## **New Design In Ceramics:**

**From Folk Art to Modern Design in Ceramics** Edna Mitchell, Robert Anderson, 2010-12-16 From the dusty workshops of village potters to the pristine assembly lines of modern factories from the makers of pottery to the producers of porcelain in selected areas of Mexico and Denmark the authors observed interviewed and photographed ceramic artists at their work The result is a story of persistence inspiration collaboration and intrigue success and failure along with individual eccentricities in the process of making ceramic art for an international market The story is not only that of the potters wheel but of the wheel of time over which the lowly village potter evolves as professional artist who eventually in some instances rejects making corporate porcelain in favor of returning to clay and kiln The Mexican communities are near Guadalajara The Danish settings include the towns of Naestved Srring the island of Bornholm and in Copenhagen the porcelain giants Royal Copenhagen and Bing and Grndahl contrasting large scale corporations with small pottery factories Researched in the 1970s the abandoned manuscript recently rediscovered appears here as written then with current material added to inform and update the historical ethnography providing a rare opportunity to follow up on people and predictions after thirty years to identify change decay and fulfillment *New design in ceramics* Donald J. **2nd European Symposium on Engineering Ceramics** F.L. Riley, 2012-12-06 This volume contains the proceedings of the 2nd European Symposium on Engineering Ceramics held in London 23 24 November 1987 The meeting was attended by almost 200 scientists and engineers primarily drawn from industry and the Sessions were chaired by Mr Eric Briscoe past President of the Institute of Ceramics Very effective symposium organisation was provided by IBC Technical Services Ltd The engineering ceramics are a class of materials which has over some 50 years found well established applications based on the materials chemical stability and wear resistance The last 20 years have seen intensified efforts to extend applications for these materials into areas traditionally occupied by metals but in which the typical metallic weaknesses of wear and of high temperature creep and oxidation are now creating significant problems These efforts have however in many cases been undermined on the one hand by the inherent ceramic weaknesses of brittleness and flaw sensitivity and on the other by an inadequate understanding and control of the basic ceramic fabrication processes required for the low cost mass production of relatively complex components The positive results of the efforts of the last 20 years have been the development of a large new group of ceramic materials believed to possess intrinsic mechanical property advantages of which the transformation toughened zirconias and the ceramic matrix composites are good examples together with improved powder production methods and powder shaping processes
