

NEW ENGINEERING CONTRACT (NEC)

Contractual partnering and collaborative working techniques are seen by many users in the construction industry as a key step forward. NEC3 is seen as being at the forefront of this style of working. The Hong Kong construction industry has typically followed traditional contract strategies. The local government has tracked the development of the NEC in the UK and is considering through various departments a series of pilot projects to introduce NEC3.

The Contracts

The NEC is a family of standard contracts currently in its third edition (June 2005) that embraces the concept of partnering and encourages the contracting parties to work together. The term NEC is a composite 'brand name' for a suite of contracts that includes:

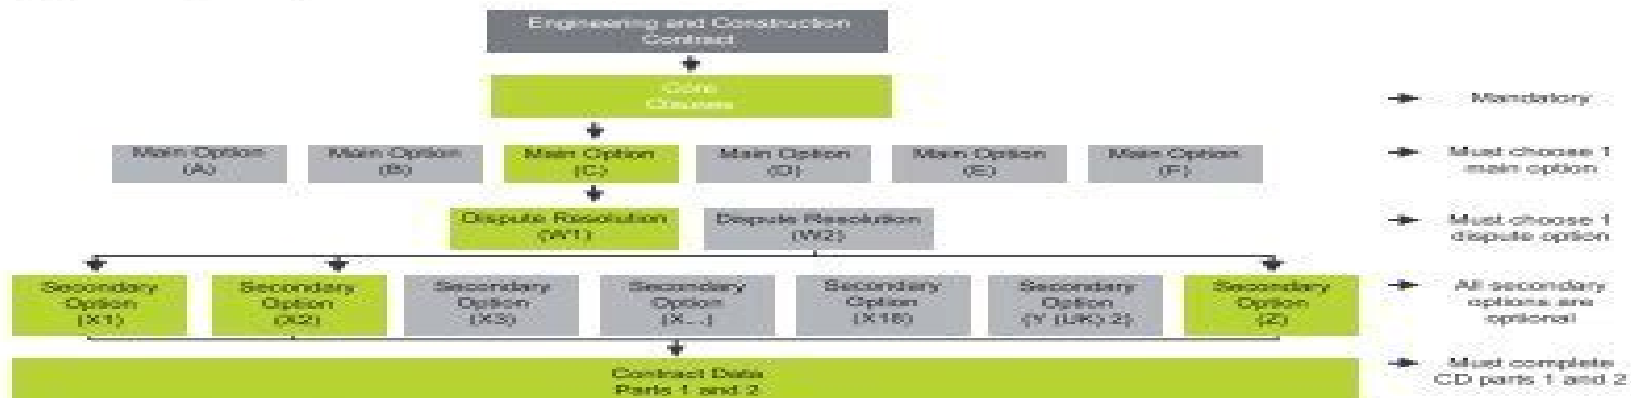

- The Engineering and Construction Contract (ECC)
- The Engineering and Construction Subcontract
- The Engineering and Construction Short Contract
- The Engineering and Construction Short Subcontract
- The Professional Services Contract
- The Term Service Contract
- The Supply Contract
- The Framework Contract
- The Adjudicators Contract

The NEC contract provides a legal framework as well as project management procedures which can be used on a

wide variety of construction and engineering projects. The principle characteristics of the NEC contract are flexibility, simplicity and a stimulus to good project management.

Flexibility

The ECC is the contract form used by an employer to engage a 'main' contractor. It is a flexible modular form of contract with a choice of six main options regarding pricing, risk allocation and payment mechanisms including lump sum, target cost and cost-plus. Most of the procedures based on the core clauses of the ECC are common to all main options. The ECC is then coupled with dispute resolution options and a series of 'secondary' options, which can be used to tailor the contract to suit project-specific requirements. Design responsibility can also reside with either party in whole or in part. The Contract Data introduces project particulars that maintains short and simple core clauses and provides specific relevant contract information.

New Engineering Contract:

The New Engineering Contract Arthur McInnis, 2001 The introduction of the New Engineering Contract NEC encourages a systematic approach to contracting which is multidisciplinary in nature and fully interlocked in form The NEC is intended by its supporters to be more flexible and easier to use than any current leading traditional standard forms of contract It is believed that these features reduce adversariality and disputes The NEC seeks to achieve this aim primarily through co operative management techniques and incentives built into the NEC s procedures This commentary analyses and evaluates these and related claims of innovation The New Engineering Contract A legal commentary examines the background to the NEC its design objectives structure procedures and likely judicial interpretation to determine whether it improves upon the traditional standard forms of contract Special attention is given in the commentary to the development and the significance of the principles underlying preparation of the NEC as well as the arguments in favour of and against them Throughout the detailed commentary upon the NEC clauses comparisons to the traditional forms are also made to highlight unique features and principles of general application The conclusion reached is that the NEC does make a significant contribution to the development of standard forms of contract addresses many of their short comings and offers one of the best models for their future development direction and design The commentary draws upon the body of the project management literature and legal analysis to support its conclusions The New Engineering Contract A legal commentary will be essential reading for lawyers barristers and solicitors as well as engineers and project managers
