operational ecological and financial aspects At a time in which many transport systems are unable to grow extensively due to lack of space or increased cost these activities are even more crucial The enclosed research from researchers scholars and practitioners provides not only new theories but also empirical data and practical experience The TranSopot 2018 conference is a continuation of a long series of conferences devoted to the topic of transport sector development The goal of the conference is to exchange current trends and spread the results of current research into the fields of transport growth development and management
